2016-2017 RESIDENTIAL
UNDERGRADUATE CATALOG

Residential Undergraduate

Accounting

The Accounting faculty believes that competence in accounting is fundamental to good management. Recent events serve to reinforce this belief. This challenging major includes hands-on work experience in an accounting internship and prepares the student for a variety of careers in accounting. For those interested in "sitting" for the CPA exam, the College offers a one-year graduate master's program.

One of the hallmarks of New England College is the close working relationship between our faculty and our students. The Accounting faculty is highly motivated to help each student realize his or her full potential for success in the program.

Learning Outcomes

Students completing the Accounting program should be able to:

- Prepare and evaluate financial statements.
- Understand the role of the accountant in the organization and in society.
- Understand the impact of taxes on decision making and the statements.
- Understand the importance of costing processes in an organization.
- Understand and subscribe to the ethical code of conduct required by the accounting profession.
- Understand and implement internal control mechanisms within an organization.
- Remain accountable to the stakeholders of the organization for the accurate and fair presentation of the financial statements.
- Be prepared to take the certification exams in accounting (CPA, CMA, CFP, CIA).
- Use the experiential learning activities they had on campus with things like Quickbooks, H&R Block tax software, etc. to enhance their capabilities in their future job experiences.
- Understand the pronouncements as promulgated by the FASB, SEC, AICPA, etc. in facilitating corporate governance.

Experiential Learning Component:

The Business Department has felt strongly that an important component of the Accounting major would be a required internship. While we are not as concerned with the level of off-campus activity, it was decided that as long as the student gets one course credit (45 hours of work) for the internship, this would suffice.

Students have a wide variety of exciting opportunities for internship: one of our students worked on Wall Street for a major stockbrokerage firm; another student worked in a cost accounting capacity for a local hospital; another student worked for a nonprofit organization in Hillsboro that caters to individuals with autism in a capacity to use the accounting software, Quickbooks, to update their books of record.

Major

Accounting, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Accounting Core Courses

AC 2210 (BU 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the financial Accounting Standards Board, its predecessors, and the Security and Exchange Commission. *(4 Credits)*

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 2210/BU 2210. (4 Credits)*

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 3210 or permission of the instructor. (4 Credits)*

AC 3230 - Cost Accounting

A study of the concepts, procedures and tools associated with reporting financial data on performance to an organization's decision-makers. Emphasis is on the tools associated with planning, directing, and controlling an organization's activities, all with the goal of performance improvement. Topics include activity based costing, earned value management, and budgeting activities.

Prerequisites: AC 2220/BU 2220. Offered every other year. (4 Credits)

AC 3290 - Federal Taxation

A study of the composition of the federal tax law as applied to individuals. Topics include filing statuses, exemptions, basis calculations, capital gains and losses, sale of residences. An important component of the course will be the strategies the taxpayer can legally use to evade or postpone the payment of taxes. An introduction to the tax effects of organizing as a

proprietorship, partnership, or corporation will be presented. *Prerequisite:* AC 2210/BU 2210 or permission of the instructor. *Offered every other year. (4 Credits)*

AC 4910 - Internship in Accounting

Qualified students apply knowledge and theories gained in class to real accounting situations. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of an accounting faculty member. *Contract required. Variable credit (1-16)*

AC 5640 - Auditing & Assurance

This course introduces the student to the audit process, with emphasis on the perspective of management in a CPA firm, but with consideration to internal processes. Topics include implementing control procedures and assessments using both the compliance and management methods. Audit planning, staffing and training are considered. Special topics include enterprise risk management and auditing non-profit and public organizations.

Prerequisites: AC 3210, AC 3220. *Offered every other year. (4 Credits)*

Electives

Take one course from the following list:

AC 5620 - Government and Non-Profit Reporting

This course covers the environment of government/non-profit accounting and financial analysis, budgeting control, revenues and expenditures, accounting for capital projects, related account groups, and endowment management to include investments, accounting for business type and trustee activities, issues of reporting, disclosure, and non-profit organizations. *Prerequisites:* AC 3220. *Offered on a rotating basis. (4 Credits)*

AC 5630 - International Accounting

Under the current business environment all businesses, directly or indirectly, compete in the global marketplace. Understanding and awareness of international issues in accounting, therefore, is critical to the education of a well-rounded, competent business student. The International Accounting course provides an overview of and a platform for understanding and discussion of comparative accounting, theoretical as well as practical challenges posed by the global environment. Throughout the course, accounting issues unique to international business activities, are introduced and examined. The topics encompass presentation and probe of issues faced by contemporary global entities in the areas of auditing, Standards, external financial reporting, accounting systems, foreign currency transactions and translations, performance valuation, changes in price levels, controls, taxes and transfer pricing, as well as ethical, social, legal, and cultural considerations. *Prerequisites: AC 3210. Offered on a rotating basis. (4 Credits)*

AC 5730 - Accounting for Mergers and Acquisitions

This course focuses attention on all key stages of the M&A lifecycle including conception, planning, the first 100 days post-merger/acquisition, due diligence of intellectual property, and ongoing evaluation and improvement.. *Prerequisites: AC 3220. Offered on a rotating basis. (4 Credits)*

Related Courses Required for the Major

(4 courses, 16 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

BU 3920 - Business Law

An introduction to the nature of law and the judicial system as it affects business. Torts,

contracts, proprietorships, agencies, partnerships, and corporations will be considered. (4 Credits)

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status (4 Credits)

Strongly Recommended Course

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites:* BU 2110, BU 2210 (4 Credits)

Other Programs

Accounting Program Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

AC 2210 (BU 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the financial Accounting Standards Board, its predecessors, and the Security and Exchange Commission. (4 Credits)

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (2 Credits)

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. (4 Credits)

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

- Elective or Quantitative Literacy Requirement
- Elective

Second Year

Fall

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 2210/BU 2210. (4 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites:* MT 1020 or greater (4 Credits)

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Spring

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 3210 or permission of the instructor. (4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and

demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

- Elective *or*

BU 2110 - Quantitative Methods in Business

Art: Fine Arts Concentration and Media Arts Concentration

Program Description:

The art program provides majors with the opportunity to acquire a thorough knowledge and practice of the basic means of visual expression and a broad exposure to the history of art. Those who major in art acquire foundation preparation for professional or graduate study or for careers in teaching, museum work, and studio and commercial art.

Learning Outcomes

Students completing concentrations in FINE AND MEDIA ARTS will:

- Articulate the formal qualities of the various fine and media arts.
- Show competence in one or more areas of the fine or media arts
- Develop a cohesive body of work and articulate its concepts and methods of production
- Write creatively and critically about the arts and understand research methods and principles
- Read critically and interpret art historical texts and art criticism.
- Understand and articulate the interrelationship between the arts.
- Describe the fine and applied arts in relation to history and culture.
- Analyze, interpret, and evaluate their own and others art works.
- Apply the principles and concepts of the field(s) to new situations.

Experiential Learning Components - Required

At the course level: Studio Courses are immersive and experiential in nature. The studio classroom requires hands-on involvement in the practice and efforts toward mastery of various media resulting in a portfolio or body of work at the conclusion of each term. Singular and group critiques (both received and given) are a regular part of the studio pedagogy. Art History assignments are often project based, replicating museum or gallery practice, or reinforcing concepts crucial to developing the visual and discipline-based vocabulary essential to the study of art and visual culture.

Internships are strongly encouraged and can be substituted for a studio art or art history course at the intermediate (2000,3000) level.

CAPSTONE: 3 Courses (10 Credits)

Themes in Fine and Media Arts Topics (4 credits) is an interdisciplinary capstone class that allows students working in range of media and in both concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments encourages students to broaden their perspectives on art and art making. Emphasis is also placed on professional studio practice, skilled execution, and self-direction.

Senior Project (4 credits) consists of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. Students produce a minimum of six to ten presentation quality and/or exhibition ready works. The project usually culminates at the end of the senior year with an exhibition.

Professional Practices in Art (2 credits) provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. In addition to gallery, studio and museum visits, and practical assignments relating to a career as a professional artist, designer or curator, students expand their professional experience by applying for competitive exhibits or participating in internships, community involvement and other related visual arts opportunities. In addition, the Signature Experience for all majors is embedded in this course. Students spend 2-3 days together at an urban destination and visit galleries, artists' studios, museums, design and photography studios to gain an understanding of the profession.

Other Experiential Learning Opportunities - Not Required - Highly Recommended

Senior Exhibition (4 credits) focuses on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Working collaboratively, students organize and present an exhibition of the work they produced for their senior project.

Experiential Learning Opportunities at the Program Level:

Annual Student Art Exhibition: Student work from all courses is exhibited in the Chester Gallery (yearly Student Exhibition) and at the Simon Center gallery (on a regular basis). Students work is selected by faculty for inclusion in these exhibitions.

Fieldtrips: Students across the art curriculum participate in field trips to art museums and galleries through their art history courses, in combination with studio courses and as members of the Student Art Association. In addition, students visit artists' studios, or are visited by artists in the art and art history classrooms when appropriate.

Study Away opportunities: Short and long term- are strongly encouraged.

Foundation Review: All students participate in the Foundation Review which replicates the artist critique encountered in graduate school and at the professional level. This takes place in Spring semester of a student's second year, or after 20 credits in the major. It requires portfolio preparation with a written and oral statement before the entire Art faculty.

Gallery: Some students are involved beyond their regular course work in installation processes and related activities of the New England College Gallery. Work study opportunities are available as are internships.

Internships: Qualified students will be encouraged and invited to apply for competitive internships at local museums and galleries, including the Chester Gallery. Various offices on the NEC campus also provide photography and design internships.

Travel Opportunities (Immersion): Art faculty periodically lead college funded trips abroad during March break.

Major

Art Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses

First Year

Fall

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking

skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

LAS 2 (LAS 1120) - The Civic Environment - Democratic Values

An introduction to understanding the values and ideals of democratic thought and the challenges of pluralism.

In this seminar students will begin the work of how to understand the differences in human culture, values, customs, in the context of a shared humanity. With a focus on the civic environment this seminar works toward an understanding of diversity that strengthens an appreciation for democratic values and institutions as understood and articulated in The Universal Declaration of Human Rights. LAS 2 is designated as a writing-intensive General Education course. *(4 Credits)*

- Fine Arts or Media Arts Studio
- Elective

Second Year

Fall

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

MT 1100 - Quantitative Reasoning

The goal of this course is to develop students' ability to think critically about quantitative statements and information. In this course, students will have opportunities to evaluate the strengths and weaknesses of numerical evidence and logical arguments, to apply mathematical methods in the context of real-world problems, and to study and employ strategies and methods for how to manipulate, understand, analyze, and interpret quantitative information. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. *(4 Credits)*

- Fine Arts or Media Arts Studio
- Elective

Spring

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

Spring

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. (4 Credits)

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

- Art History (2 credits)

AR 4510 - Professional Practices in Art

Professional Practices is designed to provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. Students will be exposed to a variety of career and graduate school opportunities, and learn how to present themselves and their work in a professional manner. Written support materials, successful documentation of their visual product, visiting artist and art professional presentations, class lectures, research assignments and professional exercises will allow the student to acquire an expansive understanding of the professional artist's role and opportunities. Students will be expected to expand their professional experience through competitive exhibits, internships, community involvement and other related visual arts opportunities. *Prerequisites: 46 Credits Earned Offered every Fall. (2 Credits) Required course for all art majors.*

- Fine Arts or Media Arts Studio

Fourth Year

Fall

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

- Elective

Art: Fine Arts Concentration and Media Arts Concentration, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Core Introductory Courses

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of

visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments.

Offered every Fall. (4 Credits) Required of every art and communications major.

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

Core Capstone Courses

AR 4440 - Fine and Media Arts Topics

This interdisciplinary capstone class allows students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisites: 3000 level Fine Arts or Media Arts Course Offered each Fall. (4 Credits) May be repeated for credit. Required course for all art majors.*

AR 4510 - Professional Practices in Art

Professional Practices is designed to provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. Students will be exposed to a variety of career and graduate school opportunities, and learn

how to present themselves and their work in a professional manner. Written support materials, successful documentation of their visual product, visiting artist and art professional presentations, class lectures, research assignments and professional exercises will allow the student to acquire an expansive understanding of the professional artist's role and opportunities. Students will be expected to expand their professional experience through competitive exhibits, internships, community involvement and other related visual arts opportunities. *Prerequisites: 46 Credits Earned Offered every Fall. (2 Credits) Required course for all art majors.*

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

Art History Course Requirements

Select 8 credits from the following list:

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

AR 2230 (HS 2230) - History of American Art and Architecture

What is "American" about American art? How do the political, social and cultural events and ideals of an era shape the art and artists that emerge from it? This course will examine the visual culture of the United States from the colonial period through the early twentieth century. We will study art and architecture made in America as a reflection of its social, political, economic and cultural values. *Seven week course. Offered every fourth year. (2 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. (4 Credits) *Strongly recommended for all art majors. Fulfills LAS6 requirement.*

AR 3110 - Themes in Modern Art

A study of major movements and artists in Europe from 1860 to 1940, and in America from 1940-1970s. Emphasis is on significant artists, art theories and visual images as a reflection of, and reaction to, changes in modern civilization. *Offered every Spring. (2 Credits) Seven week course.*

AR 3120 - Themes in Photography

This course covers a broad historical survey of photography as we study the major artists and innovations of the medium of photography and its impact on art and society. We will learn the vocabulary of photography and study the technical innovations that have led us to the digital image of today. Students will learn to evaluate and discuss a wide range of photographs as documents, as aids to artistic production and as art works. *Offered every Spring. (2 Credits) Seven week course.*

AR 3220 - Renaissance Art

This course surveys the painting, sculpture and architecture produced in Italy and in Northern Europe from approximately the thirteenth through sixteenth centuries, situating the art within a discussion of its social and artistic contexts. The Humanism of Renaissance Italy and its connection to the art and culture of antiquity will serve as focal point for an exploration of civic responsibility and its expression in art and architecture. *Offered every four years. (2 Credits) Seven week course.*

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites:* AR 2520 or AR 1240/CO 1240. *Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4810 - Directed Study in Art or Art History

Course of study to be arranged between faculty and student in the field of Art. *Variable credit, depending on contract. Permission of instructor required Variable credit: 1-4 May be repeated for credit.*

AR 4910 - Internship/Apprenticeship in Art/Art History

Students who meet requirements for admission to the College Internship Program may acquire practical experience in a variety of settings (e.g. artists' studios, museums, commercial galleries, art organizations) under the supervision of a qualified professional and a member of the art faculty. *College requirements for eligibility for intership met. Variable credit: 1-16 May be repeated according to college guidelines. Only 4 credits may be substituted for studio art or art history requirement. Permission of advisor and appropriate faculty member required.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites: 8 credits at 3000 level Studio Art or Art History. Variable Credit: 1-4 Credits May be repeated for credit with different topics.*

Fine Arts Concentration Requirements

Select 16 credits from the following list:

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. (*Credits 2-4*) *Various topics may be repeated for credit.*

AR 2120 - Intro to 3-D Design & Sculpture

A Studio course dealing with the fundamentals of three-dimensional design and sculpture. This course will help students develop an understanding of the interaction of forms in nature and space. Students will explore and examine basic and common approaches used for integrating disparate parts into a cohesive whole. *Offered every Spring. (4 Credits)*

AR 2612 - Painting I

This course is an introduction to the fundamentals of oil painting. The course will emphasize observation and use of color, technical control, and expressive use of the oil painting medium. *Prerequisites: AR 1610. (4 Credits)*

AR 2314 - Printmaking Studio I

This course is designed to introduce the student to a wide variety of traditional and non-traditional printmaking processes including relief (lino and woodcut, collagraph), intaglio (drypoint and etching) and monotype. Comprehension of techniques and materials and their relationship to the printed image and visual concepts will be emphasized. *Prerequisites: AR 1610. Offered every Spring. (4 Credits)*

AR 2610 - Drawing Studio I

Students will investigate meaning and content in drawing by exploring a range of themes and various modes of drawing. While continuing to consolidate fundamental drawing skills, students will develop the techniques needed for effective visual expression in one or more drawing media. Course components may include study of the human figure, nature studies, the landscape, narrative drawing, imaginative and conceptual approaches to image making. Assignments may range from daily sketchbooks to completed series of works, research to develop both content and

imagery and the research of the relevant work of contemporary artists and historical works of art. *Prerequisites:* AR 1610. *Offered every Fall. (4 Credits)*

AR 3511 - Sculpture / 3D Design II

A continuation of the concepts introduced in AR2120 Sculpture / 3D Design I with an emphasis on aesthetic and expressive concerns of sculpture, emphasizing the basic forming processes: modeling, building, casting and carving. *Prerequisites:* AR 2120. *Once every 2 years. (4 Credits)*

AR 3612 - Painting II

A course designed to strengthen the fundamental skills of oil painting introduced in Painting Studio 1. Students will be encouraged to explore personal imagery and style. *Prerequisites:* AR 2612. *(4 Credits)*

AR 3313 - Printmaking II

This course introduces more advanced techniques and skills of printmaking as a fine art medium. Includes developing a deeper understanding of visual concepts as they relate to prints. Students are encouraged to work in a variety of print processes and processes in combination. *Prerequisites:* AR 2314. *Offered every other Spring. (4 Credits)*

AR 4650 - Structured Studio

This advanced course offers students the opportunity to utilize the skills acquired in their discipline of choice to gain further technical competency while applying these skills to a series of structured assignments that allow them to develop conceptually and discover their personal artistic voice. Students are expected to be more self-directed and take initiative as they address idea-based, generative exercise assignments to create portfolio ready work. Students will need to conceptually defend their work orally and in written form to successfully complete this course. *Prerequisites:* Studio courses in the discipline of choice at the 2000 and 3000 level. *(4 Credits)*

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites:* AR 2520 or AR 1240/CO 1240. *Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4810 - Directed Study in Art or Art History

Course of study to be arranged between faculty and student in the field of Art. *Variable credit, depending on contract. Permission of instructor required Variable credit: 1-4 May be repeated for credit.*

AR 4910 - Internship/Apprenticeship in Art/Art History

Students who meet requirements for admission to the College Internship Program may acquire practical experience in a variety of settings (e.g. artists' studios, museums, commercial galleries, art organizations) under the supervision of a qualified professional and a member of the art faculty. *College requirements for eligibility for intership met. Variable credit: 1-16 May be repeated according to college guidelines. Only 4 credits may be substituted for studio art or art history requirement. Permission of advisor and appropriate faculty member required.*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites: 8 credits at*

3000 level Studio Art or Art History. Variable Credit: 1-4 Credits May be repeated for credit with different topics.

Fine Arts Concentrates

Select one course (4 credits) from the list of Media Arts courses.

Media Arts Concentration Requirements

Select 16 credits from the following list:

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

AR 2414 - Graphic Design I

This course builds on skills acquired in the Design Fundamentals course. It focuses on the elements and principles of graphic design with an emphasis on visual communication. Design concepts and use of graphic elements as a communication tool will be explored. Students will be introduced to the basic concepts of visual communication through a series of projects that pertain to conceptual development, design tools and techniques. *Prerequisites: AR 1110. Offered every Fall. (4 Credits)*

AR 2710 - Photography II

Building on the skills acquired in Introduction to Photography, students will learn more advanced image capture and processing techniques to produce a professional style portfolio of work. Students will also survey various avenues for photography as a profession ranging from studio lighting, portraiture, photo-illustration as well as fine art photography. A digital Single Lens Reflex camera with a minimum of a 10 mega-pixel image sensor is a requirement for this class. *Prerequisites: AR 1710. (4 Credits)*

AR 3414 - Graphic Design II

A graphic design course covering a wide range of design processes and approaches to publication design. Students will expand their vocabularies in visual communication and explore the principles of design as they relate to layout, composition and production. *Prerequisites: AR 2414. Offered every Spring. (4 Credits)*

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites: AR 2520 or AR 1240/CO 1240. Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4650 - Structured Studio

This advanced course offers students the opportunity to utilize the skills acquired in their discipline of choice to gain further technical competency while applying these skills to a series of structured assignments that allow them to develop conceptually and discover their personal artistic voice. Students are expected to be more self-directed and take initiative as they address idea-based, generative exercise assignments to create portfolio ready work. Students will need to conceptually defend their work orally and in written form to successfully complete this course. *Prerequisites: Studio courses in the discipline of choice at the 2000 and 3000 level. (4 Credits)*

AR 4810 - Directed Study in Art or Art History

Course of study to be arranged between faculty and student in the field of Art. *Variable credit, depending on contract. Permission of instructor required Variable credit: 1-4 May be repeated for credit.*

AR 4910 - Internship/Apprenticeship in Art/Art History

Students who meet requirements for admission to the College Internship Program may acquire practical experience in a variety of settings (e.g. artists' studios, museums, commercial galleries, art organizations) under the supervision of a qualified professional and a member of the art faculty. *College requirements for eligibility for intership met. Variable credit: 1-16 May be repeated according to college guidelines. Only 4 credits may be substituted for studio art or art history requirement. Permission of advisor and appropriate faculty member required.*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites: 8 credits at 3000 level Studio Art or Art History. Variable Credit: 1-4 Credits May be repeated for credit with different topics.*

CO 3210 - Video Production I

Students learn basic strategies of shooting, sound recording and editing digital video to create short quality productions. Through hands-on experience and learning from professional video

analysis, you will be able to understand and practice the fundamental elements of this ultimate communication tool. Video production is rarely a solo endeavor so you will learn the ins-and-outs of a production team and will take on all necessary roles. A video camera or still camera with video capacity is suggested but not required. *(4 Credits)*

CO 3220 - Video Production II

Building on the skills acquired in Video Production I, students learn advanced strategies for shooting, sound recording and digital editing. A greater emphasis will be made on lighting and sound editing in order to acquaint you with industry standards. The two central projects will cover a broad range of skills. The first, an art-based project that will explore alternative narrative and expression. The second, a documentary-based project will hone your skills in this reality-based genre that nevertheless requires the abilities of a consummate storyteller. A video camera or still camera with video capacity is strongly suggested. *Prerequisites: CO 3210. (4 Credits)*

Media Arts Concentrates

Select one course (4 credits) from the list of Fine Arts courses.

Foundation Review

* In order to continue in the major, all studio art majors are required to submit portfolios of work from all art courses for review by the art faculty by the end of their second year in the program (fall of Junior Year for Junior year transfer students). The purpose of the Foundation Review is to identify, early in the student's career, potential strengths and weaknesses, to provide students with an opportunity to solicit opinions from and exchange ideas with professors outside their areas of emphasis and to assist the student in clarifying goals. Students must participate in and pass the Foundation Review in order to continue in the major.

Other Programs

Fine Arts Concentration - Suggested Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

Note:

ALL COURSES ARE 4 CREDITS EXCEPT WHERE NOTED

First Year

Fall

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

- LAS 1010 (LAS 1)

Core Requirement

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

Core Requirement:

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

- Quantitative Literacy Requirement

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

Required

AR 4440 - Fine and Media Arts Topics

This interdisciplinary capstone class allows students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisites: 3000 level Fine Arts or Media Arts Course Offered each Fall. (4 Credits) May be repeated for credit. Required course for all art majors.*

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

- Electives (6 credits)

Spring

Required

AR 4444 - Fine and Media Arts Topics II

This second of a pair of interdisciplinary capstone classes allow students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisite: AR 4440 (4 Credits)*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

- Electives (10 credits)

Media Arts Concentration - Suggested Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

Note:

ALL COURSES ARE 4 CREDITS EXCEPT WHERE NOTED

First Year

Fall

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

- LAS 1010 (LAS 1)

Core Requirement

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

Required

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

Core Requirement

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A

digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

- Quantitative Literacy Requirement

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Core Requirement

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

Choice of course

Choice of course from Media Arts Concentration at Studio I level

- Elective (4-6 credits)

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

Core Requirement

AR 2120 - Intro to 3-D Design & Sculpture

A Studio course dealing with the fundamentals of three-dimensional design and sculpture. This course will help students develop an understanding of the interaction of forms in nature and space. Students will explore and examine basic and common approaches used for integrating disparate parts into a cohesive whole. *Offered every Spring. (4 Credits)*

Choice of course

Choice of course from Media Arts Concentration at Studio I or II

- Elective (4-6 credits)

Third Year

Fall

- LAS 2130 (LAS 5)

Choice of course

Choice of course from Media Arts Concentration at Studio I or II level

Required

AR 3110 - Themes in Modern Art

A study of major movements and artists in Europe from 1860 to 1940, and in America from 1940-1970s. Emphasis is on significant artists, art theories and visual images as a reflection of, and reaction to, changes in modern civilization. *Offered every Spring. (2 Credits) Seven week course.*

AR 3120 - Themes in Photography

This course covers a broad historical survey of photography as we study the major artists and innovations of the medium of photography and its impact on art and society. We will learn the vocabulary of photography and study the technical innovations that have led us to the digital image of today. Students will learn to evaluate and discuss a wide range of photographs as documents, as aids to artistic production and as art works. *Offered every Spring. (2 Credits) Seven week course.*

Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

- Elective (10 credits)

Biology

The two main goals of the Biology majors are

1. to prepare majors for graduate education and/or careers in the biological sciences, and
2. to inform students of the methods of science as a tool for understanding the natural world.

Students will study the structure and function of living systems, spanning the range of biological scale from cells to organisms to ecosystems. Through a combination of lectures, extensive laboratory investigations, field work, and opportunities beyond the school, majors study the processes that occur in the natural world and their practical applications.

Recent graduates from our department have successfully entered and completed many graduate and professional degree programs (including ones in conservation biology, environmental engineering, science education, and forensics science) and are employed as scientists and state biologists.

All students in the Biology program begin their training with a common set of core classes that include introductions to biology, chemistry, physics, and math. As a student progresses through this core, in consultation with his or her faculty advisor and the department faculty, they will select a major:

1. B.S. in Biology for students interested in graduate school, careers in biological research, or a broad training in the biological sciences, or
2. B.S. in Health Science for students interested in a career in the health and medical field. See Health Science program of the catalog for details on that major. Each of these majors has a set of courses and electives designed to prepare students for their chosen area of interest.

Learning Outcomes

Students completing the Biology major should be able to:

- Know, understand and apply a broad range of basic biological concepts.
- Master applied laboratory skills.
- Apply mathematics to the field (i.e., statistical analysis).
- Understand the process of science and basic assumptions in the discipline.
- Think critically when reading and writing about research in the field.
- Generate hypotheses, design approaches to test them, and interpret data to reach valid conclusions.
- Communicate knowledge in an effective oral presentation.
- Demonstrate the ability to organize and write quality reports in the sciences.
- Demonstrate the ability to work effectively and responsibly with others.
- Demonstrate adherence to accepted standards of professional and ethical behavior.

As part of the Senior Thesis all majors are required to conduct their own research projects under the guidance of the Biology faculty. Students are also encouraged to engage in more extensive research projects throughout their time in the major. New England College is located in a pristine natural setting with diverse terrestrial and aquatic habitats that are available for research and field studies. In addition, on-campus facilities and equipment as well as off-campus affiliations are available for student research.

Biology majors encouraged, to participate in internships and/or volunteer to further their career and personal development. There are numerous local internship and volunteers opportunities in private, state, and federal agencies, as well as non-profit organizations.

Any two modules of General Biology (BI 1111-BI 1114) will satisfy the LAS 2130 requirement for students majoring in Biology, Health Science, and Kinesiology.

The Sophomore Review

Upon completion of BI 1111 - General Biology - Biodiversity, Evolution and Ecology to BI 1114 - General Biology - Cellular Biology and CH 2110 - General Chemistry I, all Biology majors will meet with the Biology faculty advisors. The purpose of this review is to identify,

early in the student's career, potential strengths and weaknesses, to assist the student in clarifying his or her goals and to advise the student on an appropriate course of study.

Experiential Learning Component

For a science major, the act of doing science is fundamental to fully integrating the content contained in courses. Most of the courses in this major have a laboratory component that stresses experiential learning in the field and/or in the laboratory. These experiences include activities that range from a single laboratory session to an entire year (in the case of Senior Thesis).

Furthermore, several classes include a public presentation component that is either done in the NEC community or even at professional scientific conferences. External funding, such as the current IDeA Network of Biological Research Excellent [NH-INBRE] grant, also facilitates infusion of research into the curriculum, as well as providing research opportunities outside of standard coursework. These research experiences can range from a few hours of work in the lab each week to intensive 10-week long summer research experiences.

Major

Biology, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Grades of C- or better are required in all courses needed for the Biology major, including chemistry, mathematics and physics.

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). Offered every Fall. (2 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems). Laboratory work involves animal anatomy and dissection. Offered every spring (2 Credits)

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites:* BI 1111-BI 1112. Offered every other Fall. (4 Credits)

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation. *Prerequisites: MT 1510. (4 Credits)*

Plus one of the following organismal level courses:

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC

greenhouse and those collected in the field from local natural areas. *Prerequisites:* BI 1111-BI 1112. *Offered in odd falls. (4 Credits)*

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs. (4 Credits)*

Plus one of the following micro-level courses:

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls. (4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

Plus 4 of the following courses

(ones not taken above)

BI 1020 - Foundations of Nutrition

An introduction to the basic concepts of nutrition, their application to the functions of carbohydrates, fats, proteins, minerals, and vitamins; the function and role of nutrients on health; and identification of substances in the diet which may adversely affect the body. *Offered every spring. (4 Credits)*

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall. (4 Credits)*

BI 2040 - Human Anatomy & Physiology II

This is a continuation of BI 2030, Human Anatomy and Physiology I. This course concludes discussion of organ systems in humans, including the senses, hormonal control, and the integumentary, immune, digestive, urinary, and reproductive systems. *Prerequisites:* BI 1113-BI 1114. *Offered every spring. (4 Credits)*

BI 2070 ES 2070 - New England Natural History

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites:* BI 1111-BI 1112 or ES 1110 *Offered in odd falls. (4 Credits)*

BI 3020 - Comparative Animal Physiology

This course examines the functioning of body systems in a wide range of animal groups. Covered topics include nervous and hormonal control systems, cardiovascular physiology, respiration, water balance/regulation, and muscle physiology. The laboratory consists of a self-

designed, semester-long set of experiments, culminating in a scientific presentation.

Prerequisites: BI 1111-BI 1114, CH 2110. *Offered in odd springs. (4 Credits)*

BI 4020 - Evolution

The theory of evolution is the intellectual glue that bonds all the sub-disciplines of biology into a coherent system. The goal of this seminar/reading course is to introduce students to major topics of evolutionary theory. Examined, among other items, are origins of specific adaptations, co-evolution, sex ratios, sexual selection, speciation rates, the origin of life, and major events in the evolution of organisms. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

BI 4910 - Internship

Students are encouraged to seek internships in area hospitals, research facilities, nonprofit organizations, environmental educational facilities, and field studies. Students should work with a faculty sponsor to develop an internship in their area of interest. *A contract is required.*

Variable credit (1-16) May be repeated for credit

CH 3310 - Organic Chemistry I

A study of carbon compounds by functional groups including the correlation of chemical and physical properties with structure, reaction mechanisms, and methods of synthesis. The laboratory portion emphasizes the microscale techniques. *Prerequisites:* CH 2120. *(4 Credits)*

CH 3320 - Organic Chemistry II

A continuation of CH 3310 - Organic Chemistry I. A study of additional functional groups and spectroscopy including IR, UV-VIS and NMR. *Prerequisites:* CH 3310 *(4 Credits)*

CH 3330 - Biochemistry

This course explores the roles of essential biological molecules focusing on proteins, lipids and carbohydrates. Students examine the structure of proteins, their function, and their association

with other molecules. Protein purification and enzyme kinetics will be explored in the laboratory.

Prerequisites: CH 3310. (4 Credits)

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration.

Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement.

Prerequisites: C- or better in MT 1510 Offered every year. (4 Credits)

PH 2220 - General Physics II

A continuation of PH 2210. Topics include optics, thermal physics, electricity and magnetism, waves (especially sound, and light), and nuclear physics. Laboratory work emphasizes data collection, analysis, and interpretation. *Prerequisites:* PH 2210. (4 Credits)

Minor

Biology Minor

- Description and Learning Outcomes

Requirements

A minor in Biology will consist of the following courses:

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical

cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). Offered every Fall. (2 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. Offered every spring (2 Credits)

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

- And at least 16 credits of additional biology courses.

Other Programs

Biology Suggested Sequence of Courses

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to

evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. (4 Credits)

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). Offered every Fall. (2 Credits)

- Math as determined by MPA

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and

religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) *Offered every spring (2 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

- Bio or a general elective

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC greenhouse and those collected in the field from local natural areas. *Prerequisites: BI 1111-BI 1112. Offered in odd falls. (4 Credits)*

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites: BI 1111 -BI 1114. Offered in even falls. (4 Credits)*

- Bio elective

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution

of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs. (4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- Bio elective

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester. (4 Credits)*

Third Year

Fall

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the

performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation.

Prerequisites: MT 1510. (4 Credits)

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC greenhouse and those collected in the field from local natural areas. *Prerequisites:* BI 1111-BI 1112. *Offered in odd falls.* (4 Credits)

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls.* (4 Credits)

- Bio elective

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide

opportunities to collect and analyze data from field and lab. *Prerequisites:* BI 1111-BI 1112.
Offered every other Fall. (4 Credits)

Spring

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

BI 3020 - Comparative Animal Physiology

This course examines the functioning of body systems in a wide range of animal groups. Covered topics include nervous and hormonal control systems, cardiovascular physiology, respiration, water balance/regulation, and muscle physiology. The laboratory consists of a self-designed, semester-long set of experiments, culminating in a scientific presentation.
Prerequisites: BI 1111-BI 1114, CH 2110. *Offered in odd springs. (4 Credits)*

BI 4020 - Evolution

The theory of evolution is the intellectual glue that bonds all the sub-disciplines of biology into a coherent system. The goal of this seminar/reading course is to introduce students to major topics of evolutionary theory. Examined, among other items, are origins of specific adaptations, co-evolution, sex ratios, sexual selection, speciation rates, the origin of life, and major events in the evolution of organisms. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- Bio elective

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution

of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114.
Offered in even springs. (4 Credits)

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- Bio elective
- LAS elective

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an

academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

- Bio or a general elective

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites:* BI 1111-BI 1112. *Offered every other Fall. (4 Credits)*

Business Administration

At New England College, entrepreneurship isn't just an academic discipline; it is a way of life. Our knowledgeable faculty are acquainted with the interdisciplinary value of entrepreneurship and integrate it throughout our curricular and co-curricular programs. The skills learned in our business and management classes are vital for the success of any business -- large or small, local or global, public or private, corporate or not-for-profit.

New England College students learn to recognize, create opportunities, and build the infrastructure to create economic and social value. Our students learn to evaluate viability and drivers of opportunities, develop feasible business models, and take action. We teach both analytical and creative approaches to all aspects of launching, growing, and expanding businesses and organizations. Our entrepreneurship curriculum provides a broad skill-set for business and also provides highly customized paths for a variety of business contexts, including new ventures, socially responsible companies, and family owned businesses. We focus on the creation of social and economic value by developing core capabilities of idea generation, opportunity recognition, acquiring resources, and entrepreneurial management. The skills and competencies gained in the business program at New England College are vital for the success of any business or organization including promising start-ups, corporations, family businesses, nonprofits, or any other setting. Business students will apply the entrepreneurial thought process both academically as well as in real world settings.

Learning Outcomes

The New England College Business Program seeks to guide and develop students into becoming honest, hard-working and thoughtful contributors to the maximization of owners' wealth in businesses and public good in not-for-profit foundations, mindful of the needs and objectives of all organizational stakeholders and in careful consideration of ecological sustainability.

Accordingly, the Business faculty seek to develop students' abilities to:

- Conduct themselves and their business to high ethical and professional standards
- Write and communicate effectively
- Problem-solving and the ability to work effectively in teams
- Employ numerical analysis and accountancy in support of decision-making and problem-solving
- Employ technology in pursuit of organizational objectives
- Be familiar with terminology and principles associated with: the legal, social and international environments of business, organizational behavior, management, marketing, finance, strategy, finance, macroeconomics and microeconomics, and information literacy.

Experiential Learning Component

- Community Engagement/Guest Speaker series with Concord Campus , and other local businesses
- Study Abroad opportunities (including "short-study abroad and "study-away" trips)
- Internships are highly encouraged (but not required)
- Close alignment with the Accounting and Sport and Recreation Management majors (sharing many core and elective courses) - encouraging interdisciplinary engagement
- Writing in the major will be emphasized using case study analysis, hands-on projects, and in-class exercises that engage students
- Group projects will encourage the concept of teamwork in a business setting
- Appreciation and enjoyment of nature and the natural setting encouraged through activities outside the classroom.
- Leadership opportunities and community engagement within coursework and local businesses

About the Associate Degree in Business Administration

Business administration is designed to provide each student with an overview of the foundations of management. With purposeful combination of basic management tools and elements from the liberal arts, students will be better prepared for entry level positions.

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule to meet individual interests and goals.

Major

Business Administration, A.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Twelve credits from the following list:

Note: Courses which are being used to fulfill discipline-specific requirements cannot count in the additional 12-credit requirement.

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

- LAS 2130

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing

context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

MT 1020 - College Algebra

This course is designed for students who need additional preparation for MT 1510 (Pre-calculus). The course will focus on the application of algebra to real world problems including introductory algebra topics such as: factoring polynomials, solving quadratic equations, graphing linear, quadratic, and other polynomial functions, rational functions, and solving systems of equations. Emphasis will be on conceptual understanding, learning in context, and solving real world problems using graphical, symbolic, and numeric representations. This course satisfies the Quantitative Literacy requirement *Offered every semester (4 Credits)*

4 credits from one of the following courses:

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation

problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. *(4 Credits)*

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making *(4 Credits)*

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and

appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

Twenty additional credits

Twenty additional credits taken from the following disciplines:

- Accounting
- Business
- Economics

General electives

General electives to complete 60-credit requirement.

Business Administration, Accounting, B.A.

- Description and Learning Outcomes
- Business Administration Suggested Course Sequence

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for

managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. *(4 Credits)*

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making *(4 Credits)*

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. *(4 Credits)*

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites: BU 2110, BU 2210 (4 Credits)*

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status *(4 Credits)*

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills,

both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (*4 Credits*)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (*4 Credits*)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (*4 Credits*)

Accounting

(*16 Credits*)

The accounting concentration is designed to provide a firm foundation in accounting. The Business Department believes that competence in accounting is fundamental to good management. Expertise will be gained which will open the possibilities for careers in private industry, governmental, or other nonprofit accounting entities. Students wishing to pursue professional certification are advised to meet with their advisor to develop a 4-year plan.

Required courses for the Accounting Concentration

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 2210/BU 2210. (4 Credits)

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 3210 or permission of the instructor. (4 Credits)

AC 3290 - Federal Taxation

A study of the composition of the federal tax law as applied to individuals. Topics include filing statuses, exemptions, basis calculations, capital gains and losses, sale of residences. An important component of the course will be the strategies the taxpayer can legally use to evade or postpone the payment of taxes. An introduction to the tax effects of organizing as a proprietorship, partnership, or corporation will be presented. *Prerequisite:* AC 2210/BU 2210 or permission of the instructor. Offered every other year. (4 Credits)

Plus One elective chosen from:

AC 3230 - Cost Accounting

A study of the concepts, procedures and tools associated with reporting financial data on performance to an organization's decision-makers. Emphasis is on the tools associated with planning, directing, and controlling an organization's activities, all with the goal of performance improvement. Topics include activity based costing, earned value management, and budgeting activities.

Prerequisites: AC 2220/BU 2220. Offered every other year. (4 Credits)

AC 3990 - Topics in Accounting

A changing selection of courses designed to offer a variety of enrichment studies in Accounting. *Offered on a rotating basis. (4 Credits) The course may be repeated for credit with different topics.*

AC 5620 - Government and Non-Profit Reporting

This course covers the environment of government/non-profit accounting and financial analysis, budgeting control, revenues and expenditures, accounting for capital projects, related account groups, and endowment management to include investments, accounting for business type and trustee activities, issues of reporting, disclosure, and non-profit organizations. *Prerequisites: AC 3220. Offered on a rotating basis. (4 Credits)*

AC 5630 - International Accounting

Under the current business environment all businesses, directly or indirectly, compete in the global marketplace. Understanding and awareness of international issues in accounting, therefore, is critical to the education of a well-rounded, competent business student. The International Accounting course provides an overview of and a platform for understanding and discussion of comparative accounting, theoretical as well as practical challenges posed by the global environment. Throughout the course, accounting issues unique to international business activities, are introduced and examined. The topics encompass presentation and probe of issues faced by contemporary global entities in the areas of auditing, Standards, external financial reporting, accounting systems, foreign currency transactions and translations, performance valuation, changes in price levels, controls, taxes and transfer pricing, as well as ethical, social, legal, and cultural considerations. *Prerequisites: AC 3210. Offered on a rotating basis. (4 Credits)*

AC 5640 - Auditing & Assurance

This course introduces the student to the audit process, with emphasis on the perspective of management in a CPA firm, but with consideration to internal processes. Topics include implementing control procedures and assessments using both the compliance and management methods. Audit planning, staffing and training are considered. Special topics include enterprise risk management and auditing non-profit and public organizations.

Prerequisites: AC 3210, AC 3220. Offered every other year. (4 Credits)

AC 5730 - Accounting for Mergers and Acquisitions

This course focuses attention on all key stages of the M&A lifecycle including conception, planning, the first 100 days post-merger/acquisition, due diligence of intellectual property, and ongoing evaluation and improvement.. *Prerequisites: AC 3220. Offered on a rotating basis. (4 Credits)*

BU 3920 - Business Law

An introduction to the nature of law and the judicial system as it affects business. Torts, contracts, proprietorships, agencies, partnerships, and corporations will be considered. *(4 Credits)*

Business Administration, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind.

Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (4 Credits)

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. (4 Credits)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (4 Credits)

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites:* BU 2110, BU 2210 (4 Credits)

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status (4 Credits)

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills, both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (*4 Credits*)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (*4 Credits*)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing , and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (*4 Credits*)

Required Courses for Marketing Concentration

(12 Credits)

The marketing concentration prepares students for careers in advertising, sales, marketing management and marketing research. This concentration focuses on developing strategies to meet the needs and wants of consumers.

Students select three courses from the following list:

BU 3410 - Personal Selling and Client Relationships

This course focuses on direct selling, one of the key elements of marketing promotion. Utilizing a variety of methods, this course provides students with the tools and skills necessary to build long-term relationships that result in successful sales outside a fixed retail location.

Prerequisites: BU 2220, BU 2510. *(4 Credits)*

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites.

Prerequisites: BU 2510. *(4 Credits)*

BU 3540 (SM 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and nonprofit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally, students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites:* BU 2510 *Offered every fall. (4 Credits)*

BU 3810 (CO 3810) - Advertising and Promotion

This course focuses on the need to advertise, the media, consumer motivation, creating the message, the use of agencies, the design and use of promotion techniques, and the organization and functions of a corporate advertising staff. *Prerequisites: BU 2510. (4 Credits)*

BU 3990 - Topics in Business

A changing selection of courses designed to offer a variety of enrichment studies in Business. Permission of Associate Dean or Accepted into MBA Program *(4 Credits) The course may be repeated for credit with different topics.*

BU 4515 - Enterprise Consulting and Development

This project-based course involves consulting to a specific enterprise and is designed to integrate the various functional areas of business. Students in this course will be expected to work independently and professionally. Senior status is preferred. *Prerequisites: BU 2510, BU 2210/AC 2210, BU 2220/AC 2220, BU 2410. (4 Credits) This course may be repeated with permission of the department.*

CT 2750 (CO 2750) - Website Design

This course will explore the information resources on the Web and the best tools to access these resources. It will also introduce students to publishing on the Web. Students will learn HTML (Hypertext Markup Language) and how to design and implement a website while enhancing SEO (search engine optimization) protocol. Students will review and analyze successful websites, design a simple website of their own, and will discuss the reasons websites are successful. Students will create web pages that focus on both the user's needs and the information requirements of content while producing a site that is easy to navigate and quick to download. *(4 Credits)*

Business Administration, Strategic Sales Management, B.A.

Business Administration, Strategic Sales Suggested Course Sequence

Sales and sales management professionals are in high demand, and long-term job growth prospects are strong. In addition to building a career in sales, the ability to communicate effectively, leverage evolving technology, and build strong relationships among customers and stakeholders are critical elements in almost any successful career. The art and science of selling is a highly marketable and transferable skill set - and a big competitive advantage for your career. Salesmanship is best developed through experience, so students will be exposed to the material through a variety of methods including mock sales scenarios, class projects, and case studies.

Because this concentration relies on graduate level courses as part of the undergraduate program, students wishing to concentrate in Strategic Sales Management must either be accepted into New England College's MBA - program or get permission from the Associate Dean of Management or the Dean of the Undergraduate Program in order to take MG 5360 and MG 6230.

BU 3410 - Personal Selling and Client Relationships

This course focuses on direct selling, one of the key elements of marketing promotion. Utilizing a variety of methods, this course provides students with the tools and skills necessary to build long-term relationships that result in successful sales outside a fixed retail location.

Prerequisites: BU 2220, BU 2510. *(4 Credits)*

MG 5360 - Technology and the Art of the Sale

With the growth of social media and the digital age customers now have unprecedented access to information, a new reality that is changing the way salespeople do their jobs. Salespeople must now shift the focus from "selling to serving" customers in order to provide the marginal value necessary to build customer loyalty. In this course students will review the psychology of sales from the perspective of this new reality, exploring how this has shaped buyer behavior. Students will learn how to successfully leverage technology to their advantage and negotiate a sale in this

constantly shifting environment. Emphasis will be placed on a range of likely sales venues, ranging from social media to a conference.

Permission of Associate Dean or Accepted into MBA Program *4 credits*

MG 6230 - Strategic Sales Management

This course provides students with the tools to develop, implement, and analyze a strategic sales plan. Students will learn how to recognize the strengths and weaknesses of forecasting techniques as well as how to hire and incent a sales force to achieve sales goals. Emphasis will be placed on identification of potential customers and the strategic allocation of resources to effectively reach those customers. Students will review Customer Relationship Management (CRM) Software as well as successful tools for sales negotiations. Eligible students can use the knowledge gained in this course to sit for the Certified Sales Executive exam.

Permission of Associate Dean or Accepted into MBA Program. *4 credits*

Plus:

Three additional business or economics courses, designated 2000+

Other Programs

Associate Degree in Business Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (*2 Credits*)

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and

writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. (*4 Credits*)

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. (*4 Credits*)

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. *(4 Credits)*

Spring

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the

seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Quantitative Literacy Requirement

Second Year

Fall

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (4 Credits)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing

functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (*4 Credits*)

MG 5360 - Technology and the Art of the Sale

With the growth of social media and the digital age customers now have unprecedented access to information, a new reality that is changing the way salespeople do their jobs. Salespeople must now shift the focus from "selling to serving" customers in order to provide the marginal value necessary to build customer loyalty. In this course students will review the psychology of sales from the perspective of this new reality, exploring how this has shaped buyer behavior. Students will learn how to successfully leverage technology to their advantage and negotiate a sale in this constantly shifting environment. Emphasis will be placed on a range of likely sales venues, ranging from social media to a conference.

Permission of Associate Dean or Accepted into MBA Program *4 credits*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. - Elective or Internship

MG 6230 - Strategic Sales Management

This course provides students with the tools to develop, implement, and analyze a strategic sales plan. Students will learn how to recognize the strengths and weaknesses of forecasting techniques as well as how to hire and incent a sales force to achieve sales goals. Emphasis will be placed on identification of potential customers and the strategic allocation of resources to effectively reach those customers. Students will review Customer Relationship Management (CRM) Software as well as successful tools for sales negotiations. Eligible students can use the knowledge gained in this course to sit for the Certified Sales Executive exam.

Permission of Associate Dean or Accepted into MBA Program. *4 credits*

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (*4 Credits*)

Chemistry

Communication Studies

Communication Studies examines the ways in which social meanings are produced through the creation, mediation, and reception of messages. Students may focus in Media Studies, Journalism, or Public Relations and Advertising, or devise their own area of concentration. This major offers both practical training in the use of media technologies and communication strategies, as well as critical and historical perspectives on media and communication. Students in this major learn to gather, analyze, organize, and present information in a clear and engaging fashion. In addition to course work, students may gain practical experience through the college newspaper, radio, commercial magazines, and professional internships.

Learning Outcomes

Upon completion of the Communications Studies program, students will be able to exhibit:

- Clear and effective writing skills
- Strong oral communication skills
- Strong interpersonal skills
- Strong intrapersonal skills
- Strong critical thinking skills
- Competent research abilities
- Media Literacy
- Ecological Literacy
- Engagement in experiential learning

Internships

Students are encouraged to consider an internship as part of their communication study at New England College. Internship opportunities exist in the areas of radio and television broadcasting, public relations, video production, new media, newspapers, for-profit and non-profit organizations.

Semester Abroad Recommendation

International affairs and first-hand knowledge of other cultures is increasingly significant to communication studies majors. We therefore recommend that students in the communication program consider taking one semester or more at a foreign study program offered by New England College. In the semester abroad program, students may fulfill some of their major requirements as well as general education requirements.

Experiential Learning Component

The Communication Studies Program provides experiential learning through participation in media professions such as journalism, public relations, advertising, video and radio production, and media practices such as video production, audio production/podcasting, social media, radio broadcasting, public speaking, and writing for journalism, PR, and advertising. The core immersion experience for many Communication Studies majors is contributing to *The NewEnglander*, NEC's college newspaper, and/or WNEC, the college radio station. PR and advertising students often work for campus organizations and events. An internship or practicum is also a requirement for the major.

Major

Communication Studies, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(40 Credits Total)

Students may not earn below a grade of C- in the required Core or Elective courses.

Communication Core Courses

CO 1010 - Introduction to Communication Studies

This introduction to communication study explores interpersonal theory, ethics, language and meaning, nonverbals, perception, questioning and listening, and public speaking. The course requires both individual and small group work in designing three presentations. *(4 Credits)*

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal, critical and contextual analysis that are crucial for those interested in a career in the arts, communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. *(4 Credits)*

CO 3410 - Freedom of Speech

Freedom of speech is a fundamental right guaranteed by the first amendment of the U.S. Constitution. As such, it operates as an ideal, principle, and guide. However, the actual practice

of this ideal, while codified into laws, is influenced by power, social inequality, and circumstance. This course surveys the ideal and actual practice of free speech. Particular attention is also paid to seminal court cases and ethical dilemmas that have shaped our views of freedom of the press. Topics explored in this course include Enlightenment rationality and freedom, democracy and citizenship, civil rights and dissent, media monopoly, free speech during wartime, and freedom in non-U.S. countries. (4 Credits)

CO 4430 - Senior Seminar

The senior seminar is designed to prepare students for life after college, giving them a deeper sense of who they are and what they have to offer to others in their personal, work, and community lives, as well as in their roles as citizens of the world. Practical skills like resume writing, searching for a job, and interviewing are also explored. *Prerequisites: 70 Credits Earned.* (4 Credits)

CO 4910 - Internship in Communication Studies

Internship and practicum opportunities exist in the areas of radio and television broadcasting, public relations, advertising, video production, new media, newspapers, and for-profit and non-profit organizations. *Variable Credit - (1-16)*

CO 4920 - Practicum in Communication Studies

Internship and practicum opportunities exist in the areas of radio and television broadcasting, public relations, advertising, video production, new media, newspapers, and for-profit and non-profit organizations. *Variable Credit - (1-16)*

Communication Electives

- A minimum of 20 elective credits with the CO designation.

Note:

Students wishing to incorporate relevant courses from other departments into their major should use the substitution waiver form.

Minor

Communication Studies Minor

- Description and Learning Outcomes

The Communication Studies minor consists of a minimum of 20 credit hours that show a balanced distribution between beginning and advanced courses. Depending on the choice of courses, a student may develop a minor focused on media studies, journalism, public relations and advertising, or some other combination of courses (radio, media criticism, public speaking, sport communication, etc.).

Requirements

(20 Credits)

- 8 credits with the 1000 and 2000 level CO course designation
- 8 credits with the 3000 and 4000 level CO course designation.
- 4 credits with a CO course Designation.

Other Programs

Suggested Course Sequence for Communication Studies Program

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the

course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal, critical and contextual analysis that are crucial for those interested in a career in the arts, communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. *(4 Credits)*

- Quantitative Literacy Requirement

CO 1010 - Introduction to Communication Studies

This introduction to communication study explores interpersonal theory, ethics, language and meaning, nonverbals, perception, questioning and listening, and public speaking. The course requires both individual and small group work in designing three presentations. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal, critical and contextual analysis that are crucial for those interested in a career in the arts,

communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. *(4 Credits)*

- Quantitative Literacy Requirement

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

- CO Elective

Second Year

Fall

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

CO 3410 - Freedom of Speech

Freedom of speech is a fundamental right guaranteed by the first amendment of the U.S. Constitution. As such, it operates as an ideal, principle, and guide. However, the actual practice of this ideal, while codified into laws, is influenced by power, social inequality, and circumstance. This course surveys the ideal and actual practice of free speech. Particular attention is also paid to seminal court cases and ethical dilemmas that have shaped our views of freedom of the press. Topics explored in this course include Enlightenment rationality and freedom, democracy and citizenship, civil rights and dissent, media monopoly, free speech during wartime, and freedom in non-U.S. countries. *(4 Credits)*

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding

answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. Computer Information Systems

Program Description:

This program is designed to prepare graduates to work in a variety of computer and data related fields. Students will build foundational knowledge in systems that are:

- a) within the requirements of budgetary constraints
- b) incorporate ethical and legal considerations
- c) meet specific organizational goals for customer service.

This degree path is designed to combine the benefits of a traditional liberal arts college education with the benefits of hands-on training in state-of-the-art computer technology. Through the core curriculum and the elective offerings graduates will be prepared to plan, design, and optimize scalable software systems and/or mobile applications for use in business environments. This degree is ideal for students who have a technical background and an interest in the theory, practice, art, and science of computer systems and programming.

Revisions to this degree path have been made since it was last listed as a major at NEC. Specifically, business management classes have been replaced with more technical computer technology classes. The intention is to create a more technical degree that explores a greater range of topics within computer information services with less focus on management.

Learning Outcomes:

Students who complete New England College's Bachelors of Science in Computer Information Systems should be able to:

- Apply communication, teamwork, and leadership skills to translate technical information that will help align computer information systems and tools with organizational goals.

- Analyze technical aspects of IT projects and apply project management strategies to meet business needs and organizational goals.
- Apply IT methods and tools to the development of applications and administration of computing system, as well as to the adoption of new technologies in the organization.
- Identify information tools and technologies that may have strategic value for the organization, and manage the implementation of those technologies.

Experiential Component:

This degree path utilizes hands-on training in state-of-the-art computer technology, helping students to build practical skills in the digital economy. Course curriculums are focused on developing these skill sets through relevant projects, so that students gather a thorough knowledge of the theory and technical aspects of a given subject area. In addition, students are encouraged but not required to pursue internships as part of the degree path. Ideas for a signature experience for the major are being discussed.

Major

Computer Information Systems, B.S.

Program Description

Learning Outcomes

Experiential Component

Major Requirements

(44 credits)

CT 1510 - Introduction to Programming Logic and Design

The course will provide the student with knowledge on the principles of programming logic and design. An emphasis will be placed on using the correct rules of program engineering, structure of data, basic algorithms and problem solving in computer programming. A hands-on approach will be used to conceptualize programming concepts and techniques. Additional importance will be placed on understanding the value of creating flowcharts or writing pseudo code and will include top-down program development using algebraic notation, standard control structures, and arrays in an appropriate programming language. The course stresses planning, building, coding,

testing, debugging and documenting program applications. Additional programming concepts covered include binary representation, storage, and general architecture and functioning of a computer system. *(4 Credits)*

CT 2430 (BU 2430) - Information Systems in Organizations

This course introduces students to how information technology is used in support of an organization's ongoing strategy development and implementation as well as to provide management with information regarding the organization's performance and in support of decision making. Students will learn about information technology support for customer relationship management, supply chain management, enterprise resource planning, and business intelligence as well as for streamlining operations and fostering innovation. Case studies about developing and implementing information systems will be analyzed for small, large, for profit, not for profit, bricks and mortar, and online organizations. Additionally, hands-on components of this course will focus intensively on current software used in a variety of business environments, preparing students for upper level courses and today's workforce. *(4 Credits)*

CT 2510 - Object Oriented Programming

This course covers topics in object oriented programming utilizing a variety of visual programming languages. Major topics include analysis and design, and use of object oriented programming techniques. A hands-on approach will be used to conceptualize programming modeling and techniques such as concepts in classes, inheritance, encapsulation, and abstraction. *Prerequisites: CT 1510 or Permission of instructor. (4 Credits)*

CT 6110 - IT Project Management

This course will examine various techniques used to manage complex projects in the context of overall organizational goals and strategy. The course will examine the roles of team members as well as the impact of team building, planning, scope management, time management, and budgetary constraints. A number to technical tools, e.g. GANTT and PERT charting will be examined. *Prerequisites: CT 2430 (4 credits)*

CT 4540 - Systems Analysis and Design

This course provides a methodical approach to developing computer systems including systems planning, analysis, design, testing, implementation and software maintenance. Emphasis is on the strategies and techniques of systems analysis and design for producing logical methodologies for dealing with complexity in the development of information systems. *Prerequisites: Junior standing. (4 Credits)*

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. *(4 credits)*

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

(CT5610 & CT5750 are offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Electives:

Choose three from the following list.

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites.

Prerequisites: BU 2510. (4 Credits)

CT 3740 - Java Programming

This course presents basic programming concepts using the Java programming language. Structured and object oriented programming techniques are presented and used to design and implement a variety of programming problems. *Prerequisites: CT 1510. (4 Credits)*

CT 3820 - Programming in C++

This course offers an introduction to the C++ programming language and provides an overview of programming concepts, design and an introduction to coding using the C++ language. The course has a focus on creating working computer programs in C++ and addresses fundamental concepts of analysis, design, testing, and code development. This course will prepare students for focused studies in any programming language. *Prerequisites: CT 1510. (4 Credits)*

CT 3990 - Topics in Computer Systems

A changing selection of courses offering a variety of specialized applications of computer technology and contemporary situations. *Prerequisites: Permission of instructor. (4 Credits)*
May be repeated for credit with different topics.

CT 4810 - Directed Study in Computer Information Systems

Course of study to be arranged between faculty and student(s) in the field of Computer Information Systems beyond regular course offerings. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract. May be repeated for credit.*

CT 4830 - Independent Study in Computer Information Systems

Advanced, independent study of a specific topic beyond regular course offerings. Course of study to be arranged with a faculty member. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract.*

CT 4910 - Internship in Computer Information Systems

Potential interns must meet the College-wide internship requirements and must be approved by the computer information systems faculty. An internship may be taken by qualified students on a semester, year, or summer basis. *Prerequisites: Permission of instructor, and junior/senior status. Variable credit (1-12), depending on contract.*

CT 4920 - Practicum in Computer Information Systems

The practicum is designed to provide the student with an experiential learning experience in an area within computer information systems based on interest and availability. The practicum can be completed either on- or off- campus. *Variable credit (1-12)*

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. *(4 credits)*

(CT6670 is offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Minor Requirements

(20 credits)

CT 1510 - Introduction to Programming Logic and Design

The course will provide the student with knowledge on the principles of programming logic and design. An emphasis will be placed on using the correct rules of program engineering, structure

of data, basic algorithms and problem solving in computer programming. A hands-on approach will be used to conceptualize programming concepts and techniques. Additional importance will be placed on understanding the value of creating flowcharts or writing pseudo code and will include top-down program development using algebraic notation, standard control structures, and arrays in an appropriate programming language. The course stresses planning, building, coding, testing, debugging and documenting program applications. Additional programming concepts covered include binary representation, storage, and general architecture and functioning of a computer system. *(4 Credits)*

Electives:

Choose four of the following:

CT 2430 (BU 2430) - Information Systems in Organizations

This course introduces students to how information technology is used in support of an organization's ongoing strategy development and implementation as well as to provide management with information regarding the organization's performance and in support of decision making. Students will learn about information technology support for customer relationship management, supply chain management, enterprise resource planning, and business intelligence as well as for streamlining operations and fostering innovation. Case studies about developing and implementing information systems will be analyzed for small, large, for profit, not for profit, bricks and mortar, and online organizations. Additionally, hands-on components of this course will focus intensively on current software used in a variety of business environments, preparing students for upper level courses and today's workforce. *(4 Credits)*

CT 2510 - Object Oriented Programming

This course covers topics in object oriented programming utilizing a variety of visual programming languages. Major topics include analysis and design, and use of object oriented programming techniques. A hands-on approach will be used to conceptualize programming modeling and techniques such as concepts in classes, inheritance, encapsulation, and abstraction. *Prerequisites: CT 1510 or Permission of instructor. (4 Credits)*

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites.

Prerequisites: BU 2510. (4 Credits)

CT 6110 - IT Project Management

This course will examine various techniques used to manage complex projects in the context of overall organizational goals and strategy. The course will examine the roles of team members as well as the impact of team building, planning, scope management, time management, and budgetary constraints. A number of technical tools, e.g. GANTT and PERT charting will be examined. *Prerequisites:* CT 2430 (4 credits)

CT 3740 - Java Programming

This course presents basic programming concepts using the Java programming language. Structured and object oriented programming techniques are presented and used to design and implement a variety of programming problems. *Prerequisites:* CT 1510. (4 Credits)

CT 3820 - Programming in C++

This course offers an introduction to the C++ programming language and provides an overview of programming concepts, design and an introduction to coding using the C++ language. The course has a focus on creating working computer programs in C++ and addresses fundamental concepts of analysis, design, testing, and code development. This course will prepare students for focused studies in any programming language. *Prerequisites:* CT 1510. (4 Credits)

CT 3990 - Topics in Computer Systems

A changing selection of courses offering a variety of specialized applications of computer technology and contemporary situations. *Prerequisites:* Permission of instructor. (4 Credits)
May be repeated for credit with different topics.

CT 4540 - Systems Analysis and Design

This course provides a methodical approach to developing computer systems including systems planning, analysis, design, testing, implementation and software maintenance. Emphasis is on the strategies and techniques of systems analysis and design for producing logical methodologies for dealing with complexity in the development of information systems. *Prerequisites: Junior standing. (4 Credits)*

CT 4810 - Directed Study in Computer Information Systems

Course of study to be arranged between faculty and student(s) in the field of Computer Information Systems beyond regular course offerings. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract. May be repeated for credit.*

CT 4830 - Independent Study in Computer Information Systems

Advanced, independent study of a specific topic beyond regular course offerings. Course of study to be arranged with a faculty member. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract.*

CT 4910 - Internship in Computer Information Systems

Potential interns must meet the College-wide internship requirements and must be approved by the computer information systems faculty. An internship may be taken by qualified students on a semester, year, or summer basis. *Prerequisites: Permission of instructor, and junior/senior status. Variable credit (1-12), depending on contract.*

CT 4920 - Practicum in Computer Information Systems

The practicum is designed to provide the student with an experiential learning experience in an area within computer information systems based on interest and availability. The practicum can be completed either on- or off- campus. *Variable credit (1-12)*

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. (4 credits)

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. (4 credits)

(CT5610, CT5750, CT6670 are offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Accelerated Program Requirements

(BS & MS in Computer Information Systems in 148 credits)

Students wishing to pursue both a BS and MS in CIS can apply to participate in the accelerated masters program. Under this degree path undergraduate students complete 12 MS CIS credit hours while pursuing a BS in CIS. These credit hours will count as required hours for both the

BS and MS degree, allowing students to complete a BS and MS in 148 credits instead of 160. Students wishing to pursue this option must have a cumulative GPA of 3.0, approval of the Associate Dean of the Management Division, Dean of Undergraduate Programs, Dean of Professional and Graduate Studies, and acceptance into the School of Graduate and Professional Studies. The three classes that will qualify for dual BS/MS credit are:

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. (4 credits)

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. (4 credits)

Creative Writing

The goal of the Creative Writing major at New England College is to prepare students for a professional writing career and/or to prepare students for graduate work in the creative arts.

Students will approach Creative Writing as a craft-based discipline rooted in the study of literature and writing. Through genre workshops and literature courses students will gain the analytical, critical and creative skills necessary to develop an informed practice of craft and, as a result, produce original works grounded in the historical and theoretical knowledge of the discipline. In this context, the Creative Writing curriculum emphasizes the authenticity and integrity of public voice.

All students in the Creative Writing program begin with a common set of core courses which introduce, examine and facilitate practice in a variety of creative writing genres. As a student progresses through this core they will, in consultation with the department faculty and their faculty advisor, identify, develop and pursue a full course of study which best serves to facilitate a close examination and revision of their creative work. As part of the Senior Seminar, all majors are expected to compile a professional manuscript in a specific or blended genre which demonstrates their understanding of and dedication to the practice of their craft.

In addition to their coursework, students are encouraged to engage in more extensive learning opportunities such as public readings, internships with regional writing organizations, community literacy projects, and taking on leadership roles with *The Henniker Review*, *The New Englander*, or other regional literary publications. The rich literary tradition at New England College provides superior opportunity for such engagement in the literary arts.

The breadth of curricular approaches offered within this major allows for a significant level of interdisciplinary study. Students who are interested in Creative Writing in conjunction with another major will work closely with faculty advisors in each discipline to develop a comprehensive plan of study that will enhance their knowledge and integrate professional practice in each discipline while completing the individual requirements for both courses of study.

Students interested in a teaching career involving Creative Writing curriculum should consult the Education Department Program in Secondary Education for requirements.

Learning Outcomes

Upon successful completion of the course, students completing the Creative Writing program should be able to:

- Recognize, identify, appreciate and discuss the different genres of writing and their inter-relationship.
- Critically read, analyze, and interpret complex texts be they in prose or verse.

- Effectively participate in peer reviewed workshops.
- Explain with clarify the relation of literature and creative writing to history and culture.
- Identify and discuss literary and artistic movements and their impact on social conditions and other fields of study.
- Use effective rhetorical strategies, along with proper grammar and punctuation, for academic, creative, aesthetic, personal, practical, and social purposes.
- Perform scholarly research using proper documentation and apply the terminology of the field of creative writing and literature with confidence.
- Write creatively and have a distinct personal point of view.
- Apply the principles and concepts of field to new and unexpected situations.
- Appreciate and be able to communicate the aesthetic value and importance of creative writing and literature.

The Henniker Review: The Henniker Review is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication

The New Englander The New Englander is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.

Edge Sports Edge Sports NH is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Experiential Learning Component

Students are encouraged to engage in more extensive learning opportunities such as public readings, internships with regional writing organizations, community literacy projects, and taking on leadership roles with *The Henniker Review*, *The New Englander*, or other regional literary publications. The rich literary tradition at New England College provides superior opportunity for engagement in the literary arts.

Major

Creative Writing, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Grades of C- or better are required for any course credit to count toward the major in Creative Writing. Unless otherwise noted, all courses listed are 4 Credits, unless otherwise noted.

All Creative Writing Majors

ALL CREATIVE WRITING MAJORS MUST COMPLETE THE FOLLOWING COURSE REQUIREMENTS

(48 credits)

CW Core Courses:

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites: WR 1010 and CW 1100. This course is offered every other spring semester. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

CW 2520 - Performance Practicum

This course works in conjunction with TH 2520 as a seven-week course to put into practice the skills gained in Speech for the Performer. Working with Creative Writing faculty, students work collaboratively with peers to create, publicize and present their work at a public reading at the college. *Offered the second seven weeks of every fall. This course is offered as Pass/No Record.*

CW 4100 - Practicum in Creative Writing

Students are required to take a four-credits Practicum within the following areas listed below. Practicum work at another magazine/organization may be allowed with Creative Writing Department approval. Students will work with a faculty mentor to create an individualized plan for successful completion.

- **The Henniker Review:** *The Henniker Review* is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication.
- **The NewEnglander** *The New Englander* is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.
- **Edge Sports** *Edge Sports NH* is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Prerequisites: 60 Credits earned. (4 Credits)

CW 4300 - Senior Seminar and Topics

The Senior Seminar course is designed to prepare students for careers in Creative Writing and/or graduate school study. Students are required to complete a professional manuscript of creative work in addition to an annotated bibliography of literature read during their program of study. Specific areas covered in the course also include publishing and career topics applicable to student success. *Prerequisites: 90 Credits earned and one advanced genre workshop. Offered every year in the spring. (4 Credits)*

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

Genre Workshops:

Take two courses from the following list:

CW 2100 - Short Story Workshop

Students submit their own short stories for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a short story portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

CW 2110 (EN 3520) - Poetry Workshop

Students submit their own poems for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a poetry portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

CW 2120 - Creative Nonfiction Workshop

The Creative Nonfiction Workshop asks writers to examine the relationship of narrative identity in the context of the creative writing process. Specific focus is given to autobiographical consciousness and subtext, the narrative arc and formation of identity of the self and others. Students submit work for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a Creative Nonfiction portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

Advanced Genre Workshops:

Take one course from the following list:

CW 3100 - Advanced Short Story Workshop

Advanced writing students may work with the 2100 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2100 and one of either CW 2110 or CW 2120. (4 Credits) Not Open for Students Who have taken EN 4540.*

CW 3110 - Advanced Poetry Workshop

Advanced writing students may work with the 2110 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2110 and one of either CW 2100 or CW 2120. (4 Credits) Not Open for students who have taken EN 4520.*

CW 3120 - Advanced Nonfiction Workshop

Advanced writing students may work with the 2120 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2120 and one of either CW 2100 or CW 2110. (4 Credits)*

Literary Movements

Take one course from the following

Take one course from the following 2000 level literary movements courses.

EN 2000 - Topics in Literary Movements

This course will examine the writers and criticism associated with that particular literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. (4 Credits) (May be repeated with permission)

EN 2001 - Topics in Modern Literary Movements

This course will examine the writers and criticism associated with that particular modern literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. (4 Credits) (May be repeated with permission)

- EN 2003 - Topics in Contemporary Literary Movements

EN 2080 - The American Short Story Since 1945

This course is both a detailed survey of the American short story since World War II, and an exercise in creative writing. The student, through rewriting the assigned stories will come to understand the changes in form from the inside out. As such, it offers literary background to creative writing students. This course satisfies a Creative Writing requirement. *Offered every fall.* (4 Credits)

EN 2140 - Existential Literature: The Individual Against the System

Existential literature dramatically illustrates the human being's confrontation with his/her existence with all its complexities. The emphasis in this course is on well-known existential writers, such as Kierkegaard, Dostoevsky, Kafka, Nietzsche, Ortega, Sartre, Simone de Beauvoir, Neruda, and Camus, but not limited to them. The students will examine how this philosophy has become so closely linked to the almost all artistic works of the 20th Century. *Offered every spring.* (4 Credits)

EN 2850 (EN 3850) - Modernism: Revolt and Discovery

Modernism is an elusive term difficult to define, and even more difficult to confine to a specific time in history. Yet it is universally accepted that some profound changes were already afoot around the turn of the 20th century in the related fields of art and literature, not to mention

technology. We will examine what factors contributed to this upheaval of society and the arts. We will discuss what impact these changes have had on our world today. We will do this through carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. (4 Credits)

Take one course from the following

Take one course from the following 3000 level literary movements courses.

EN 3000 - Advanced Topics Literary Movements

These courses will offer in-depth studies of specific Literary Movements and will examine the writers and criticism associated with that particular movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. (4 Credits)

EN 3020 - The Romantic Movement

This course will introduce the students to the movement called Romanticism as it will examine the major works of British literature of the period. It will branch out to include works by European writers of the same period, such as Goethe, Baudelaire, Rimbaud, and Lermontov. *Prerequisites: a lower level literature course, or permission of instructor. Offered every other year. (4 Credits)*

EN 3860 - Post-Modernism: Irony Takes Center Stage

Postmodernism seems to be a self-consciously contradictory phenomenon. It is as much about attitude as it is about negation of attitude. It is about trying to find meaning in a world where none may exist. Postmodernism seems to dominate the period after WWII, and irony dominates most of the works of art and literature of that period. The students will try to find the reasons as to why this may be so, as well as examine what Postmodernism may be heralding for the future by reading and analyzing carefully selected works of art, criticism, literature, and music. *Prerequisites: one 2000 level Literary Movements course. (4 Credits) Not open to students who have taken EN 4860*

Select one course from following:

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

CO 3120 - Journalism: Feature Writing Workshop

Feature articles are longer pieces that integrate research and reporting with stylistic techniques learned from great fiction. The course begins with a month of readings exploring different genres (travel, sports, music, politics, etc.), styles (profile, personal narrative, etc.), history (new journalists of the 60s and 70s like Thomas Wolfe and Hunter S. Thompson), and craft (feature leads, editing, organization, etc.). Informed and inspired, students then workshop their own articles, receiving constructive criticism from classmates. This course generates dynamic features for the college newspaper, *The New Englander*. *This course is offered every other spring. (4 Credits)*

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content

through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

EN 3950 (TH 3950) - Shakespeare

This course studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. This course is team-taught. *Prerequisites: at least a lower level literature course. Offered every other year. (4 Credits)*

Minor

Creative Writing Minor

- Description and Learning Outcomes
(20 credits)

All students must take:

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

CW 2520 - Performance Practicum

This course works in conjunction with TH 2520 as a seven-week course to put into practice the skills gained in Speech for the Performer. Working with Creative Writing faculty, students work collaboratively with peers to create, publicize and present their work at a public reading at the college. *Offered the second seven weeks of every fall. This course is offered as Pass/No Record.*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

Take one course from the following:

We will do this through carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. *(4 Credits)*

Take two courses from the following:

CW 2100 - Short Story Workshop

Students submit their own short stories for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a short story portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2110 (EN 3520) - Poetry Workshop

Students submit their own poems for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a poetry portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2120 - Creative Nonfiction Workshop

The Creative Nonfiction Workshop asks writers to examine the relationship of narrative identity in the context of the creative writing process. Specific focus is given to autobiographical consciousness and subtext, the narrative arc and formation of identity of the self and others. Students submit work for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a Creative Nonfiction portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

Other Programs

Creative Writing Suggested Course Sequence

Below is a suggested course sequence for the major. Due to the number of different course options available for fulfilling several requirements in the Creative Writing major, the sequence below has been constructed in a manner that actually presents a series of different paths toward graduation. In light of such variety, it is incredibly important that each student meet with his/her advisor to work out a specific course schedule each year.

First Year

Fall

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Elective

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (2 Credits)

Second Year

Fall

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

- LAS or Elective

Advanced Workshop:

- 3000 Level Literary Movements Course *or*

CW 3100 - Advanced Short Story Workshop

Advanced writing students may work with the 2100 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2100 and one of either CW 2110 or CW 2120. (4 Credits) Not Open for Students Who have taken EN 4540.*

CW 3110 - Advanced Poetry Workshop

Advanced writing students may work with the 2110 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2110 and one of either CW 2100 or CW 2120. (4 Credits) Not Open for students who have taken EN 4520.*

CW 3120 - Advanced Nonfiction Workshop

Advanced writing students may work with the 2120 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2120 and one of either CW 2100 or CW 2110. (4 Credits)*

4th Year

Fall

CW 4100 - Practicum in Creative Writing

Students are required to take a four-credits Practicum within the following areas listed below. Practicum work at another magazine/organization may be allowed with Creative Writing Department approval. Students will work with a faculty mentor to create an individualized plan for successful completion.

- **The Henniker Review:** *The Henniker Review* is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication.
- **The NewEnglander** *The New Englander* is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.
- **Edge Sports** *Edge Sports NH* is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Prerequisites: 60 Credits earned. (4 Credits)

Criminal Justice

The criminal justice major emphasizes a multidisciplinary and experiential approach to crime, justice, and the reduction of violence. It is a liberal arts major, requiring students to think critically, contemplate and appreciate alternative viewpoints, and communicate effectively. It encourages students to take both an analytical and experiential approach to criminal justice.

The major shows students the "working side of the street," encouraging them to interact with people on the front lines of the criminal justice system and to confront real-life issues. Courses in the major take students to criminal justice sites, such as corrections facilities, police departments, courts, and community agencies. Many classes include guest speakers who will discuss first-hand experiences with specific aspects of criminality and crime prevention.

Students who complete the criminal justice major may go on to careers in law enforcement, corrections, social services, the justice system, or law. Regardless of student career track, the study of criminal justice provides a deeper understanding of crime and justice in contemporary American society.

Learning Outcomes

Students who graduate with a degree in Criminal Justice should be able to:

- Articulate the purpose, structure, and function of the American criminal justice system, including the roles of its major components, law enforcement, the courts and the corrections system.
- Identify and discuss the foundation of our system of laws.
- Compare and contrast the prominent psychological and sociological theories of crime causation, criminal behavior, crime control, and punishment.
- Explain how the substantive and procedural criminal law affects the practices of law enforcement, the courts and corrections, and the protection of citizens' civil rights and liberties.
- Identify and explain ethical principles applicable to criminal justice professionals and how the concepts of ethics, morality and justice apply to law enforcement practice and the trial process.
- Demonstrate analytical and problem solving skills in reading and writing about issues in law and criminal justice, and, proficiency in the application of principles necessary for competence in the profession.
- Demonstrate an understanding of the basic principles of research by analyzing and applying information gathered from scholarly sources and applying it in a variety of problem-solving and decision-making situations.
- Effectively present the results of research and analysis orally and in writing in a manner that demonstrates competence in the use of standard English conventions, including grammar and other mechanics, organization, and proper attribution.

Experiential Component

In addition to a strong academic foundation, Criminal Justice courses offer a variety of experiences designed to introduce students to professionals in law enforcement, law and corrections and to engage them in the practical aspects of each institution. Frequent guest speakers help students make connections between what they are learning and its application in the real world. Classes may involve trips to state correctional facilities and local trial and appellate courts. Subject-specific classes, such as Criminal Investigations, require students to combine the techniques of crime scene analysis with the principles of criminal procedure, and ultimately demonstrate their knowledge by analyzing a mock crime scene as a final examination. Our internship program has placed qualified students in a variety of State and local law enforcement agencies, with prosecutors and victim/witness coordinators, in juvenile facilities, and at the NH State Prison. Finally, Issues in Professional Practice, the capstone class, requires graduating seniors to interview working professionals in the student's particular area of interest, to research contemporary issues in criminal justice and present their findings at an open forum, and, to participate in a mock oral board (hiring) exercise conducted by a panel of professionals from the criminal justice field. Overall, with a combination of academics and experience, students are well-positioned to succeed in the field.

Major

Criminal Justice, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(44 Credits)

Students must complete each of the listed Core Courses and two of the electives described below. Students must pass Introduction to Criminal Justice with a grade of C- or higher in order to be eligible to take courses above the 1000 level. A student may not earn more than two grades below a C- within the core requirements for the major.

Criminal Justice Core Courses

(36 Credits)

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. *(4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis

testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

CJ 2320 - Criminal Justice Ethics

This course introduces basic ethical theories, emphasizing how ethical theory can be applied to contemporary problems in law enforcement, corrections and adjudication. Topics covered include criminal justice policy, the ethics of law enforcement, court processes, and corrections. *Prerequisites: CJ 1110. (4 Credits)*

CJ 3010 - Corrections

This course provides an historic and philosophical overview of corrections in America. Students consider the correctional process, the types of detention facilities, and the rights of sentenced offenders. Probation, parole, and rehabilitation programs will also be examined. *Prerequisites: CJ 1110. (4 Credits)*

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites: CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)*

CJ 3210 - Contemporary Law Enforcement

This course examines current law enforcement practices including community policing, theories of incarceration, minority group relations, constitutional issues, and the special problems

associated with law enforcement in this decade. *Prerequisites:* CJ 1110. *Offered every Fall. (4 Credits)*

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites:* CJ 1110. *(4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites:* PO 1110 or CJ 1110 and minimum of 30 credits. *(4 Credits)*

CJ 4000 - Issues in Professional Practice: Criminal Justice

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Criminal Justice. Included is an exploration of future trends and opportunities within the discipline. Students will consider a number of theoretical and practical issues related to practice as a criminal justice professional, including transition to employment, the development of analytic and problem solving skills, and the production and presentation of research which demonstrates proficiency in writing and information literacy. Because the final paper and presentation are essential in demonstrating such proficiency, students must complete the final paper and project with a grade of C- or better in order to pass this course. CJ majors only. *Prerequisites:* Minimum 90 credits earned. *Offered every spring. (4 Credits)*

Criminal Justice Electives

(8 Credits)

Students may choose any two electives from the following list

CJ 1140 - U.S. Legal Systems

This course provides an introduction to the American Legal System, including its history, philosophy, and practices. Students will consider the structure and function of the legal system, several substantive areas of the law (e.g., torts and contract law), and the dynamic relationship between law and social policy. *(4 Credits)*

CJ 2110 - Criminal Justice Administration

This course is an introduction to the theories and practices of public administration, both generally and in criminal justice agencies. Traditional and contemporary organizational theories and public management issues are examined, including administrative accountability, responsibility and values. *Prerequisites: CJ 1110. (4 Credits)*

CJ 2120 - Gangs in America

Of the variety of criminal justice issues facing American society in the 21st century, none has a greater potential to threaten a free and democratic society than organized crime and gangs. Organized crime and gangs is not an isolated American phenomenon but has global origins and implications challenging all types of societies, economies, political structures, and criminal justice systems as it relates to violence, criminal activity, enterprising, and corruption. This course will offer a historical, sociological, economic, and legal analysis and perspectives of both national and international diversity of gangs in America. *Prerequisites: CJ 1110 and CJ 1130. Minimum 30 credits earned. (4 Credits)*

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and

seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites:* CJ 1110. (4 Credits)

CJ 3110 (PS 3110) - Juvenile Delinquency & Youth at Risk

What makes an at-risk-child become a juvenile delinquent versus a solid citizen? This class looks at developmental, environmental, social and physical/health issues that impact the life of children and influence the direction in which their lives may go. We will discuss relevant political issues, resiliency, education, and medical practices. We will look deeply into the corrections and social services agencies to analyze what is being done as well as what should be or should not be done to change things. The course will challenge your beliefs, ignite your curiosity, and with any luck at all, get you motivated to make a change in someone's life. (4 Credits)

CJ 3150 - Victimology

The course examines the role of the victim in the justice system - the evolution of victimology as a separate and distinct discipline and contemporary theories of victimology. To that end, we will consider: victim-offender relationships and victim precipitated crimes; the connection between demographics and the risk of victimization; the impact of the victims' rights movement on policy and legislation; victims of specific types of crimes such as rape, murder and stalking; the emergence of forensic victimology as an investigative tool; and victims of the criminal justice system-those wrongfully convicted of and imprisoned for crimes they did not commit.

Prerequisites: CJ 1110 Must have completed 30 credits. (4 Credits)

- CJ 3160 - Profiling Criminal Behavior

CJ 3170 (PS 3170) - Forensic Psychology

The goal of this course is to acquaint the student with the different psychological characteristics, levels of motivation, and different prognoses for criminal behavior. Homicide will be presented, not as a unitary event, but as a complex behavior, with different phenomenology, psychopathology, and dynamics. The course focuses on a number of case studies that illustrate the complex psychological issues involved in domestic violence, hate crimes, sexual homicide, and the role of mental illness in crime. In addition, the course covers the relationship of psychology to the practice of law and justice and the role a forensic psychologist plays within the

criminal justice arena. Concepts of personality assessment, expert testimony, and profiling of various offenders are discussed. *Prerequisites: Any 2000-level CJ or PS course. (4 Credits)*

CJ 3180 - Criminal Investigations

This course provides an in-depth examination of one of the most critical areas of traditional law enforcement: criminal investigations. Topics include techniques for the collection and preservation of physical evidence, crime scene photography, blood spatter analysis, lifting and storing fingerprints, crime scene reconstruction and the investigative processes applicable to specific crimes. A number of guest speakers, each a law enforcement professional, will enhance students' understanding of the investigative process. *Prerequisites: CJ 1110, CJ 2320. CJ 2130 Criminal Procedure is recommended. Must have completed 30 credits. (4 Credits)*

CJ 3910 (PO 3910) - Terrorism

This course is designed to introduce students to the study of terrorism and its challenges for national security. Students will explore numerous features of the subject including, but not limited to, definitional dilemmas, the origins and evolution of terrorism, tactical and targeting innovation, the psychology and characteristics of terrorist actors and counter-terrorism strategies employed by the Department of Homeland Security to protect against terrorist threat. Both international and domestic terrorist actors will be explored. *Prerequisites: CJ 1110 or PO 1110. (4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

CJ 3990 - Topics in Criminal Justice

Special topics in the study of Criminal Justice at the intermediate level. *Prerequisites: CJ 1110 and CJ 1130 (4 Credits) Course may be repeated for credit with different topics.*

CJ 4910 - Internship

Students may complete internships in criminal justice organizations and agencies, or related areas. *Contract and prior approval required. Variable credit (1-16)*

Minor

Criminal Justice Minor

- Description and Learning Outcomes

Requirements:

(20 credits)

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. *(4 Credits)*

Plus One of the following courses:

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal

responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites: CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)*

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites: CJ 1110. (4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

Plus Two upper level CJ electives

*(at least one course must be at the **3000 level or higher**)* may be selected from either the courses listed under the **Criminal Justice Core Courses** and/or the courses listed under **Criminal Justice Electives**.

Other Programs

Criminal Justice Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

First Year

Fall

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and

responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

- Elective

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. (4 Credits)

- Elective
- Elective

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

- Elective

CJ 3010 - Corrections

This course provides a historic and philosophical overview of corrections in America. Students consider the correctional process, the types of detention facilities, and the rights of sentenced offenders. Probation, parole, and rehabilitation programs will also be examined. *Prerequisites:* CJ 1110. (4 Credits)

CJ 2320 - Criminal Justice Ethics

This course introduces basic ethical theories, emphasizing how ethical theory can be applied to

contemporary problems in law enforcement, corrections and adjudication. Topics covered include criminal justice policy, the ethics of law enforcement, court processes, and corrections.

Prerequisites: CJ 1110. (4 Credits)

CJ 3210 - Contemporary Law Enforcement

This course examines current law enforcement practices including community policing, theories of incarceration, minority group relations, constitutional issues, and the special problems associated with law enforcement in this decade. *Prerequisites:* CJ 1110. *Offered every Fall.* (4 Credits)

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites:* CJ 1110. (4 Credits)

- CJ or other Elective (4 credits)

Third Year

Fall

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites: CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

- LAS 2130 (LAS 5) Lab Science
- Elective

Spring

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

4th Year

Fall

CJ Electives or remaining requirements.

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

Spring

CJ 4000 - Issues in Professional Practice: Criminal Justice

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Criminal Justice. Included is an exploration of future trends and opportunities within the discipline. Students will consider a number of theoretical and practical issues related to practice as a criminal justice professional, including transition to employment, the development of analytic and problem solving skills, and the production and presentation of research which demonstrates proficiency in writing and information literacy. Because the final

paper and presentation are essential in demonstrating such proficiency, students must complete the final paper and project with a grade of C- or better in order to pass this course. CJ majors only. *Prerequisites: Minimum 90 credits earned. Offered every spring. (4 Credits)*

Economics

Education

The Study of Education

The study of education at New England College contains two undergraduate options:

1. Educational Communities and
2. Teacher Certification.

Upon entering the Education Program all students are considered to be Education majors. Students choose either the Educational Communities path or the Certification path. In order to apply to the Teacher Certification path students use the process described below. Students who decide that they want to work in educational settings in roles other than state certified teachers (e.g. teaching assistants, educators in the public sector - a museum, a not-for profit organization, educators in private schools, etc.) may choose the Educational Communities path for their program. Students who choose the Educational Communities portion of the program will work with their advisors to tailor their program to meet their career goals.

New England College's teacher education programs are accredited by the New England Association of Schools and Colleges (NEASC) and the certification programs are approved by the New Hampshire State Board of Education. The teacher certification major is designed for students interested in elementary education, secondary education, general special education, principal (graduate only) or superintendent (graduate only) and who seek certification in New Hampshire and other states. The Educational Communities and certification majors are experience-based programs in which students understand and apply theories of teaching and learning in classrooms and beyond.

Students in the New England College Education program will:

- Learn to become an educator by working in schools, classrooms, and educational organizations through all 4 years of their program.

- Learn how to meet the individual needs of all learners, particularly those with special needs and those who are gifted.
- Create exciting, meaningful, and effective educational experiences that engage learners.
- Work collaboratively with others to identify and take thoughtful and effective action to solve community-based problems.

Learning Outcomes

The teacher certification major is designed for students interested in certification in elementary education, secondary education (Social Studies, English, Life Science, general special education K-12, physical education K-12, theatre education K-12, principal, or superintendent). New England College recommends students for certification in New Hampshire upon successful completion of all degree requirements. Students seeking certification in states other than New Hampshire are guided by the reciprocity agreements between New Hampshire and those states.

Those students who want to experience an educationally related career but who do not wish to become certified teachers may choose to major in Educational Communities. The non-certification program is designed to prepare students who wish to pursue a wide variety of careers in community-based education.

In the New England College program, students:

- gain a strong liberal arts background in English, mathematics, science, civics and government, economics, art, history, and geography;
- demonstrate proficiency in basic skills (reading, writing, viewing, performing mathematical operations, listening, speaking, and use of technology) and thinking skills (creative thinking, decision making, problem finding and solving, visualizing, reasoning, and knowing how to learn);
- develop their personal qualities of responsibility, self-esteem, sociability, self-management, integrity, and honesty;
- plan, implement, and assess teaching and learning in light of local, state, and national standards;
- gather and analyze information sources;
- work and communicate effectively with others to understand, negotiate, and influence complex systems in schools and communities;

- create and manage caring learning environments where students and teachers are active and responsible citizens;
- become agents of change who can effectively identify and meet the needs of diverse learners and communities;
- develop an understanding of and responsibility to the global community;
- assess and apply knowledge and processes to new situations and problems that they encounter; and
- reflect on their practice and commit themselves to life-long learning.

Criminal Record Check

All students engaging in field practica must meet the requirements of the State of New Hampshire criminal record check. See the Administrative Assistant or Associate Dean of Education for details.

What is Teacher Certification?

In New Hampshire, as in most states, graduating from college with a degree in Education is not sufficient to become a teacher in the public schools of the state. One must also be certified to teach. Certification is obtained by meeting various state requirements covering general education (writing, mathematics, and the NEC General Education program) meeting the requirements of a major, meeting the requirements of an accredited Education Department (such as the one at New England College), and meeting specific state requirements in the particular area of certification (elementary, secondary, special education, etc.) that a student wishes to pursue. These requirements are described below, along with a step-by-step process for being accepted into the Teacher Certification Program. The process may seem complicated, but each Education major at the College is assigned an advisor who will help him/her through the process.

To meet state certification requirements, in addition to meeting the education department's requirements, all Education majors must also complete a content major. To meet state certification requirements, all secondary education majors select from the following list:

English 5-12

Social Studies 5-12

Life Science 7-12

General Special Education certification majors must also major in one of the secondary certification areas or elementary education.

Elementary education majors have their major area of concentration in elementary education and a major area of concentration consisting of a minimum of 24 credits in social studies, English Language Arts, science, or mathematics. The K-8 teacher certification candidate should work closely with his/her advisor to identify appropriate courses to meet this state requirement.

Beginning with the first year, students may obtain practical experience in teaching and working with students; field-based experiences and service-learning are incorporated throughout the professional sequence. The teacher certification major at New England College includes a broad general education background in the liberal arts, integrated with a sequence of professional courses in education. All elementary and secondary education majors are required to take and receive passing scores on the Core Academic Skills Test prior to being eligible to apply to the major and they must take and receive passing scores on Praxis II in order to be eligible for certification.

State of New Hampshire General Education Requirements for Teacher Certification

To comply with New Hampshire general education requirements for teachers, students must successfully complete course work dealing with each of the following areas as stated in the requirements outlined by the New Hampshire State Department of Education: The General Education program shall include these core competencies:

Content competencies in the following areas necessary for college and workforce success:

1. Language arts;
2. Reasoning;
3. Information literacy;
4. Mathematics;
5. Sciences;
6. Social sciences; and
7. The arts;

Creative competencies in the following areas:

1. Creative expression;
2. Critical thinking;

3. Innovative and collaborative problem-solving; and
4. Resourcefulness;

Communication competencies in the following areas:

1. Languages;
2. Digital media;
3. Networking; and
4. Content creation technologies; and

Cultural competencies in the following areas:

1. Cultural understanding;
2. Taking responsibility for self and others;
3. Adaptability and resilience;
4. Ability to engage in productive teamwork; and
5. Social and civic engagement.

The General Education requirements are fulfilled through the General Education program at NEC: WR 1010 - Composition, College Math, and LAS 1 through LAS 7.

Requirements for Acceptance to the Teacher Certificate Programs

STEP ONE

Register for and pass the CORE Academic Skills Test. For information about this test and how to register for it go to <http://www.ets.org/praxis/nh/>

STEP TWO

Enroll in ED 1010 - Teaching Portfolio I. Once successfully completed, enroll in ED 2050 - Teaching Portfolio II. At the conclusion of this class, and providing the minimum requirements for acceptance into the major have been met, the student will submit a completed e-portfolio to the Associate Dean of Education. If all requirements are met, see below, an interview will be scheduled.

Minimum requirements for acceptance are:

- grades of C or better in WR 1010 , or, if the student is a conversion student, grades of C or better in at least one College Writing course;
- a grade of B- or better in ED 1000 Issues in Professional Practice and School Law (undergraduate) or ED 6410 - Dynamics of Educational Reform and Systems Change (including a practicum) (graduate);
- completion of Math 1015 Number Sense (required of elementary education, secondary education English, or social studies, general special education K-12, and theatre K-12 majors), Math 1510 Pre-calculus (required of secondary education life sciences), Math 1000 or above (required of physical education K-12) with a grade of C or better or, if the student is a conversion student, a grade of C or better in a college level math course;
- passing scores on the CORE Academic Skills Test;
- a minimum cumulative grade point average of 2.75 for acceptance into and retention in the teacher certification major (undergraduate); a minimum cumulative grade point average of 3.0 for acceptance into and retention in the Masters of Education and teacher certification program;
- sophomore status (undergraduate) or completion of ED 6410 (graduate);
- have grades of B or better in at least three education courses; and
- permission of the Associate Dean of Education.

Students will present their e-portfolio which will contain at a minimum:

- a copy of the student's transcripts,
- a letter introducing the faculty to the portfolio, what is in it, why the student selected what he/she chose, and points of interest,
- a table of contents (which is generated by e-Folio),
- the Intent to Major in Education form,
- A typed essay sharing the student's reasons for wanting to major in teacher certification and any personal experiences that have led the student to pursue a career in teaching (undergraduates). Graduate students may submit the essay that they included in their application to the Master of Education program,

- at least one letter of recommendation from a faculty member who is not in the Education Department. If the student is a graduate student, he/she may use the letters of recommendation submitted at the time of application to the Master's of Education program,
- a writing sample (each participant will be given one question to which he/she must respond in writing) - this sample must be scanned to be placed e-Folio;
- copies of mid-semester and final evaluations from Practicum experiences;
- at least two writing samples, one should be from a course other than education - graduate students may submit both samples from courses in education; and
- other materials the applicant believes attest to his/her qualifications and ability to major in education such as sample lesson plans, photos, videos of the student teaching a lesson, etc.

The faculty in the Education Department will review the applicant's portfolio and the Associate Dean of Education will notify the applicant of his/her status. Those who are eligible to continue the application process will be invited to make an appointment for an interview. Those who are ineligible to continue or who need to make revisions to their portfolios will be asked to meet with their academic advisor to discuss alternatives.

STEP THREE

The applicant will be interviewed by at least two faculty members. Students will be evaluated for acceptance/retention into the teacher certification program and for recommendation for state certification using the basic criteria as set forth by the State of New Hampshire, which include:

- quality of scholarship;
- leadership potential;
- physical and mental health appropriate to the tasks to be performed;
- acceptable voice and speech characteristics;
- competency in oral and written English;
- competency in mathematics;
- participation in extracurricular activities;
- competency in the major area of study;

- competency in the professional sequence of study;
- successful performance in professional experiences; and
- personal characteristics.

Please Note: In order to be admitted and retained to all phases of the teacher certification program, and finally to the profession, candidates must demonstrate the competencies implicit in the general criteria as stated above.

The applicant will be notified in writing of his/her status after the interview. If accepted, the student must keep the following in mind:

- to be retained in the major the student must maintain a minimum cumulative grade point average of 2.75 (undergraduate) and 3.0 (graduate);
- students are responsible for knowing the requirements that must be fulfilled to be eligible for certification;
- the student must have an academic advisor in his/her major as well as an academic advisor in education; and
- all students must clearly identify their content major - secondary education majors may select English, social studies, life sciences; K-8 certification candidates complete at least 24 credits in social studies, English Language Arts, the sciences, or mathematics; general special education majors must also select elementary education or secondary education and fulfill all requirements associated with that area of certification. Physical Education K-12 and Theatre Education K-12 must complete all requirements associated with those majors.

Student Teaching

This is a field experience during which the student works as a fulltime supervised teacher in a school near the College. Students must be accepted to the major and obtain the permission of the Associate Dean of Education to enroll in student teaching and they must have taken Praxis II if required for their area of certification prior to being placed for student teaching.

Obtaining Certification

The State of New Hampshire has reciprocity with other states therefore when you receive your New Hampshire certification you can apply for certification in a different state. Please be aware that you may need to take additional tests so it is important to review the requirements for certification for each state in which you want certification.

In New Hampshire all certification candidates must pass the CORE Academic Skills Test and have their scores sent to New England College and the NH State Department of Education. Each certification area has specific testing requirements, which are subject to change at any time. They are as follows:

Elementary Education -

- Core Academic Skills Test,
- Praxis II in Middle School based on your concentration area of social studies, mathematics, sciences, or English Language Arts,
- Praxis II for elementary education, and
- Foundations of Reading Test.

Secondary Education (English, life sciences, social studies. NOTE: Certification in Mathematics is only available for graduate teacher conversion students) -

- Core Academic Skills Test and
- Praxis II based on your area of certification, English, life sciences, social studies. (NOTE: Certification in Mathematics is only available for graduate teacher conversion students).

Theatre Education K-12 -

- Core Academic Skills Test

Physical Education K-12 -

- Core Academic Skills Test and
- Praxis II (when required by the NH State Department of Education).

Special Education K-12 (must have certification in Elementary Education or Secondary Education Secondary Education (English, life sciences, social studies. NOTE: Certification in Mathematics is only available for graduate teacher conversion students) -

- Core Academic Skills Test

- Praxis II based on your area of certification, English, life sciences, social studies. (NOTE: Certification in Mathematics is only available for graduate teacher conversion students)

Post-Baccalaureate Conversion

New England College also offers a postbaccalaureate conversion program to prepare individuals for New Hampshire State Teacher Certification in elementary, secondary (English, Life Science, Social Studies, Mathematics), general special education K-12, physical education K-12, and theatre education K-12. The program is designed specifically for people who have completed a bachelor's degree from a regionally accredited college or university and seek additional courses and student teaching to fulfill state certification requirements. Recognizing the unique educational backgrounds of each participant, New England College's conversion program develops an academic plan that satisfies all of the required education courses for the student's area of certification, as well as any additional courses in general education and/or content-related disciplines. In this program, it is also possible simultaneously to achieve certification and earn a Master's degree in education. Individuals interested in this program should contact the Office of Graduate and Professional Studies for more information.

Experiential Learning Component of the Education Program

The Education program has woven throughout it many opportunities for students to see theories learned in the college classroom applied in area schools and agencies. Every four credit education core course has an applied, experiential element woven into it.

- In the ED 1001 Issues in Professional Practice and School Law course students work to fill a need in an area school or agency. Students spend a minimum of 30 hours in their placement assisting educators in a variety of capacities.
- In ED 1030 Introduction to Special Education: Disabilities, Issues, and Laws students interview a range of professionals who work with students with disabilities becoming familiar with their roles and how they can help an educator working with students with disabilities while becoming familiar with different placement options.
- In ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum students visit a range of schools and classrooms to see how the curriculum is organized and taught from kindergarten through high school.
- In ED 2030 Meeting the Needs of All Learners students become familiar with case management and develop a resource notebook that they can use when they enter teaching and share with parents.

- In ED 3000 Literacy and Language Arts students develop tools to assist readers at all grades kindergarten through high school and share these tools with area educators.
- In ED 3010 Teaching Math students develop math interventions and bring these tools to students in area schools to enhance their skills in math.
- ED 4010 Methods Practicum happens right before student teaching and requires the student to spend a minimum of 15 hours a week in a school setting. In this Practicum students develop and are observed teaching four lessons and assist the cooperating teacher in a variety of ways.
- The final experience is student teaching. This is a full-time teaching experience in a school within 30 miles of campus. The student teacher assumes the role of the teacher in a tiered, cohesive, extended model. Those seeking general education student teaching will participate in their placement from mid-August up to the December holiday break, or from right after the New Year until the public school's April vacation. Those seeking dual certification will participate in their general education student teaching experience from mid-August through the end of October and then transition to their special education placement from November up to the public school's February vacation, or from right after the New Year to the end of March in the general education setting and then from the end of March to the end of the public school academic year in a special education placement.

Major

Education, B.A.

Requirements

Elementary Education and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems

perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a*

Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)

ED 3010 - Teaching Math

This course provides students with the content knowledge needed to provide instruction in math. Mathematical reasoning, problem solving, and the use of various strategies and technology to help students acquire skills and knowledge associated with math literacy will be discussed. Students will also be exposed to current methods of teaching mathematics. There will be a focus on integrating mathematics into the other areas of the curriculum. Students will be required to spend time in a general education classroom working with teachers as they provide mathematic instruction including Response to Intervention instruction. *Prerequisites:* Must have successfully

completed ED 1000 : Issues in Professional Practice and School Law and College Level Math. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every spring. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4915 - Student Teaching: Elementary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to

set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and

formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought &

process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

- LAS Elective *(4 Credits)*

Concentration Courses

Must have a minimum of 24 credits in one concentration: English, Social Studies, Mathematics, or Science - courses to be approved by advisor.

Physical Education K-12 and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general

education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral,

referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4914 - Student Teaching: Physical Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component -*

Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.

General Education Courses

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems). Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. *(Meets the second seven weeks of every spring semester.) Offered every spring (2 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

- LAS Elective *(4 Credits)*

Content Courses

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall. (4 Credits)*

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. *Offered every year. (4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and

closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2112 - Movement Instruction: Creative Movement

This skills-based course provides instruction and application of key principles and fundamentals of physical movements in rhythms and basic gymnastics. Particular focus is placed on the skill progressions appropriate in school physical education programs, after school programs, and recreation programs. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess a variety of rhythmic movements, and fundamental gymnastics skills such as tumbling. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of fitness based activities. Emphasis is placed on the

student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 2140 - Motor Behavior

This course provides an overview of motor development, motor learning, and motor control. Specific focus is placed on how the brain and nervous system control movement and how new movements are learned and improved. Development of fundamental movement skills as well as applications of motor control and development to teaching and coaching of movement activities

will be explored. This course includes practical components to apply key concepts introduced to the learning, evaluation, and assessment of sport and movement skills. *Offered every year. (2 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 3180 - Biomechanics

This course provides a combined theoretical and practical experience in the application of the mechanical principles of movement. Students explore and apply the mechanical principles of physics to human movement. Particular attention is given to how one develops efficiency in various movements and to the mechanical principles for instruction of physical motor skills. The focus is on the applied science as it relates to the teaching, coaching, and training of various physical skills and activities. Students will participate in the scientific analysis of movement. The course integrates athletic and health-fitness perspectives on movement training and enables students to critique and design appropriate movement skill progressions for sport or exercise. A thorough understanding and background in anatomy is essential for successful integration into this course content. *Prerequisites: BI 2030. Offered every spring. (4 Credits)*

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites:* KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility and endurance and learn how to most efficiently condition the human body for physical activity. The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites:* BI 2030, Minimum of 60 credits earned. Offered every fall. (4 Credits)

Theatre Education K-12 and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course

include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member

with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment.

The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current

research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of

instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4916 - Student Teaching: Theatre Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

TH 2230 - Movement for the Performer

A theatrically-oriented dance course for the performer. This course explores alternative movement forms through the use of music, masks, properties and furniture. Students participate in exercises and develop presentations in an effort to experience varying and innovative techniques through which the performer can communicate. *Offered every fall. (4 Credits)*

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

Content Courses

TH 1211 - Acting One - For Majors and Minors

This course is designed for the student who has a background in Acting. Emphasis is placed on taking this student deeper into the realm of playing which is at the heart of all acting. Students will participate in acting exercises, improvisation, monologues and scene study. *Offered during the first seven weeks of every spring. (2 Credits)*

TH 1220 - Production Management

Designed to provide students with a basic understanding of the process of theatrical production from conception to execution and evaluation. Particular emphasis is placed on the hierarchy and careers of the theatre, the process of designers, directors and actors and more detailed experience with the elements of stage management. *Offered during the second seven weeks of every spring. (2 Credits)*

TH 1310 - Seminar in Technical Theatre: Scenery

A concentrated course on the planning, methodology and construction of scenery for the theatre. Specific areas of study will include reading and interpreting shop drawings, basic woodworking tool use, and fundamental techniques of scenery construction. Practical application through crew work on departmental productions is stressed and required. *Offered during the first seven weeks of every fall. (2 Credits)*

TH 1320 - Seminar in Technical Theatre: Stage Lighting

A concentrated course on modern stage lighting principles and practice. Specific areas of study include electrical theory and safety, stage lighting instruments, and distribution control. Practical application through crew work on departmental productions is stressed and required. *Offered during the second seven weeks of every fall. (2 Credits)*

TH 2210 - Character Development

An acting course that emphasizes character development through role and scene analysis. Particular emphasis is placed on the scoring of the role using a variety of exercises and journal work. *Prerequisites: TH 1210 or TH 1211. Offered the first seven weeks every fall. (2 Credits)*

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production

from conception to execution and analysis. This course focuses on the Theatre Department Main stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 3240 - Directing

The goal of this course is to develop and discover an understanding of the responsibilities, resources and process of the theatrical artist known as the director through lecture, discussion and class exercise. This hands-on creative approach will explore the journey of the director from casting to production through exercises and scene work. *Offered every spring. (4 Credits)*

TH 3320 - The Design Process

An exploration of the process of theatrical production design (scenery, lighting, and costumes). Specific areas of study include design history, theory, and script analysis. *Offered the first seven weeks of every spring. (2 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the

perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

TH 4210 - Advanced Acting

Focused studies of a range of acting forms and techniques. Courses may include: Oral Interpretation of Literature, Acting for Film and Video and Period Styles. *Prerequisites:* TH 3210. *Offered every spring. (2 Credits) May be repeated for credit with different topics.*

TH 4220 - Advanced Technical Seminar

Focused studies of a range of technical topics. Courses may include: Advanced Stage Lighting, Computer Aided Drafting for the Theatre. *Prerequisites:* TH 1310 and TH 1320. *Offered every spring. (2 Credits) May be repeated for credit with different topics.*

Electives

- Elective (4 Credits)

Secondary Education: English/Language Arts and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:*

Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language

and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to

implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal

Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and

formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory

experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Content Courses

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites: WR 1010 and CW 1100. This course is offered every other spring semester. (4 Credits)*

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and

literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the

perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

- Literature Elective (Chosen in consultation with advisor to round out understanding of literature) *(4 Credits)*

Electives

- Elective *(3 Credits)*

Secondary Education: Social Studies and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those

standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree

identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum,

including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4919 - Student Teaching: Secondary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational

technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Experiential Component - full-time placement in a school. Prerequisites: Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites: Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required*

courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites: C- or better in MT 1002 or adequate performance on the mathematics placement test. 4 Credits*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively,

and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory

experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Content Courses

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

HS 1150 - World Civilization

Despite the apparent success of the West in the last half millennium, much of the world's achievements began or were sustained in non-Western cultures. The pre-Columbian Maya and Inca, the succession of peoples along the banks of the Tigris, Euphrates and Nile and of course China have all made remarkable contributions to the modern world as we know it long before Europeans could read or write. *(4 Credits)*

HS 2040 (PO 2040) - Research Methods

This course awakens the apprentice historian to the various methodologies of the historical profession. We will explore the elements of research: sources, analysis and argument, and practice the historian's craft: research, professional writing and oral (conference style) presentation. *(2 Credits)*

HS 3080 - Major Problems in Modern America

This seminar will examine the various themes and problems in American history and culture from the end of Reconstruction to the very near past. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Each student, in concert with the faculty mentor, will design and complete a problem-based individual learning plan. *(4 Credits)*

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. (4 Credits)

PO 3450 - U.S. Foreign Policy

This course provides student with an opportunity to analyze American foreign policy from the perspectives of both domestic American politics and international relations. Policy with reference to the Soviet Union, the Third World, political and military allies, nuclear and conventional weapons, international organizations and human rights are considered. (4 Credits)

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

Secondary Education: Life Sciences and General Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet

the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different

related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Experiential Component - applied in general education included - minimum of 3*

hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4919 - Student Teaching: Secondary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Experiential Component - full-time placement in a school. Prerequisites: Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to

set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This

course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively,

and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

- LAS Elective *(4 Credits)*

Content Courses

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) *Offered every spring (2 Credits)*

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites: BI 1111-BI 1114. Offered in even springs. (4 Credits)*

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites: BI 1111 -BI 1114. Offered in even falls. (4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites: BI 1111-BI 1114. Offered in odd springs. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation. *Prerequisites: MT 1510. (4 Credits)*

Electives

- Elective (4 Credits)
- Elective (4 Credits)

Physical Education Courses

Courses

Physical Education

The following PE 1000-level activity courses consist of practical participation and theoretical learning in individual and team physical activities with emphasis on the enjoyment of leisure-time activities. One (1) credit is granted for each course and each of these courses meets for one-half of the semester (7 weeks). With the exception of Kinesiology majors, students may take a maximum of six (6) of these courses for credit toward graduation. Not repeatable for credit. No prerequisites required for these activity courses unless specifically noted in a course description.

PE 1530 - Hiking

This course will include instruction in the basics of hiking. Students will be instructed in hiking techniques and safety and will participate in hikes. This is a recreational class open to all students. (1 Credit)

PE 1550 - Ultimate Frisbee

This course will include instruction of the basic techniques, rules and skills needed to play ultimate frisbee. By the conclusion of the class students will be able to participate in ultimate frisbee as a lifetime activity. This is a recreational class open to all students. Equipment is provided. (1 Credit)

PE 1610 - Strength Training

This course introduces students to the development of muscular strength and endurance through a progressive resistance program. Students actively participate in designated exercises to increase their strength using weights and/or other resistance devices. *(1 Credit)*

PE 1630 - Fitness for Life

This course is a practical introduction to common fitness activities that can be performed by individuals with varying levels of fitness and physical characteristics throughout their lives. Students may be involved in walking, hiking, cycling, strength development, cooperative games and other low-to-moderate intensity fitness activities. *(1 Credit) Note: Fitness for Life is intended for the relatively sedentary person who wants to learn and become more motivated in physical activity.*

PE 1640 - Physical Conditioning

This is a conditioning course intended for students who are already moderately active and who want to increase their levels of cardio-respiratory and musculo-skeletal fitness. Moderate to high-intensity training methods such as walking/jogging, interval, circuit, fartlek training, plyometrics, Pilates, and resistance training are typically offered. *(1 Credit)*

PE 1650 - Aerobics

This is a conditioning course utilizing various levels (low to high impact) of cardiovascular exercises as a means toward developing an improved level of physical fitness. *(1 Credit)*

PE 1660 - Tae Kwon Do Level I

Tae kwon do (meaning the way of hand and foot) had its beginnings in Korea and now is practiced in 157 countries around the world. Students participating in this course will learn and practice basic blocks, punches, kicks, patterned forms, sparring techniques, self-control, Korean terminology, as well as the customs and courtesies. *(1 Credit)*

PE 1670 - Cardio-Kickboxing

One of the most popular group exercise workouts in the country. Training principles are derived from the Martial Arts, Aerobics and Boxing. These varied disciplines combine to form a comprehensive workout that is safe, effective and fun. Students will learn proper execution of the techniques. *Offered upon sufficient demand. (1 Credit)*

PE 1680 - Yoga

This course is designed to offer the student with the techniques and philosophies associated with yoga. Different types of yoga may be taught, based on the instructor training and certifications. The student will actively participate in the postures and positions of basic yoga, and will also gain knowledge in the theories and philosophies associated with the specific form of yoga performed. *(1 Credit)*

PE 1690 - Self-Defense

This course teaches physical skills as well as using critical thinking skills. The focus of this course is to identify threat recognition, threat analysis and threat management. The student will learn tactics to stay safe in various environments and tools that can be used effectively to increase personal safety. Skills to be learned and practiced include: defenses, blocking and falling techniques, all specifically designed to recognize, avoid, or provide for safe removal from a threatening environment. No previous self-defense or martial art skills required. *(1 Credit)*

PE 1710 - Golf

This course will include instruction of the basic rules, techniques and skills needed to play golf at any level. Students will also be able to identify the mental, social, and physical benefits of participation in playing golf as a lifetime sport. No previous experience playing golf is required. *(1 Credit)*

PE 1720 - Racquet Sports

This course will include instruction of the basic rules, techniques and skills needed to play the various racquet sports (typically badminton or tennis) at any level. Students will also be able to identify the mental, social, and physical benefits of participation in the activity as a lifetime sport. No previous background in the sport is required. *(1 Credit)*

PE 1740 - Fundamentals of Rhythm

This is a participatory course. All students will learn various types of dance and rhythmical movement, how to incorporate manipulatives with music and movement, and different methods of teaching rhythmic expression. The course is designed to provide students with an understanding of how to teach a progressive unit in rhythms to students of any age. *(1 Credit)*

PE 1760 - Beginner Skating

This course is a practical introduction to the basic techniques involved in ice skating: balance, edging, turning, skating forward and backward, and developing a more powerful stroke. Basic techniques common to both figure and power (hockey) skating comprise the majority of the course. This course is intended for beginners. A pair of figure or hockey skates is required. *(1 Credit)*

PE 1790 - Movement for Relaxation and Revitalization

A course in gentle bodywork, breathing exercises and meditation practices intended to open the vital energy pathways, tone and balance the major organs and glands and the nervous system, improve spinal alignment and flexibility, and enhance mental, emotional and spiritual clarity and balance. Movement forms practiced in the course may include yoga, sotai, qigong, and tai chi. *(1 Credit) Course may be repeated for credit with a different instructor and/or topic.*

PE 1810 - Volleyball

This course will include instruction of the basic rules, techniques and skills needed to play volleyball at any level. Students will also be able to identify the mental, social, and physical

benefits of participation in volleyball as a lifetime sport. No previous volleyball skills are necessary. *(1 Credit)*

PE 1820 - Softball

This course will include instruction of the basic rules, techniques and skills needed to play softball at any level. Students will also be able to identify the mental, social, and physical benefits of participation in softball as a lifetime sport. *(1 Credit)*

PE 1830 - Soccer

This course will include instruction of the basic rules, techniques and skills needed to play soccer at any level. Students will also be able to identify the mental, social, and physical benefits of participation in soccer as a lifetime sport. No previous soccer skills are necessary. *(1 Credit)*

PE 1840 - Basketball

This course will include instruction of the basic rules, techniques and skills needed to play basketball at any level. Students will also be able to identify the mental, social, and physical benefits of participation in basketball as a lifetime sport. No previous basketball skills are necessary. *(1 Credit)*

PE 1850 - Field Hockey

This course will include instruction of the basic rules, techniques and skills needed to play field hockey at any level. Students will also be able to identify the mental, social, and physical benefits of participation in field hockey as a lifetime sport. No previous field hockey skills are necessary. *(1 Credit)*

PE 1860 - Lacrosse

This course will include instruction of the basic rules, techniques and skills needed to play women's or men's lacrosse at any level. Students will also be able to identify the mental, social,

and physical benefits of participation in lacrosse as a lifetime sport. No previous lacrosse skills are necessary. *(1 Credit)*

PE 1870 - Floor Hockey

This course will cover the basic fundamentals of floor hockey such as stick handling, passing, shooting, etc, as well as more advanced concepts such as face-offs, goal tending, offensive and defensive tactics. The rules of the game and team aspects associated with floor hockey will also be taught. The emphasis will be on learning how to play floor hockey, practicing the various skills, and having fun. *(1 Credit)*

PE 1880 - Flag Football

This one credit course is designed to teach the basics fundamentals, rules and skills of flag football. Students will receive instruction in the rules of play, skills and strategies required to experience team play in the sport of flag football. *(1 Credit)*

PE 1990 - Topics in Movement Skills

Varied topics in Movement Skills. *(1 Credit) May be repeated with different topics for credit.*

Educational Communities, B.A.

Requirements for Acceptance to Educational Communities

STEP ONE

Develop an essay indicating why you want to be in the Educational Communities major. What is it you hope to accomplish as a result and how does being in the major assist you in accomplishing your career goals.

STEP TWO

Enroll in ED 1010 - Teaching Portfolio I. Once successfully completed, enroll in ED 2050 - Teaching Portfolio II. At the conclusion of this class, and providing the minimum requirements

for acceptance into the major have been met, the student will submit a completed e-portfolio to the Associate Dean of Education.

Minimum requirements for acceptance are:

- grades of C or better in WR 1010 ;
- a grade of B- or better in ED 1000 Issues in Professional Practice and School Law;
- completion of Math 1015 Number Sense or Math 1000 or above with a grade of C or;
- a minimum cumulative grade point average of 2.75 for acceptance into and retention in the major;
- sophomore status; and
- permission of the Associate Dean of Education.

Students will present their e-portfolio which will contain at a minimum:

- a copy of the student's transcripts,
- a letter introducing the faculty to the portfolio, what is in it, why the student selected what he/she chose, and points of interest,
- a table of contents (which is generated by e-Folio),
- the Intent to Major form,
- A typed essay sharing the student's reasons for wanting to major in Educational Communities and any personal experiences that have led the student to pursue a career in education,
- copies of mid-semester and final evaluations from Practicum experiences; and
- other materials the applicant believes attest to his/her qualifications and ability to major in education.

The faculty in the Education Department will review the applicant's portfolio and the Associate Dean of Education will notify the applicant of his/her status Those who are ineligible to continue or who need to make revisions to their portfolios will be asked to meet with their academic advisor to discuss alternatives.

STEP THREE

The faculty in the Education Department will review the applicant's portfolio and the Associate Dean of Education will notify the applicant of his/her status Those who are ineligible to continue or who need to make revisions to their portfolios will be asked to meet with their academic advisor to discuss alternatives. Students will be evaluated for acceptance/retention into the major using the basic criteria as set forth by the State of New Hampshire, which include:

- quality of scholarship;
- leadership potential;

- physical and mental health appropriate to the tasks to be performed;
- acceptable voice and speech characteristics;
- competency in oral and written English;
- competency in mathematics;
- participation in extracurricular activities;
- competency in the major area of study;
- competency in the professional sequence of study;
- successful performance in professional experiences; and
- personal characteristics.

The applicant will be notified in writing of his/her status after the interview. If accepted, the student must keep the following in mind:

- to be retained in the major the student must maintain a minimum cumulative grade point average of 2.75;
- students are responsible for knowing the requirements associated with the major; and
- the student must have an academic advisor in education.

Educational Communities Major

College Requirements and LAS Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. (*4 Credits*)

- MT 1000+ College Level Math (*4 Credits*)

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

LAS 2 (LAS 1120) - The Civic Environment - Democratic Values**An introduction to understanding the values and ideals of democratic thought and the challenges of pluralism.**

In this seminar students will begin the work of how to understand the differences in human culture, values, customs, in the context of a shared humanity. With a focus on the civic environment this seminar works toward an understanding of diversity that strengthens an appreciation for democratic values and institutions as understood and articulated in The Universal Declaration of Human Rights. LAS 2 is designated as a writing-intensive General Education course. *(4 Credits)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. *(4 Credits)*

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

- LAS Elective *(4 credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (2 Credits)

Requirements

Education Core Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional

education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment.

The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 4920 - Field Experience

This course offers an opportunity for students to experience an educational environment on an

extended basis. This is a required course for all Educational Communities majors and must be taken twice. *(1-6 Credits)*

General Education Courses

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. *(4 Credits)*

LAS 7 (LAS 3110) - Global Perspectives

(4 Credits)

Physical Education K-12 and General Special Education Certification

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. *Offered every year. (4 Credits)*

ED 1000 - Issues in Professional Practice and School Law

Theatre Education K-12 and General Special Education Certification

TH 1310 - Seminar in Technical Theatre: Scenery

A concentrated course on the planning, methodology and construction of scenery for the theatre. Specific areas of study will include reading and interpreting shop drawings, basic woodworking tool use, and fundamental techniques of scenery construction. Practical application through crew work on departmental productions is stressed and required. *Offered during the first seven weeks of every fall. (2 Credits)*

TH 1320 - Seminar in Technical Theatre: Stage Lighting

A concentrated course on modern stage lighting principles and practice. Specific areas of study include electrical theory and safety, stage lighting instruments, and distribution control. Practical application through crew work on departmental productions is stressed and required. *Offered during the second seven weeks of every fall. (2 Credits)*

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified

by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

Secondary Education: English/Language Arts and General Special Education Certification

ED 1000 - Issues in Professional Practice and School Law

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). Offered every Fall. (2 Credits)

Spring

Elementary Education and General Special Education Certification

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those

standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

Physical Education K-12 General Special Education Certification

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

AND

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. *(Meets the second seven weeks of every spring semester.) Offered every spring (2 Credits)*

LAS 5 (Natural and Biological Science)

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology

and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

Theatre Education K-12 and General Special Education Certification

TH 1211 - Acting One - For Majors and Minors

This course is designed for the student who has a background in Acting. Emphasis is placed on taking this student deeper into the realm of playing which is at the heart of all acting. Students will participate in acting exercises, improvisation, monologues and scene study. *Offered during the first seven weeks of every spring. (2 Credits)*

TH 1220 - Production Management

Designed to provide students with a basic understanding of the process of theatrical production from conception to execution and evaluation. Particular emphasis is placed on the hierarchy and careers of the theatre, the process of designers, directors and actors and more detailed experience with the elements of stage management. *Offered during the second seven weeks of every spring. (2 Credits)*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards, Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems). Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory

exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

Secondary Education: Social Studies and General Special Education Certification

ED 1010 - Portfolio I

Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. Offered every fall

and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

Second Year

Fall

Elementary Education and General Special Education Certification

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

Concentration * - Education Concentration

- Concentration (Must have a minimum of 24 credits in one area - Social Studies, Science, Mathematics, or English Language Arts)

(4 Credits)

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

Physical Education K-12 General Special Education Certification

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

KI 2140 - Motor Behavior

This course provides an overview of motor development, motor learning, and motor control. Specific focus is placed on how the brain and nervous system control movement and how new movements are learned and improved. Development of fundamental movement skills as well as

applications of motor control and development to teaching and coaching of movement activities will be explored. This course includes practical components to apply key concepts introduced to the learning, evaluation, and assessment of sport and movement skills. *Offered every year. (2 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites: BI 1113-BI 1114. Offered every fall. (4 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction

across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

Theatre Education K-12 and General Special Education Certification

TH 2210 - Character Development

An acting course that emphasizes character development through role and scene analysis. Particular emphasis is placed on the scoring of the role using a variety of exercises and journal work. *Prerequisites:* TH 1210 or TH 1211. *Offered the first seven weeks every fall. (2 Credits)*

TH 2230 - Movement for the Performer

A theatrically-oriented dance course for the performer. This course explores alternative movement forms through the use of music, masks, properties and furniture. Students participate in exercises and develop presentations in an effort to experience varying and innovative techniques through which the performer can communicate. *Offered every fall. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

Secondary Education: English/Language Arts and General Special Education Certification

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a*

Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.

Secondary Education: Life Sciences and General Education Certification

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites:* MT 1510. *Offered every Fall. (4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. (4 Credits)

HS 1150 - World Civilization

Despite the apparent success of the West in the last half millennium, much of the world's achievements began or were sustained in non-Western cultures. The pre-Columbian Maya and Inca, the succession of peoples along the banks of the Tigris, Euphrates and Nile and of course China have all made remarkable contributions to the modern world as we know it long before Europeans could read or write. (4 Credits)

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

Spring

Elementary Education and General Special Education Certification

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to

inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence

the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

Concentration * - Education Concentration

- Concentration (Must have a minimum of 24 credits in one area - Social Studies, Science, Mathematics, or English Language Arts)

(4 Credits)

Physical Education K-12 General Special Education Certification

KI 2112 - Movement Instruction: Creative Movement

This skills-based course provides instruction and application of key principles and fundamentals of physical movements in rhythms and basic gymnastics. Particular focus is placed on the skill progressions appropriate in school physical education programs, after school programs, and recreation programs. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess a variety of rhythmic movements, and fundamental gymnastics skills such as tumbling. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

OR

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

OR

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140 . *Offered every year. (2 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites:* CH 2110. *Offered every Spring. (4 Credits)*

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs. (4 Credits)*

Secondary Education: Social Studies and General Special Education Certification

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

Third Year

Fall

Elementary Education and General Special Education Certification

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites: Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

Concentration * - Education Concentration

- Concentration (Must have a minimum of 24 credits in one area - Social Studies, Science, Mathematics, or English Language Arts)

(4 Credits)

Physical Education K-12 General Special Education Certification

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 3120 (SM 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence, politics, economics, gender, race and ethnicity, deviance, and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper level and writing intensive course also serves as a LAS 7 in the Liberal Arts and Sciences curriculum,, meeting both the outcomes of the departments of Kinesiology and Sport and Recreation Management, as well as those of the LAS curriculum. *Prerequisites: Minimum of 60 credits earned. Offered every fall. (4 Credits)*

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites:* KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)

- MT 1000+ College Level Math Requirement (4 Credits)

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year.* (2 Credits)

OR

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to

complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

OR

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140 . *Offered every year. (2 Credits)*

Theatre Education K-12 and General Special Education Certification

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. (*Meets the first seven weeks of every fall semester*). Offered every Fall semester. (2 Credits)

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. (4 Credits)

Secondary Education: English/Language Arts and General Special Education Certification

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the

perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Secondary Education: Life Sciences and General Education Certification

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the

environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. (4 Credits)

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls.* (4 Credits)

- Elective (4 Credits)

Secondary Education: Social Studies and General Special Education Certification

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided.* (4 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles,

employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

HS 2040 (PO 2040) - Research Methods

This course awakens the apprentice historian to the various methodologies of the historical profession. We will explore the elements of research: sources, analysis and argument, and practice the historian's craft: research, professional writing and oral (conference style) presentation. *(2 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Spring

Elementary Education and General Special Education Certification

ED 3010 - Teaching Math

This course provides students with the content knowledge needed to provide instruction in math. Mathematical reasoning, problem solving, and the use of various strategies and technology to help students acquire skills and knowledge associated with math literacy will be discussed. Students will also be exposed to current methods of teaching mathematics. There will be a focus on integrating mathematics into the other areas of the curriculum. Students will be required to spend time in a general education classroom working with teachers as they provide mathematic instruction including Response to Intervention instruction. *Prerequisites:* Must have successfully

completed ED 1000 : Issues in Professional Practice and School Law and College Level Math. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every spring. Requires a Practicum Contract with all signatures provided. (4 Credits)*

- LAS Elective *(4 Credits)*
- Elective *(3 Credits)*

Physical Education K-12 General Special Education Certification

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

- LAS Elective *(4 Credits)*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 3180 - Biomechanics

This course provides a combined theoretical and practical experience in the application of the mechanical principles of movement. Students explore and apply the mechanical principles of physics to human movement. Particular attention is given to how one develops efficiency in various movements and to the mechanical principles for instruction of physical motor skills. The focus is on the applied science as it relates to the teaching, coaching, and training of various physical skills and activities. Students will participate in the scientific analysis of movement. The course integrates athletic and health-fitness perspectives on movement training and enables students to critique and design appropriate movement skill progressions for sport or exercise. A thorough understanding and background in anatomy is essential for successful integration into this course content. *Prerequisites:* BI 2030. *Offered every spring. (4 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

OR

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

OR

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140 . *Offered every year. (2 Credits)*

Theatre Education K-12 and General Special Education Certification

TH 3240 - Directing

The goal of this course is to develop and discover an understanding of the responsibilities, resources and process of the theatrical artist known as the director through lecture, discussion and class exercise. This hands-on creative approach will explore the journey of the director from casting to production through exercises and scene work. *Offered every spring. (4 Credits)*

TH 3320 - The Design Process

An exploration of the process of theatrical production design (scenery, lighting, and costumes). Specific areas of study include design history, theory, and script analysis. *Offered the first seven weeks of every spring. (2 Credits)*

TH 4210 - Advanced Acting

Focused studies of a range of acting forms and techniques. Courses may include: Oral Interpretation of Literature, Acting for Film and Video and Period Styles. *Prerequisites:* TH 3210. *Offered every spring. (2 Credits) May be repeated for credit with different topics.*

TH 4220 - Advanced Technical Seminar

Focused studies of a range of technical topics. Courses may include: Advanced Stage Lighting, Computer Aided Drafting for the Theatre. *Prerequisites:* TH 1310 and TH 1320. *Offered every spring. (2 Credits) May be repeated for credit with different topics.*

- Elective (4 Credits)

Secondary Education: English/Language Arts and General Special Education Certification

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal, critical and contextual analysis that are crucial for those interested in a career in the arts, communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. (4 Credits)

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites:* WR 1010 and CW 1100. *This course is offered every other spring semester. (4 Credits)*

- Elective (3 Credits)
- Literature elective chosen in consultation with advisor to round out understanding of literature (4 Credits)

Secondary Education: Life Sciences and General Education Certification

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites: BI 1111-BI 1114. Offered in odd springs. (4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

- Elective *(4 Credits)*

Secondary Education: Social Studies and General Special Education Certification

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

PO 3450 - U.S. Foreign Policy

This course provides student with an opportunity to analyze American foreign policy from the perspectives of both domestic American politics and international relations. Policy with reference to the Soviet Union, the Third World, political and military allies, nuclear and conventional weapons, international organizations and human rights are considered. *(4 Credits)*

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

HS 3080 - Major Problems in Modern America

This seminar will examine the various themes and problems in American history and culture from the end of Reconstruction to the very near past. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Each student, in concert with the faculty mentor, will design and complete a problem-based individual learning plan. *(4 Credits)*

Fourth Year

Fall

Elementary Education and General Special Education Certification

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more

than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

Concentration * - Education Concentration

- Concentration (Must have a minimum of 24 credits in one area - Social Studies, Science, Mathematics, or English Language Arts)
(4 Credits)

Physical Education K-12 General Special Education Certification

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility and endurance and learn how to most efficiently condition the human body for physical activity. The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites: BI 2030, Minimum of 60 credits earned. Offered every fall. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites: Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction,*

and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Theatre Education K-12 and General Special Education Certification

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production from conception to execution and analysis. This course focuses on the Theatre Department Main

stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

- Elective (4 Credits)

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more

than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

Secondary Education: English/Language Arts and General Special Education Certification

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

Spring

ONLY IF STUDENT IS RECOMMENDED AND ELIGIBLE

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

Elementary Education and General Special Education Certification

ED 4915 - Student Teaching: Elementary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to

set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

No other courses are taken during student teaching. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to

set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

Educational Communities Suggested Course Sequence

First Year

Fall

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum*

Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the

LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. (4 Credits)

- MT 1000+ College Math Requirement (4 Credits)

Spring

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the

laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

LAS 2 (LAS 1120) - The Civic Environment - Democratic Values

An introduction to understanding the values and ideals of democratic thought and the challenges of pluralism.

In this seminar students will begin the work of how to understand the differences in human culture, values, customs, in the context of a shared humanity. With a focus on the civic environment this seminar works toward an understanding of diversity that strengthens an appreciation for democratic values and institutions as understood and articulated in The Universal Declaration of Human Rights. LAS 2 is designated as a writing-intensive General Education course. *(4 Credits)*

- Elective *(4 Credits)*

Second Year

Fall

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The

curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

- Concentration (Must have a minimum of 16 determined in consultation with your advisor and linked to your career aspiration - paraeducator, outdoor education, private school, non-profit, for example *(4 credits)*)

Spring

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. *(4 Credits)*

EDC Concentration * - ED Communities Concentration

- Concentration (Must have a minimum of four courses (16 credits) determined in consultation with advisor and linked to career aspiration - paraeducator, outdoor educator, private school, non-profit)

4 Credits

Third Year

Fall

ED 4920 - Field Experience

This course offers an opportunity for students to experience an educational environment on an extended basis. This is a required course for all Educational Communities majors and must be taken twice. (*1-6 Credits*)

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

- Elective (*4 Credits*)

EDC Concentration * - ED Communities Concentration

- Concentration (Must have a minimum of four courses (16 credits) determined in consultation with advisor and linked to career aspiration - paraeducator, outdoor educator, private school, non-profit)

4 Credits

Spring

- Concentration (Must have a minimum of 16 determined in consultation with your advisor and linked to your career aspiration - paraeducator, outdoor education, private school, non-profit, for example *(4 credits)*)

English, Comparative Literature, Creative Writing

Environmental Science

Environmental science along with environmental studies and sustainability are interdisciplinary fields that draw on information obtained from many areas of knowledge including the sciences, mathematics, philosophy, political science and economics. They are, by nature, global in scope because environmental issues transcend geopolitical boundaries. Both majors stress collaborative study with faculty, internships, and a hands-on approach while developing a working knowledge of tools specific to the field. The curriculum centers on examining how the natural world functions and the use of information from diverse sources to examine the human impact on our environment.

The study of Environmental Science focuses on developing the skills necessary to be successful in the field of environmental science. Whether you are interested in the science of understanding, monitoring, and managing the environment, working with environmental advocacy organizations, working in the field of environmental and public policy, or working in the emerging discipline of sustainability, examining how organizations, businesses, and communities are addressing the environmental issues of the 21st century-- students are prepared for employment directly after graduation or going into related advanced study and graduate programs.

Students completing the environmental science major are prepared for graduate school or employment by local, state, and federal regulatory agencies (e.g. U.S. EPA), private industry, and consulting firms. The environmental studies major is intended for students interested in careers related to environmental policy, environmental education (nature centers, parks and recreation), environmental law (pre-law), and work with non-profit organizations.

Learning Outcomes

Students completing the Environmental Sciences program should be able to:

- Demonstrate proficiency applying fundamental principles, concepts, and laws to solve real-world problems.
- Critically read, abstract, and interpret research.

- Communicate knowledge in the field orally and in writing, in a clear and effective manner.
- Write research proposals and reports in the style of the field.
- Carry out a research project in the field.
- Synthesize ideas, trends, and policies from other fields as they relate to Environmental Science and Sustainability.

Experiential Component

Environmental Science students undertake an internship experience with recognized institutions (appropriate institutions are local, state and federal agencies, private businesses, consulting firms, and conservation/environmental oriented groups). The internship is immersive by nature. Students experience operation of organization that focuses on the natural environment and quite often civic environment(s).

ES 4910 - Environmental Science and Sustainability Internship (SUS)

ES 4000 - Senior Thesis (SUS)

Major

Environmental Science, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(Total of 52 credits)

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ES 2300 - Principles of Sustainability (SUS)

An examination into the use of natural resources and the global forces and demands that influence their availability. This includes identifying major challenges facing humanity such as climate change, energy needs, population growth and loss of biodiversity. Once the underlying challenges are defined the course examines actions to be taken to ensure sustainable use of natural resources without exhausting them. How businesses and organizations are addressing sustainability is examined and how success or limitations is measured. This includes operational policies across all segments of the organization from manufacturing, use of resources and energy, transportation, communication, and what it means to "go green." Real-world case studies involving sustainability challenges, successes and shortcomings are examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 2410 - Environmental Ethics (SUS)

The extrinsic and intrinsic relationships between humans and the physical and biological world and examined in the context of understanding meaning, attitudes and value. Topics included the historical roots of the ecological crisis, conflicting views on ecological problems, ethical problems in the environment and cooperation with nature. *Offered every other Spring. (2 Credits)*

ES 2550 (EC 2550) - Environmental Economics and Management

Economics is about the allocation of scarce resources. As an introduction to economic principles applied to environmental protection, this course emphasizes economic tools used in managing the environment while also examining negative impacts of inappropriate economic development. Topics include the market economy, economic efficiency, environmental externalities, open access resources, government regulation of the economy, alternative measures of economic output, benefit-cost analysis, and global sustainable development. *Offered every other Spring. (2 Credits)*

ES 3000 - Careers in Environmental Science (SUS)

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the fields under the NSM Collegium. There will be activities addressing: self-assessment of personal attributes, potential career paths,

resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every Spring. (1 Credit)*

ES 3255 - Environmental Policy (SUS)

An examination of how natural resources are managed and protected as well as how policy is developed, evaluated and implemented. The role of government and private entities are considered along with the political challenges in establishing and maintaining sustainable use of natural resources in the face of population growth, escalating demand for energy and water, and competing uses of diminishing resources. Governmental policies and regulations will be contrasted with market driven initiatives and strategies in evaluating effective policy formulation and implementation. Use of real-world case studies involving policy challenges, successes and shortcomings will be examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 3300 - Environmental Research Methods (SUS)

This course examines basic experimental and sampling design of research studies and experiments. Students will select and conduct experiments from problem formulation and hypothesis identification to data collection, statistical analysis, report writing and presentation of results. This will include the application of statistics, critical thinking, hypothesis testing, modeling, surveys and measurements and studies utilizing experimental treatments and controls. Completion of MT 2310 Statistics is recommended but not required. *Prerequisites: ES 1110 and completion of 45 credits Offered every other Fall. (4 Credits)*

ES 4000 - Senior Thesis (SUS)

Students are required to complete a 4 credit capstone course using the skills and knowledge gained from their experience in the Natural and Social Sciences (NSS). This involves developing a project or thesis that includes a literature review, critical thinking, data collection and analysis, written communication, oral communication, and project management. It is generally completed over two semesters as a 2 credit course each semester. During the fall semester students identify a thesis advisor and develop a thesis proposal in a topic related to their major. During the spring semester students will complete and report on the thesis. Because the experience is tailored to each student's needs all 4 credits can be completed in a single semester with permission from the

instructor. *Prerequisites: 75 credits earned and either be an Environmental Science or an Environmental Studies and Sustainability Major. Offered every semester. (2 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites: BI 1111-BI 1112. Offered every other Fall. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites:* MT 1510. *Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites:* CH 2110. *Offered every Spring. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester. (4 Credits)*

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration. Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1510 *Offered every year. (4 Credits)*

Take one from the following list

ES 4910 - Environmental Science and Sustainability Internship (SUS)

An internship experience with recognized institutions, when available, is undertaken by qualified students on a semester, year, or summer basis. Appropriate institutions are local, state and federal agencies, private businesses, and conservation/environmental oriented groups. *Contract required. (Variable credit 1-15) May be repeated for credit.*

ES 4830 - Independent Study in Environmental Science (SUS)

Advanced, independent study of a specific topic arranged with a faculty member. *Contract required. (Variable credit 1-4) May be repeated for credit.*

ES 4810 - Directed Study in Environmental Science (SUS)

This course of study to be arranged between faculty and student. *Contract required. (Variable credit 1-4) May be repeated for credit.*

Electives

Students must complete 3 courses from the following list of courses.

ES 1120 - Environmental Science Practicum (SUS)

This practicum in environmental science enables students to have a practical hands-on experience. It is tailored to the student's interest in the environmental field, focusing on local or regional issues or projects. Evaluation is based on a portfolio generated by student documenting the learning experience and primary outcomes of the practicum. *Offered upon demand. Contract required. (2 Credits)*

ES 1200 - Sustainable Gardening (SUS)

An introduction to the structure, growth, and classification of plants in specific applications

including the techniques of controlling plant environments and plant growth and emphasis on practical aspects of plant production. Students will learn to grow plants using organic alternatives to synthetic commercial fertilizers, pesticides or fungicides. Soil texture and composition, organisms, and amendments are examined with a focus on the NEC/Henniker Community Garden for raising and harvesting produce and/or on campus landscaping. Extensive work is required in the College Greenhouse and the Henniker campus. *Offered upon demand. (2 Credits)*

ES 2010 (BU 2010) - Intro to Excel Programming

This course builds on a basic knowledge of using Excel in the context of data analysis, data processing and building simple financial models. Students will be asked to develop proforma income statements and develop cost benefit analysis. Through the preparation of various spreadsheets students will become familiar with formulas, functions, and tools within Excel. No prior accounting knowledge required. Experience in using Excel recommended. *Offered every other Fall. (2 Credits)*

ES 2990 - Topics in Environmental Science (SUS)

An introduction to current environmental topics. Topics offered in the past include: conflict/interaction between humans and nature in New England, renewable energy, environment and health, hazardous waste, environmental law, management of forest/wildlife. *(Variable Credits 2-4) May be repeated for credit with different topics.*

ES 3350 - Introduction to Soil Science (SUS)

The nature and properties (chemical, physical, and biological) of soil are examined along with the importance of soil as a resource is assessed from multiple perspectives, including: ecosystem processing, nutrient cycling, agricultural land use, and pollution control.

Prerequisites: ES 1110 or BI 1110 or CH 2510.

Offered every other Fall. (2 Credits)

ES 3550 - Water Resources (SUS)

Fundamentals of water resource planning and design, with emphasis on management of

community water resources, such as public water supply and wastewater disposal. Topics include transmission and distribution, groundwater, storm drainage, water quality, and selection of appropriate technologies (such as for less developed regions). *Prerequisites: ES 1110 Offered every other Fall. (2 Credits)*

ES 3655 - Solid Waste Management (SUS)

Principles and practices of estimating the demand, types, and strategies for handling solid waste are thoroughly discussed. Alternative methods for managing solid waste generation and disposition in the private as well as public sector are covered. Case studies of innovative strategies and technologies developed by other regions are explored. Applications of selected technologies, such as composting, are put into practice. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 3850 - Geographic Information Systems (SUS)

Using Geographic Information Systems (GIS) professionals in almost any field can investigate data spatially, through mapping. Questions might include... Where does my customer base live? Which drinking water wells are most at risk from hazardous material storage? How does residential proximity to trails impact physical activity? This course introduces students to the basics of GIS for use in any application, including natural resource inventory, marketing, social and human resource management, economic and/or public policy analysis, etc. *Prerequisites: ES 1110 Offered every Spring. (2 Credits)*

ES 4680 - Energy and the Environment (SUS)

This course explores the basic principles behind the use of energy. It covers crucial environmental questions such as global warming, municipal solid waste, and the socio-economic and environmental tradeoffs that must be made to support life on earth. The course also examines different aspects of each energy resource, including the principles involved and the environmental and economic consequences of its use. We will seek to integrate the complex questions of energy policy and possible energy strategies for the next century and beyond. Sustainability is a central theme. *Offered every other Fall. (2 Credits)*

Environmental Science Minor

- Description and Learning Outcomes

Requirements

(Total of 20 Credits)

ES 1110 - Environmental Science: A Global Concern (SUS)

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, global warming, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques used to examine the natural environment. *Offered every semester. (4 Credits)*

CH 2010 - Introduction to Chemistry

This is a course for students who have not previously studied chemistry. Chemical concepts are introduced and applied to the real-world societal problems and issues that have significant chemical content such as the relationship between chemistry and environmental issues concerning air, energy, water and the global climate change as well as biological issues such as genetic engineering, designer drugs and nutrition. Chemistry is a hands-on science and the learning activities are integral part of the course and include experiments during the laboratory period and in class. The course also demonstrates use of library and Internet resources for information gathering for decision-making activities and responsible citizen stewardship of our natural resources. *Prerequisites: MT 1020 or MT 1100. Offered every other Fall. (4 Credits)*

ES 2300 - Principles of Sustainability (SUS)

An examination into the use of natural resources and the global forces and demands that influence their availability. This includes identifying major challenges facing humanity such as climate change, energy needs, population growth and loss of biodiversity. Once the underlying challenges are defined the course examines actions to be taken to ensure sustainable use of natural resources without exhausting them. How businesses and organizations are addressing

sustainability is examined and how success or limitations is measured. This includes operational policies across all segments of the organization from manufacturing, use of resources and energy, transportation, communication, and what it means to "go green." Real-world case studies involving sustainability challenges, successes and shortcomings are examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 2410 - Environmental Ethics (SUS)

The extrinsic and intrinsic relationships between humans and the physical and biological world and examined in the context of understanding meaning, attitudes and value. Topics included the historical roots of the ecological crisis, conflicting views on ecological problems, ethical problems in the environment and cooperation with nature. *Offered every other Spring. (2 Credits)*

Complete 4 credits of the following courses:

(not more than one of these can be a 4 credit course)

ES 1200 - Sustainable Gardening

An introduction to the structure, growth, and classification of plants in specific applications including the techniques of controlling plant environments and plant growth and emphasis on practical aspects of plant production. Students will learn to grow plants using organic alternatives to synthetic commercial fertilizers, pesticides or fungicides. Soil texture and composition, organisms, and amendments are examined with a focus on the NEC/Henniker Community Garden for raising and harvesting produce and/or on campus landscaping. Extensive work is required in the College Greenhouse and the Henniker campus. *Offered upon sufficient demand. (2 Credits)*

ES 1120 - Environmental Science Practicum (SUS)

This practicum in environmental science enables students to have a practical hands-on experience. It is tailored to the student's interest in the environmental field, focusing on local or regional issues or projects. Evaluation is based on a portfolio generated by student documenting the learning experience and primary outcomes of the practicum. *Offered upon demand. Contract required. (2 Credits)*

ES 2550 (EC 2550) - Environmental Economics and Management

Economics is about the allocation of scarce resources. As an introduction to economic principles applied to environmental protection, this course emphasizes economic tools used in managing the environment while also examining negative impacts of inappropriate economic development. Topics include the market economy, economic efficiency, environmental externalities, open access resources, government regulation of the economy, alternative measures of economic output, benefit-cost analysis, and global sustainable development. *Offered every other Spring. (2 Credits)*

ES 2990 - Topics in Environmental Science (SUS)

An introduction to current environmental topics. Topics offered in the past include: conflict/interaction between humans and nature in New England, renewable energy, environment and health, hazardous waste, environmental law, management of forest/wildlife. *(Variable Credits 2-4) May be repeated for credit with different topics.*

ES 3850 - Geographic Information Systems (SUS)

Using Geographic Information Systems (GIS) professionals in almost any field can investigate data spatially, through mapping. Questions might include... Where does my customer base live? Which drinking water wells are most at risk from hazardous material storage? How does residential proximity to trails impact physical activity? This course introduces students to the basics of GIS for use in any application, including natural resource inventory, marketing, social and human resource management, economic and/or public policy analysis, etc. *Prerequisites: ES 1110 Offered every Spring. (2 Credits)*

ES 4680 - Energy and the Environment (SUS)

This course explores the basic principles behind the use of energy. It covers crucial environmental questions such as global warming, municipal solid waste, and the socio-economic and environmental tradeoffs that must be made to support life on earth. The course also examines different aspects of each energy resource, including the principles involved and the environmental and economic consequences of its use. We will seek to integrate the complex

questions of energy policy and possible energy strategies for the next century and beyond. Sustainability is a central theme. *Offered every other Fall. (2 Credits)*

ES 3255 - Environmental Policy (SUS)

An examination of how natural resources are managed and protected as well as how policy is developed, evaluated and implemented. The role of government and private entities are considered along with the political challenges in establishing and maintaining sustainable use of natural resources in the face of population growth, escalating demand for energy and water, and competing uses of diminishing resources. Governmental policies and regulations will be contrasted with market driven initiatives and strategies in evaluating effective policy formulation and implementation. Use of real-world case studies involving policy challenges, successes and shortcomings will be examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 3350 - Introduction to Soil Science (SUS)

The nature and properties (chemical, physical, and biological) of soil are examined along with the importance of soil as a resource is assessed from multiple perspectives, including: ecosystem processing, nutrient cycling, agricultural land use, and pollution control.

Prerequisites: ES 1110 or BI 1110 or CH 2510.

Offered every other Fall. (2 Credits)

ES 3655 - Solid Waste Management (SUS)

Principles and practices of estimating the demand, types, and strategies for handling solid waste are thoroughly discussed. Alternative methods for managing solid waste generation and disposition in the private as well as public sector are covered. Case studies of innovative strategies and technologies developed by other regions are explored. Applications of selected technologies, such as composting, are put into practice. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 3550 - Water Resources (SUS)

Fundamentals of water resource planning and design, with emphasis on management of

community water resources, such as public water supply and wastewater disposal. Topics include transmission and distribution, groundwater, storm drainage, water quality, and selection of appropriate technologies (such as for less developed regions). *Prerequisites: ES 1110 Offered every other Fall. (2 Credits)*

- ES 2550 (EC 2550) - Environmental Economics and Management

ES 3300 - Environmental Research Methods (SUS)

This course examines basic experimental and sampling design of research studies and experiments. Students will select and conduct experiments from problem formulation and hypothesis identification to data collection, statistical analysis, report writing and presentation of results. This will include the application of statistics, critical thinking, hypothesis testing, modeling, surveys and measurements and studies utilizing experimental treatments and controls. Completion of MT 2310 Statistics is recommended but not required. *Prerequisites: ES 1110 and completion of 45 credits Offered every other Fall. (4 Credits)*

ES 2070 (BI 2070) - New England Natural History (SUS)

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites: BI 1111-BI 1112 or ES 1110 Offered every other Fall. (4 Credits)*

Other Programs

Environmental Science Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern (SUS)

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, global warming, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques used to examine the natural environment. *Offered every semester. (4 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

- ES Elective

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

ES 2410 - Environmental Ethics (SUS)

The extrinsic and intrinsic relationships between humans and the physical and biological world and examined in the context of understanding meaning, attitudes and value. Topics included the historical roots of the ecological crisis, conflicting views on ecological problems, ethical problems in the environment and cooperation with nature. *Offered every other Spring. (2 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include:

sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

Spring

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the

performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

- BU 1010 - Excel Programming

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration. Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1510 Offered every year. (4 Credits)*

ES 2300 - Principles of Sustainability (SUS)

An examination into the use of natural resources and the global forces and demands that influence their availability. This includes identifying major challenges facing humanity such as climate change, energy needs, population growth and loss of biodiversity. Once the underlying challenges are defined the course examines actions to be taken to ensure sustainable use of natural resources without exhausting them. How businesses and organizations are addressing sustainability is examined and how success or limitations is measured. This includes operational policies across all segments of the organization from manufacturing, use of resources and energy, transportation, communication, and what it means to "go green." Real-world case studies involving sustainability challenges, successes and shortcomings are examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 2550 (EC 2550) - Environmental Economics and Management

Economics is about the allocation of scarce resources. As an introduction to economic principles applied to environmental protection, this course emphasizes economic tools used in managing the environment while also examining negative impacts of inappropriate economic development. Topics include the market economy, economic efficiency, environmental externalities, open access resources, government regulation of the economy, alternative measures of economic output, benefit-cost analysis, and global sustainable development. *Offered every other Spring. (2 Credits)*

Third Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

ES 3300 - Environmental Research Methods (SUS)

This course examines basic experimental and sampling design of research studies and experiments. Students will select and conduct experiments from problem formulation and hypothesis identification to data collection, statistical analysis, report writing and presentation of results. This will include the application of statistics, critical thinking, hypothesis testing, modeling, surveys and measurements and studies utilizing experimental treatments and controls. Completion of MT 2310 Statistics is recommended but not required. *Prerequisites: ES 1110 and completion of 45 credits Offered every other Fall. (4 Credits)*

ES 3255 - Environmental Policy (SUS)

An examination of how natural resources are managed and protected as well as how policy is developed, evaluated and implemented. The role of government and private entities are considered along with the political challenges in establishing and maintaining sustainable use of natural resources in the face of population growth, escalating demand for energy and water, and competing uses of diminishing resources. Governmental policies and regulations will be

contrasted with market driven initiatives and strategies in evaluating effective policy formulation and implementation. Use of real-world case studies involving policy challenges, successes and shortcomings will be examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

Spring

- Computer Course

ES 3000 - Careers in Environmental Science (SUS)

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the fields under the NSM Collegium. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every Spring. (1 Credit)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

- Internship/Ind. Study
- ES Elective

4th Year

Fall

ES 4000 - Senior Thesis (SUS)

Students are required to complete a 4 credit capstone course using the skills and knowledge gained from their experience in the Natural and Social Sciences (NSS). This involves developing a project or thesis that includes a literature review, critical thinking, data collection and analysis, written communication, oral communication, and project management. It is generally completed over two semesters as a 2 credit course each semester. During the fall semester students identify a thesis advisor and develop a thesis proposal in a topic related to their major. During the spring semester students will complete and report on the thesis. Because the experience is tailored to each student's needs all 4 credits can be completed in a single semester with permission from the instructor. *Prerequisites: 75 credits earned and either be an Environmental Science or an Environmental Studies and Sustainability Major. Offered every semester. (2 Credits)*

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites: BI 1111-BI 1112. Offered every other Fall. (4 Credits)*

- Elective

Spring

Environmental Studies and Sustainability

Environmental science along with environmental studies and sustainability are interdisciplinary fields that draw upon information obtained from many areas of knowledge including the sciences, mathematics, philosophy, political science and economics. They are, by nature, global in scope because environmental issues transcend geopolitical boundaries. Both majors stress

collaborative study with faculty, internships, and a hands-on approach while developing a working knowledge of tools specific to the field. The curriculum centers on examining how the natural world functions and the use of information from diverse sources to examine the human impact on our environment.

The Environmental Studies and Sustainability program focuses on developing the skills necessary to be successful in the field of environmental studies and sustainability. Whether you are interested in working with environmental advocacy organizations, working in the field of environmental and public policy, or working in the emerging discipline of sustainability, examining how organizations, businesses, and communities are addressing the environmental issues of the 21st century-- students are prepared for employment directly after graduation or going into related advanced study and graduate programs.

The Environmental Studies major is intended for students interested in careers related to environmental policy, environmental education (nature centers, parks and recreation), environmental law (pre-law), and work with non-profit organizations.

Learning Outcomes

Students completing the Environmental Studies and Sustainability program in the B.A. track should be able to:

- Demonstrate proficiency applying fundamental principles, concepts and laws to solve real-world problems.
- Critically read, abstract and interpret research.
- Communicate knowledge in the field orally and in writing, in a clear and effective manner.
- Write research proposals and reports in the style of the field.
- Carry out a research project in the field.
- Synthesize ideas, trends, and policies from other fields as they relate to Environmental Science and Sustainability.

Major

Environmental Studies and Sustainability, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(Total of 40 Credits)

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ES 2300 - Principles of Sustainability

An examination into the use of natural resources and the global forces and demands that influence their availability. This includes identifying major challenges facing humanity such as climate change, energy needs, population growth and loss of biodiversity. Once the underlying challenges are defined the course examines actions to be taken to ensure sustainable use of natural resources without exhausting them. How businesses and organizations are addressing sustainability is examined and how success or limitations is measured. This includes operational policies across all segments of the organization from manufacturing, use of resources and energy, transportation, communication, and what it means to "go green." This includes the use of real-world case studies involving sustainability challenges, successes and shortcomings are examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

ES 2410 - Environmental Ethics

The extrinsic and intrinsic relationships between humans and the physical and biological world and examined in the context of understanding meaning, attitudes and value. Topics include the historical roots of the ecological crisis, conflicting views on ecological problems, ethical problems in the environment and cooperation with nature. *Offered every other Spring. (2 Credits)*

ES 2550 (EC 2550) - Environmental Economics and Management (SUS)

Economics is about the allocation of scarce resources. As an introduction to economic principles applied to environmental protection, this course emphasizes economic tools used in managing

the environment while also examining negative impacts of inappropriate economic development. Topics include the market economy, economic efficiency, environmental externalities, open access resources, government regulation of the economy, alternative measures of economic output, benefit-cost analysis, and global sustainable development. *Offered every other Spring. (2 Credits)*

ES 3000 - Careers in Environmental Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the fields under the NSM Collegium. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every Spring. (1 Credit)*

ES 3255 - Environmental Policy

An examination of how natural resources are managed and protected as well as how policy is developed, evaluated and implemented. The role of government and private entities are considered along with the political challenges in establishing and maintaining sustainable use of natural resources in the face of population growth, escalating demand for energy and water, and competing uses of diminishing resources. Governmental policies and regulations will be contrasted with market driven initiatives and strategies in evaluating effective policy formulation and implementation. Use of real-world case studies involving policy challenges, successes and shortcomings will be examined. *Prerequisites: ES 1110. Offered every other Spring. (2 Credits)*

ES 3300 - Environmental Research Methods

This course examines basic experimental and sampling design of research studies and experiments. Students will select and conduct experiments from problem formulation and hypothesis identification to data collection, statistical analysis, report writing and presentation of results. This will include the application of statistics, critical thinking, hypothesis testing, modeling, use surveys and measurements and studies utilizing experimental treatments and controls. Completion of MT 2310 Statistics is recommended but not required. *Prerequisites: ES 1110 and completions of 45 credits Offered every other Fall. (4 Credits)*

ES 4000 - Senior Thesis

Students are required to complete a 4 credit capstone course using the skills and knowledge gained from their experience in the Natural and Social Sciences (NSS). This involves developing a project or thesis that includes a literature review, critical thinking, data collection and analysis, written communication, oral communication, and project management. It is generally completed over two semesters as a 2 credit course each semester. During the fall semester students identify a thesis advisor and develop a thesis proposal in a topic related to their major. During the spring semester students will complete and report on the thesis. Because the experience is tailored to each student's needs, all 4 credits can be completed in a single semester with permission from the instructor. *Prerequisites: 75 Credits Earned and either be Environmental Science or an Environmental Studies and Sustainability Major. Offered every semester. (2 Credits)*

Take one from the following list

ES 4910 - Environmental Science and Sustainability Internship

An internship experience with recognized institutions, when available, is undertaken by qualified students on a semester, year, or summer basis. Appropriate institutions are local, state and federal agencies, private businesses, and conservation/environmental oriented groups. *Contract required. (Variable credit 1-16) May be repeated for credit.*

ES 4830 - Independent Study in Environmental Science

Advanced, independent study of a specific topic arranged with a faculty member. *Contract required. (Variable credit 1-4)*

ES 4810 - Directed Study in Environmental Science

This course of study to be arranged between faculty and student. *Contract required. (Variable credit 1-4) May be repeated for credit.*

CH 2010 - Introduction to Chemistry

This is a course for students who have not previously studied chemistry. Chemical concepts are introduced and applied to the real-world societal problems and issues that have significant chemical content such as the relationship between chemistry and environmental issues concerning air, energy, water and the global climate change as well as biological issues such as genetic engineering, designer drugs and nutrition. Chemistry is a hands-on science and the learning activities are integral part of the course and include experiments during the laboratory period and in class. The course also demonstrates use of library and Internet resources for information gathering for decision-making activities and responsible citizen stewardship of our natural resources. *Prerequisites:* MT 1020 or MT 1100. *Offered every other Fall. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester. (4 Credits)*

Electives

Students must complete 4 courses from the following list of courses:

ES 1120 - Environmental Science Practicum

This practicum in environmental science enables students to have a practical hands-on experience. It is tailored to the student's interest in the environmental field, focusing on local or regional issues or projects. Evaluation is based on a portfolio generated by student documenting the learning experience and primary outcomes of the practicum. *Offered upon demand. Contract required. (2 Credits)*

ES 1200 - Sustainable Gardening

An introduction to the structure, growth, and classification of plants in specific applications including the techniques of controlling plant environments and plant growth and emphasis on practical aspects of plant production. Students will learn to grow plants using organic alternatives to synthetic commercial fertilizers, pesticides or fungicides. Soil texture and composition, organisms, and amendments are examined with a focus on the NEC/Henniker Community Garden for raising and harvesting produce and/or on campus landscaping. Extensive work is required in the College Greenhouse and the Henniker campus. *Offered upon sufficient demand. (2 Credits)*

ES 2990 - Topics in Environmental Science

An introduction to current environmental topics. Topics offered in the past include: conflict/interaction between humans and nature in New England, renewable energy, environment and health, hazardous waste, environmental law, management of forest/wildlife. *(Variable Credit 2-4) May be repeated for credit with different topics*

ES 3350 - Introduction to Soil Science

The nature and properties (chemical, physical, and biological) of soil are examined along with the importance of soil as a resource is assessed from multiple perspectives, including: ecosystem processing, nutrient cycling, agricultural land use, and pollution control. *Prerequisites: ES 1110 or BI 1110 OR CH 2510 Offered every other Fall. (2 Credits)*

ES 3550 - Water Resources

Fundamentals of water resource planning and design, with emphasis on management of community water resources, such as public water supply and wastewater disposal. Topics include transmission and distribution, groundwater, storm drainage, water quality, and selection of appropriate technologies (such as for less developed regions). *Prerequisites: ES 1110 Offered every other Fall. (2 Credits)*

ES 3655 - Solid Waste Management

Principles and practices of estimating the demand, types, and strategies for handling solid waste are thoroughly discussed. Alternative methods for managing solid waste generation and disposition in the private as well as public sector are covered. Case studies of innovative strategies and technologies developed by other regions are explored. Applications of selected technologies, such as composting, are put into practice. Prerequisites: ES 1110 *Offered every other Spring. (2 Credits)*

ES 3850 - Geographic Information Systems

Using Geographic Information Systems (GIS) professionals in almost any field can investigate data spatially, through mapping. Questions might include... Where does my customer base live? Which drinking water wells are most at risk from hazardous material storage? How does residential proximity to trails impact physical activity? This course introduces students to the basics of GIS for use in any application, including natural resource inventory, marketing, social and human resource management, economic and/or public policy analysis, etc. *Prerequisites: ES 1110. Offered every other Spring. (2 Credits)*

ES 4680 - Energy and the Environment

This course explores the basic principles behind the use of energy. It covers crucial environmental questions such as global warming, municipal solid waste, and the socio-economic and environmental tradeoffs that must be made to support life on earth. The course also examines different aspects of each energy resource, including the principles involved and the environmental and economic consequences of its use. We will seek to integrate the complex questions of energy policy and possible energy strategies for the next century and beyond. Sustainability is a central theme. *Offered every other Fall. (2 Credits)*

ES 2070 (BI 2070) - New England Natural History (SUS)

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both

terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites: BI 1111-BI 1112 or ES 1110 Offered every other Fall. (4 Credits)*

Experiential Component

Environmental Science and Sustainability students in both the B.A. and B.S. track undertake an internship experience with recognized institutions (appropriate institutions are local, state and federal agencies, private businesses, consulting firms, and conservation/environmental oriented groups). The internship is immersive by nature. Students experience operation of organization that focuses on the natural environment and quite often civic environment(s).

ES 4910 - Environmental Science and Sustainability Internship

An internship experience with recognized institutions, when available, is undertaken by qualified students on a semester, year, or summer basis. Appropriate institutions are local, state and federal agencies, private businesses, and conservation/environmental oriented groups. *Contract required. (Variable credit 1-16) May be repeated for credit.*

ES 4000 - Senior Thesis

Students are required to complete a 4 credit capstone course using the skills and knowledge gained from their experience in the Natural and Social Sciences (NSS). This involves developing a project or thesis that includes a literature review, critical thinking, data collection and analysis, written communication, oral communication, and project management. It is generally completed over two semesters as a 2 credit course each semester. During the fall semester students identify a thesis advisor and develop a thesis proposal in a topic related to their major. During the spring semester students will complete and report on the thesis. Because the experience is tailored to each student's needs, all 4 credits can be completed in a single semester with permission from the instructor. *Prerequisites: 75 Credits Earned and either be Environmental Science or an Environmental Studies and Sustainability Major. Offered every semester. (2 Credits)*

Other Programs

Environmental Studies and Sustainability, B.A. Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates

throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the

human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

ES 2410 - Environmental Ethics

The extrinsic and intrinsic relationships between humans and the physical and biological world and examined in the context of understanding meaning, attitudes and value. Topics include the historical roots of the ecological crisis, conflicting views on ecological problems, ethical problems in the environment and cooperation with nature. *Offered every other Spring. (2 Credits)*

ES 2300 - Principles of Sustainability

An examination into the use of natural resources and the global forces and demands that influence their availability. This includes identifying major challenges facing humanity such as climate change, energy needs, population growth and loss of biodiversity. Once the underlying challenges are defined the course examines actions to be taken to ensure sustainable use of natural resources without exhausting them. How businesses and organizations are addressing sustainability is examined and how success or limitations is measured. This includes operational policies across all segments of the organization from manufacturing, use of resources and energy, transportation, communication, and what it means to "go green." This includes the use of real-world case studies involving sustainability challenges, successes and shortcomings are examined. *Prerequisites: ES 1110 Offered every other Spring. (2 Credits)*

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception,

execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

CH 2010 - Introduction to Chemistry

This is a course for students who have not previously studied chemistry. Chemical concepts are introduced and applied to the real-world societal problems and issues that have significant chemical content such as the relationship between chemistry and environmental issues concerning air, energy, water and the global climate change as well as biological issues such as genetic engineering, designer drugs and nutrition. Chemistry is a hands-on science and the learning activities are integral part of the course and include experiments during the laboratory period and in class. The course also demonstrates use of library and Internet resources for information gathering for decision-making activities and responsible citizen stewardship of our natural resources. *Prerequisites: MT 1020 or MT 1100. Offered every other Fall. (4 Credits)*

- Elective
- Elective

Spring

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing

context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

ES 3300 - Environmental Research Methods

This course examines basic experimental and sampling design of research studies and experiments. Students will select and conduct experiments from problem formulation and hypothesis identification to data collection, statistical analysis, report writing and presentation of results. This will include the application of statistics, critical thinking, hypothesis testing, modeling, use surveys and measurements and studies utilizing experimental treatments and controls. Completion of MT 2310 Statistics is recommended but not required. *Prerequisites: ES 1110 and completions of 45 credits Offered every other Fall. (4 Credits)*

ES 2550 (EC 2550) - Environmental Economics and Management (SUS)

Economics is about the allocation of scarce resources. As an introduction to economic principles applied to environmental protection, this course emphasizes economic tools used in managing the environment while also examining negative impacts of inappropriate economic development. Topics include the market economy, economic efficiency, environmental externalities, open access resources, government regulation of the economy, alternative measures of economic output, benefit-cost analysis, and global sustainable development. *Offered every other Spring. (2 Credits)*

ES 3255 - Environmental Policy

An examination of how natural resources are managed and protected as well as how policy is developed, evaluated and implemented. The role of government and private entities are considered along with the political challenges in establishing and maintaining sustainable use of natural resources in the face of population growth, escalating demand for energy and water, and competing uses of diminishing resources. Governmental policies and regulations will be contrasted with market driven initiatives and strategies in evaluating effective policy formulation and implementation. Use of real-world case studies involving policy challenges, successes and shortcomings will be examined. *Prerequisites: ES 1110. Offered every other Spring. (2 Credits)*

- Elective

Third Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

- ES Elective
- Elective
- Elective

Spring

- ES Elective

ES 4910 - Environmental Science and Sustainability Internship

An internship experience with recognized institutions, when available, is undertaken by qualified students on a semester, year, or summer basis. Appropriate institutions are local, state and federal agencies, private businesses, and conservation/environmental oriented groups. *Contract required. (Variable credit 1-16) May be repeated for credit.*

- NSM 3000 - Careers in Science
- Elective

4th Year

Fall

ES 4000 - Senior Thesis

Students are required to complete a 4 credit capstone course using the skills and knowledge gained from their experience in the Natural and Social Sciences (NSS). This involves developing a project or thesis that includes a literature review, critical thinking, data collection and analysis, written communication, oral communication, and project management. It is generally completed over two semesters as a 2 credit course each semester. During the fall semester students identify a thesis advisor and develop a thesis proposal in a topic related to their major. During the spring semester students will complete and report on the thesis. Because the experience is tailored to each student's needs, all 4 credits can be completed in a single semester with permission from the instructor. *Prerequisites: 75 Credits Earned and either be Environmental Science or an Environmental Studies and Sustainability Major. Offered every semester. (2 Credits)*

Health Science

The two main goals of the Health Science major are

1. to prepare majors for professional programs and/or careers in the health sciences or medicine and
2. to inform students of the methods of science as a tool for understanding the natural world.

Recent graduates from our department have successfully entered and completed many graduate and professional degree programs including ones in pharmacy, medicine, physical therapy, physician's assistant, dentistry, nutrition, athletic training, nursing, and forensics science.

All students in the Health Science program begin their training with a common set of core classes that include introductions to biology, chemistry, physics, and math. The Health Science student will work closely with an advisor on an appropriate set of courses in a recommended pre-professional track such as pre-physical therapy, pre-pharmacy, pre-vet, pre-nursing and pre-physician assistant. NEC has articulations agreements with Massachusetts College of Pharmacy and Health Science in masters of Physician Assistant (MPA) program, Pharmacy (PharmD) and a bachelor program in Science Nursing in (BSN). Entrance into these programs requires the student to complete the application process.

Learning Outcomes

Students completing the Health Science major should be able to:

- Know, understand and apply a broad range of basic biological concepts.
- Master applied laboratory skills.
- Apply mathematics to the field (i.e., statistical analysis).
- Understand the process of science and basic assumptions in the discipline.
- Think critically when reading and writing about research in the field.
- Generate hypotheses, design approaches to test them, and interpret data to reach valid conclusions.
- Communicate knowledge in an effective oral presentation.
- Demonstrate the ability to organize and write quality reports in the sciences.
- Demonstrate the ability to work effectively and responsibly with others.
- Demonstrate adherence to accepted standards of professional and ethical behavior.

As part of the Senior Thesis all majors are required to conduct their own research projects under the guidance of the Health Science faculty. Students are also encouraged to engage in more extensive research projects throughout their time in the major. New England College is located

in a pristine natural setting with diverse terrestrial and aquatic habitats that are available for research and field studies. In addition, on-campus facilities and equipment as well as off-campus affiliations are available for student research.

Health Science majors are encouraged to participate in internships and/or volunteer to further their career and personal development. There are numerous local internship and volunteer opportunities in private, state, and federal agencies, as well as non-profit organizations. Additional opportunities exist at hospitals, animal rehabilitation facilities, and professional medical offices.

The Sophomore Review

Upon completion of BI 1111 - General Biology - Biodiversity, Evolution and Ecology to BI 1114 - General Biology - Cellular Biology and one semester of CH 2110 - General Chemistry I, all Health Science majors will meet with the Health Science faculty advisors. The purpose of this review is to identify, early in the student's career, potential strengths and weaknesses, to assist the student in clarifying his or her goals and to advise the student on an appropriate course of study.

Experiential Learning Component

For a science major, the act of doing science is fundamental to fully integrating the content contained in courses. Most of the courses in this major have a laboratory component that stresses experiential learning in the field and/or in the laboratory. These experiences include activities that range from a single laboratory session to an entire year (in the case of the Senior Thesis).

Furthermore, several classes include a public presentation component that is either done in the NEC community or even at professional scientific conferences. External funding, such as the current IDeA Network of Biological Research Excellent [NH-INBRE] grant, also facilitates infusion of research into the curriculum, as well as providing research opportunities outside of standard coursework. These research experiences can range from a few hours of work in the lab each week to intensive 10-week long summer research experiences.

Major

Health Science, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Core Requirements

Grades of C-or better are required in all courses needed for the Health Science major, including chemistry and mathematics. Any two modules of General Biology (BI 1111-BI 1114) will satisfy the LAS 2130 requirement for Biology, Health Science, and Kinesiology students.

BI 1020 - Foundations of Nutrition

An introduction to the basic concepts of nutrition, their application to the functions of carbohydrates, fats, proteins, minerals, and vitamins; the function and role of nutrients on health; and identification of substances in the diet which may adversely affect the body. *Offered every spring. (4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. *(Meets the second seven weeks of every spring semester.) Offered every spring (2 Credits)*

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites: BI 1113-BI 1114. Offered every fall. (4 Credits)*

BI 2040 - Human Anatomy & Physiology II

This is a continuation of BI 2030, Human Anatomy and Physiology I. This course concludes discussion of organ systems in humans, including the senses, hormonal control, and the integumentary, immune, digestive, urinary, and reproductive systems. *Prerequisites: BI 1113-BI 1114. Offered every spring. (4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites:* MT 1510. *Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites:* CH 2110. *Offered every Spring. (4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation.

Prerequisites: MT 1510. (4 Credits)

Required Electives

Students take 3 courses from the lists below that support their choice of preprofessional track. Completion of the listed electives may be required for some graduate schools. Students interested in pursuing a graduate degree are encouraged to meet with their advisor to discuss the appropriate course selections.

Recommended electives For Pre-Master's In Physician Assistant Studies

- BI 2110 - Genetics

CH 3310 - Organic Chemistry I

A study of carbon compounds by functional groups including the correlation of chemical and physical properties with structure, reaction mechanisms, and methods of synthesis. The laboratory portion emphasizes the microscale techniques. *Prerequisites: CH 2120. (4 Credits)*

CH 3330 - Biochemistry

This course explores the roles of essential biological molecules focusing on proteins, lipids and carbohydrates. Students examine the structure of proteins, their function, and their association

with other molecules. Protein purification and enzyme kinetics will be explored in the laboratory.

Prerequisites: CH 3310. (4 Credits)

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

Recommended electives For Pre- Doctorate in Pharmacy

CH 3310 - Organic Chemistry I

A study of carbon compounds by functional groups including the correlation of chemical and physical properties with structure, reaction mechanisms, and methods of synthesis. The laboratory portion emphasizes the microscale techniques. *Prerequisites:* CH 2120. (4 Credits)

CH 3320 - Organic Chemistry II

A continuation of CH 3310 - Organic Chemistry I. A study of additional functional groups and spectroscopy including IR, UV-VIS and NMR. *Prerequisites:* CH 3310 (4 Credits)

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration. Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1510 *Offered every year. (4 Credits)*

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

SO 1110 - Introduction to Sociology

This course introduces students to the dynamic and varied discipline of sociology. It provides an overview of major concepts, perspectives, and methods used in sociological inquiry. Students are encouraged to look at society and its institutions in new ways, and to identify and challenge social injustice. *(4 Credits)*

Recommended electives for pre DPT (doctorate in physical therapy)

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. *Offered every year. (4 Credits)*

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility

and endurance and learn how to most efficiently condition the human body for physical activity. The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites: BI 2030, Minimum of 60 credits earned. Offered every fall. (4 Credits)*

- KI 2180 - Applied Biomechanics

PH 2220 - General Physics II

A continuation of PH 2210. Topics include optics, thermal physics, electricity and magnetism, waves (especially sound, and light), and nuclear physics. Laboratory work emphasizes data collection, analysis, and interpretation. *Prerequisites: PH 2210. (4 Credits)*

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

Recommended Track for pre-Med, pre- Dental, or pre-Vet

CH 3310 - Organic Chemistry I

A study of carbon compounds by functional groups including the correlation of chemical and physical properties with structure, reaction mechanisms, and methods of synthesis. The laboratory portion emphasizes the microscale techniques. *Prerequisites: CH 2120. (4 Credits)*

CH 3320 - Organic Chemistry II

A continuation of CH 3310 - Organic Chemistry I. A study of additional functional groups and spectroscopy including IR, UV-VIS and NMR. *Prerequisites:* CH 3310 (4 Credits)

CH 3330 - Biochemistry

This course explores the roles of essential biological molecules focusing on proteins, lipids and carbohydrates. Students examine the structure of proteins, their function, and their association with other molecules. Protein purification and enzyme kinetics will be explored in the laboratory. *Prerequisites:* CH 3310. (4 Credits)

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration. Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1510 Offered every year. (4 Credits)

PH 2220 - General Physics II

A continuation of PH 2210. Topics include optics, thermal physics, electricity and magnetism, waves (especially sound, and light), and nuclear physics. Laboratory work emphasizes data collection, analysis, and interpretation. *Prerequisites:* PH 2210. (4 Credits)

Recommended Track for pre-nursing

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the

people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

Other Programs

Health Sciences Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for

academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant

anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). Offered every Fall. (2 Credits)

- Math as determined by MPA

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. Offered every spring (2 Credits)

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

BI 1020 - Foundations of Nutrition

An introduction to the basic concepts of nutrition, their application to the functions of carbohydrates, fats, proteins, minerals, and vitamins; the function and role of nutrients on health; and identification of substances in the diet which may adversely affect the body. *Offered every spring. (4 Credits)*

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites:* MT 1510. *Offered every Fall.* (4 Credits)

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall.* (4 Credits)

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester.* (4 Credits)

- General elective

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

BI 2040 - Human Anatomy & Physiology II

This is a continuation of BI 2030, Human Anatomy and Physiology I. This course concludes discussion of organ systems in humans, including the senses, hormonal control, and the integumentary, immune, digestive, urinary, and reproductive systems. *Prerequisites:* BI 1113-BI 1114. *Offered every spring. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

- A general elective

Third Year

Fall

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will

include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation.

Prerequisites: MT 1510. (4 Credits)

- Bio elective
- Bio or general elective

Spring

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- Bio elective
- Bio or chemistry elective
- LAS elective

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

History

The Study of History is the exploration of the thoughts, aspirations and achievements of every human life. As historians, our role is to sift the records of accumulated years through research. As the record of the past grows, we make sense of it, each of us in our own way, guided as we are by what Carl Becker referred to as our own unique "culture baggage." As the search progresses, we report our findings in a clear and useful way, sharing the experience of previous generations. We pursue this goal, not only in the realm of academia, but in the wider world as well. The skills to find and make sense of information, and then to communicate the results efficiently and to effect, are valuable in any field of endeavor and critical to citizens of the new global century.

At New England College, students of history apprentice as researchers, analysts, and communicators. They also have the opportunity to experience history as it is being made. After all, the quadrennial presidential campaign season begins in New Hampshire and reminds us that democracy in America was born in the towns and woods of New England. Internships in historical societies, living history sites and political campaigns are just a few of the ways in which our students gain experience and confidence.

Historical inquiry begins by prescribing parameters. Once a time period is identified, the apprentice historian establishes a sense of place within those temporal bounds. Intrinsic to the events that result from human action is the relationship such activity has with the landscape. From the daily activity of every community to the extraordinary impact of war, our history is influenced by the natural environment to the same degree that our actions have the capacity to alter the course of nature. The study of human history is one thread in the great tapestry of natural history.

Each course in the history curriculum embraces this awareness of time and place. The student of history has the added joy of exploring the cumulative thoughts and actions of the millions of men and women of all races, creeds and nationalities which, taken together, constitute the story of human interaction through the centuries. A major in history connects a student's life today directly and intimately with those who have lived before.

Learning Outcomes

Students majoring in History at New England College will:

- acquire a cultural vocabulary and become familiar with terminology peculiar to the historical profession;
- identify and locate sources of data pertaining to a particular inquiry;
- gain competence in the critical analysis of source materials;
- develop competence in writing for the profession;
- construct and defend a substantive argument;
- accumulate breadth and depth of content knowledge in the area of concentration;
- become aware of the ongoing controversies in the profession.
- experience the historian's art through multiple types of civic engagement and/or internships;

Experiential Learning in History

Students in History embark on their experiential journey early on, finding the content classes embedded with field trips, hands-on projects (siege weaponry to colonial agriculture) and the required internship at historic sites, museums archives and other locations. The culmination of the apprentice historian's career at New England College is the Senior Thesis. The thesis project is an independent, mentored research project drawing from primary and secondary sources and producing a piece of original scholarship carefully crafted and situated within the public discourse relevant to the thesis. In some cases, the thesis may be a significant project developed in the sphere of public history - a curated exhibit for instance or a project produced in another medium than writing. Regardless of the medium, completion sets the student apart, and demonstrates an achievement as a practitioner of the scholarly art, a contributor to our knowledge of the past.

Major

History, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(40 Credits)

Core Courses

(20 Credits)

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

or

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

HS 1110 - Western Civilization to 1500

An introductory survey of European history from ancient time to the recent past, the themes of this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1120.*

or

HS 1120 - Western Civilization Since 1500

An introductory survey of European history from ancient time to the recent past, the themes of this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1110.*

or

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

HS 2040 (PO 2040) - Research Methods

This course awakens the apprentice historian to the various methodologies of the historical profession. We will explore the elements of research: sources, analysis and argument, and practice the historian's craft: research, professional writing and oral (conference style) presentation. *(2 Credits)*

HS 2990 - From Acorn to Oak

Exploring the study of intimate history: family, community, neighborhood, town or institution, we will then urge the student to make connections from the local to the global. *(2 Credits)*

HS 4910 - Internship in History

An internship is required of history majors who exhibit strong emotional maturity, a strong sense of responsibility and are approved by the history faculty. The student is expected to work on-site for a term and to fulfill academic requirements of the internship (research, written assignments, seminar attendance, etc.). Up to 4 internship credits may count toward the 24 credits of electives in the History major. *Contract required. Variable credits 2-16*

HS 4930 (PO 4930) - Senior Thesis I

The senior thesis is the summation of the history major's career at NEC. The thesis is a work of original scholarship which demonstrates clearly the student's grasp of a topic, mature

understanding of it, and the ability to clearly and emphatically express that understanding and grasp to others. The senior thesis will normally conclude in the senior spring. This seminar will begin the thesis project. Topic selection, research, bibliography and outline are intended results. This course is required of all history majors *Offered spring or summer. (2 Credits)*

HS 4940 (PO 4940) - Senior Thesis II

The process continues with another seminar. In this term apprentice historians will begin to write the thesis. A significant draft is expected. This course is required of all history majors and is offered every fall term. *Prerequisites:HS 4930 (PO 4930). (2 Credits)*

HS 4950 (PO 4950) - Senior Thesis III

The process culminates in the senior spring with a significant piece of original written work and a public defense. In extremely rare cases, another form of capstone project may be substituted with advisor's permission. *(2 Credits)*

Required Electives

Twenty-four (24) credits from among the following:

HS 2230 (AR 2230) - History of American Art and Architecture

What is "American" about American art? How do the political, social and cultural events and ideals of an era shape the art and artists that emerge from it? This course will examine the visual culture of the United States from the colonial period through the early twentieth century. We will study art and architecture made in America as a reflection of its social, political, economic and cultural values. *(2 Credits)*

HS 3010 - Conversations in Early America 1485-1783

From the Age of Discovery to the battlefields of the French & Indian War and the American

rebellion this seminar examines the tumultuous careers of explorers and promoters, scholars and pirates, witches and settlers, merchants and slaves. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Travel is involved. *(4 Credits)*

HS 3030 - Revolutionary Republic 1783- 1809

Framing the new constitution and implementing it dominated the end of the eighteenth century and the beginning of the nineteenth. This seminar explores the creation of the new republic from the beginning of American independence to the end of the Jefferson administration. Travel is involved. *(4 Credits)*

HS 3080 - Major Problems in Modern America

This seminar will examine the various themes and problems in American history and culture from the end of Reconstruction to the very near past. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Each student, in concert with the faculty mentor, will design and complete a problem-based individual learning plan. *(4 Credits)*

HS 3200 - America at War

Born in revolution, sustained despite internal conflict, expanded by conquest and raised to superpower status by cataclysmic world wars, America has been called a "country made by war." This seminar explores an American war, from the Revolution to Vietnam, one war explored per term. *(4 Credits) May be repeated for credit under different topics.*

HS 3410 - Seminar in European History

In this course, we will focus on particular aspects or events in European history. Possible topics include but are not limited to the Great War, World War II and the European Theater, the Holocaust, religious movements, nationalism and the "Other," and gender in European society. *(4 Credits) May be repeated for credit with different topics.*

HS 3420 - Seminar in Global History

As technology brings all corners of the world closer together, we increasingly realize the interconnectedness of historical developments and our own daily lives. In this course, we will examine a variety of global trends and movements from the twentieth and twenty-first centuries, and learn about how they inform our lives today. Possible topics include, but are not limited to, war, terrorism, environmental concerns, social justice, migration, and struggles for human rights. *(4 Credits) May be repeated for credit with different topics.*

HS 3510 - Hands-on History

In this course students will explore the past by actually attempting to replicate the tasks that our ancestors undertook. From constructing a working medieval trebuchet to learning colonial settlement skills, this course seeks to bring the words and images of history to life. *Variable Credits 2-4 May be repeated for credit under different topics.*

HS 3990 - Topics in History

From the immediacy of the headlines to the enduring problems of our age, this course provokes inquiry into special topics driven by student demand or the current research interest of the instructor. *Variable Credits 2-4 May be repeated for credit under different topics.*

HS 4810 - Directed Study in History

Guided by a faculty member, the student will explore in great depth a particular topic in history. *Contract required. Variable credit (1-4)*

HS 4830 - Independent Study in History

Advanced, independent study of a specific topic arranged with a faculty member. *Contract required. Variable credit (1-4)*

HS 4910 - Internship in History

An internship is required of history majors who exhibit strong emotional maturity, a strong sense of responsibility and are approved by the history faculty. The student is expected to work on-site for a term and to fulfill academic requirements of the internship (research, written assignments, seminar attendance, etc.). Up to 4 internship credits may count toward the 24 credits of electives in the History major. *Contract required. Variable credits 2-16*

Note:

* An internship of four to twelve credits is required for the History major. All of those credits will count toward the 120 required for the BA, however only 4 credits will apply toward the 24 elective credits in the major.

All elective courses in Political Science are applicable in the History major with the understanding that to proceed in the field, the preponderance of courses should be in the major field. So, a student wishing to enroll in a graduate program in History should show more History courses in the major.

practice the historian's craft: research, professional writing and oral (conference style) presentation. (2 Credits)

HS 2990 - From Acorn to Oak

Exploring the study of intimate history: family, community, neighborhood, town or institution, we will then urge the student to make connections from the local to the global. (2 Credits)

Plus:

12 credits from History Electives numbered 3000 and up, total 20 credits.

Other Programs

History Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. (4 Credits)

LAS 2 (LAS 1120) - The Civic Environment - Democratic Values

An introduction to understanding the values and ideals of democratic thought and the challenges of pluralism.

In this seminar students will begin the work of how to understand the differences in human culture, values, customs, in the context of a shared humanity. With a focus on the civic environment this seminar works toward an understanding of diversity that strengthens an appreciation for democratic values and institutions as understood and articulated in The Universal Declaration of Human Rights. LAS 2 is designated as a writing-intensive General Education course. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

Spring

HS 1150 - World Civilization

Despite the apparent success of the West in the last half millennium, much of the world's achievements began or were sustained in non-Western cultures. The pre-Columbian Maya and Inca, the succession of peoples along the banks of the Tigris, Euphrates and Nile and of course China have all made remarkable contributions to the modern world as we know it long before Europeans could read or write. *(4 Credits)*

HS 1110 - Western Civilization to 1500

An introductory survey of European history from ancient time to the recent past, the themes of this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1120.*

or

HS 1120 - Western Civilization Since 1500

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

MT 1100 - Quantitative Reasoning

The goal of this course is to develop students' ability to think critically about quantitative statements and information. In this course, students will have opportunities to evaluate the strengths and weaknesses of numerical evidence and logical arguments, to apply mathematical methods in the context of real-world problems, and to study and employ strategies and methods for how to manipulate, understand, analyze, and interpret quantitative information. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. *(4 Credits)*

Second Year

Fall

HS 2040 (PO 2040) - Research Methods

This course awakens the apprentice historian to the various methodologies of the historical profession. We will explore the elements of research: sources, analysis and argument, and practice the historian's craft: research, professional writing and oral (conference style) presentation. *(2 Credits)*

HS 2990 - From Acorn to Oak

Exploring the study of intimate history: family, community, neighborhood, town or institution, we will then urge the student to make connections from the local to the global. *(2 Credits)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

Spring

- HS Elective
- HS Elective

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. *(4 Credits)*

- General Elective

Third Year

Fall

- HS Elective
- HS Elective

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic

community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

- General Elective

Spring

HS 4930 (PO 4930) - Senior Thesis I

The senior thesis is the summation of the history major's career at NEC. The thesis is a work of original scholarship which demonstrates clearly the student's grasp of a topic, mature understanding of it, and the ability to clearly and emphatically express that understanding and grasp to others. The senior thesis will normally conclude in the senior spring. This seminar will begin the thesis project. Topic selection, research, bibliography and outline are intended results. This course is required of all history majors *Offered spring or summer. (2 Credits)*

Fourth Year

Fall

HS 4940 (PO 4940) - Senior Thesis II

The process continues with another seminar. In this term apprentice historians will begin to write the thesis. A significant draft is expected. This course is required of all history majors and is offered every fall term. *Prerequisites: HS 4930 (PO 4930). (2 Credits)*

HS 4910 - Internship in History

An internship is required of history majors who exhibit strong emotional maturity, a strong sense

of responsibility and are approved by the history faculty. The student is expected to work on-site for a term and to fulfill academic requirements of the internship (research, written assignments, seminar attendance, etc.). Up to 4 internship credits may count toward the 24 credits of electives in the History major. *Contract required. Variable credits 2-16*

Spring

HS 4950 (PO 4950) - Senior Thesis III

The process culminates in the senior spring with a significant piece of original written work and a public defense. In extremely rare cases, another form of capstone project may be substituted with advisor's permission. *(2 Credits)*

- HS Elective
- General Elective
- General Elective

Note:

** Term placement is for illustrative purposes. The internship can be completed in any term during the student's career that complies with College policies. Up to 4 internship credits may count toward the 24 credits of electives in the major.

Humanities

The humanities are focused on the human experience exploring the record of our lives through the traces we leave: literature, art, theater, communications, philosophy, and history. Combined, the record of human experience enriches our relationships with every other person, living or dead. Regardless of your life path, an Associate Degree in Humanities provides you with the basis for a life well lived.

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule to meet individual interests and goals.

Requirements

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Twelve Credits

Twelve Credits, provided that these twelve credits do not also count for discipline specific requirements associated with this associate degree, to taken from the following list:

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes

community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

- LAS 2130

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

- LAS 215

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (*4 Credits*)

MT 1020 - College Algebra

This course is designed for students who need additional preparation for MT 1510 (Pre-calculus). The course will focus on the application of algebra to real world problems including introductory algebra topics such as: factoring polynomials, solving quadratic equations, graphing linear, quadratic, and other polynomial functions, rational functions, and solving systems of equations. Emphasis will be on conceptual understanding, learning in context, and solving real world problems using graphical, symbolic, and numeric representations. This course satisfies the Quantitative Literacy requirement *Offered every semester (4 Credits)*

24 additional credits

24 additional credits selected from the following disciplines:

- Art
- Communication Studies
- Creative Writing/English
- History
- Humanities
- Modern Languages (e.g. French, Italian, Spanish)
- Philosophy
- Theatre

General electives

General electives to complete 60-credit requirement.

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

Integrated Studies in Philosophy and Literature

The timelessness of works in the humanities reflects one of the most central and enduring aspects of human nature: the ever present desire to find meaning and purpose in the midst of a changing and turbulent world. The expression of this desire to question who we are, and to reflect on what we do, can be found in those defining works of a culture - its literature, art, music, philosophies, history, religions-that serve as touchstones to our past and guides to both our present and our future.

Within the Humanities the work of becoming human is of central concern to the disciplines of philosophy and literature. Both represent core expressions of a culture's self-understanding. Through the interplay of logic and metaphor, reason and imagination, philosophical argument and literary narrative, studies in philosophy and literature provide us with comprehensive and enriching views of ourselves by raising critical questions, challenging key assumptions, and demonstrating how story/imagination can contribute to the illumination of truth.

Studies in Philosophy & Literature will provide a solid foundation in all aspects of a student's professional and personal life. Here, at the intersection of these disciplines, students will become practitioners of Engaged Reading,* learning how to move into a text to uncover layers of

meaning, heightening attentiveness to the world, and developing confidence in their own abilities to think creatively and critically about who we are and the choices we make.

Learning Outcomes

Outcomes for students who successfully complete a course of study in Integrated Studies in Philosophy & literature include,

- A demonstrated ability to articulate the importance of the imagination in a culture's self-understanding;
- Demonstrate proficiency in Engaged Reading* of texts;
- Ability to Identify the differences and similarities between logical and metaphorical approaches to knowledge;
- Articulate the process whereby language functions as the medium through which experience is structured;
- Demonstrate an understanding of the historical and cultural role of philosophy and literature in shaping and challenging a culture's worldview.

* The discussion and practice of Engaged Reading is intended to introduce students to the aliveness of text in order to shift their experience from reading solely for the purpose of taking in (receiving?) information to reading as an interplay between reader and author. Through this process students will develop a method, suited to their individual learning style that will allow them to read with an attentiveness to what presents itself in language in both analytical and imaginative ways.

- Suggested Course Sequence

Requirements

Required Courses in Philosophy and Literature

(8 credits)

PL 1100 - Making Sense of the World: An Introduction to Great Works in Philosophy and Literature

The stories we tell are a reflection of our self-understanding. They present us with who we believe ourselves to be and create a context for interpreting the experiences that are definitive of the human condition. All knowledge begins with this process, as does our search for meaning and our need for purpose. Bringing together the great philosophic and literary narratives of cultures, this course will demonstrate how the literary imagination, in concert with philosophical reasoning, serves as a compass for navigating the landscape of experience as we continue to explore the boundaries of morality and the contours of our own humanity. Is there a place for story telling in philosophical exploration? Can literature offer us philosophical insight? What is the role of metaphor in human expression? What is the difference between myth and truth? Through a selection of texts central to a given theme, students will gain a deeper understanding of the nature of truth as it appears in its many rich and varied forms. *(4 Credits)*

PL 4300 - Imagining the World: The Poetic Mind in the Digital Age

One of the most significant and powerful shifts in human thought began in Europe around the 15th century. With the rise of modern sciences, a reimagining of the world took hold, one that, in a relatively short time, has shifted our way of thinking about ourselves in radical and significant ways. Today we refer to ourselves as hard-wired and study brain function to explain what, not so long ago, was considered the unique and mysterious phenomenon of mind or soul. As our understanding of the world becomes more and more available to us through the objective language of the sciences it becomes increasingly important to ask what is the place of the poetic in an age defined by scientific rationalism? Are there some truths that might simply not be amenable to the methodology of science? What is the relationship between the rational and the poetic? This course will examine the ways in which the poetic mind remains an essential requirement for any genuine understanding of ourselves and our experience. *(4 Credits)*

Cultural History

Three courses required in the Literature and/or Philosophy of a specific historical period, marking a foundation for or significant shift in a culture's thought for a total of 12 credits

Ancient Philosophy/Literature

(4 credits)

One course from the following:

PL 2991 - Topics in Ancient Philosophy and Literature

This course is an intensive examination of one specific area of ancient philosophy and literature. particular focus is dependent upon the needs and interests of students and faculty. *Since topics change, it may be repeated for credit.*

PL 3050 - Ancient Philosophy & Literature

A survey of the origins of Western Philosophy and Literature in Ancient Greece, beginning with Homer and the Greek tragedians. Tracing the shift from the mytho-poetic to the philosophical works of the Pre-Socratics, Socrates, Plato, and Aristotle, topics to be discussed will include the origin and composition of the cosmos, the nature of divinity, the possibility and extent of human knowledge, the basis for morality, the nature of the soul and its relation to the body, the development of political theory, and the meaning of life and human excellence (*4 Credits*) *Not available for students who have taken PA 3050*

EN 4010 - The Epic

This course is an in-depth study of the traditional epic both in the oral tradition and in writing, its development and impact on other genres such as the novel and more recently film, as well as on the history of literature. The epics will be read, analyzed, and discussed comparatively in their historical and cultural contexts. Works include, but may not be limited to, *The Epic of Gilgamesh, The Odyssey, Beowulf, The Song of Roland, The Inferno, and Paradise Lost.* *Prerequisites: A lower-level literature course or permission of instructor. Offered every other spring. (4 Credits)*

One course from

Renaissance Philosophy/Literature

Or

Modern Philosophy/Literature-(4 credits)

Courses fulfilling this requirement are:

Renaissance Philosophy/Literature

(4 credits)

One course from the following:

- PL 3992 - Topics in Renaissance Philosophy and Literature

PA 3150 (WS 3150) - Medieval/Renaissance Philosophy

A survey of philosophical and theological writings by men and women that traces the shift from the medieval to renaissance thought. Questions around the significance of the body, the role of gender, the meaning of creation and our place within it, will be explored by engaging with the extraordinarily rich literature of the medieval period. *(4 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

Or

Modern Philosophy/Literature

(4 credits)

One course from the following:

PL 2993 - Topics in Modern Philosophy and Literature

This course is an intensive examination of one specific area of Modern philosophy and literature. Its particular focus is dependent upon the needs and interests of students and faculty. *Since topics change, it may be repeated for credit.*

PA 3250 - Modern Philosophy

A close, critical study of the thought of major philosophers during the 17th through 19th centuries, in the areas of epistemology, metaphysics, and philosophy of mind. *(4 Credits)*

EN 2001 - Topics in Modern Literary Movements

This course will examine the writers and criticism associated with that particular modern literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 3020 - The Romantic Movement

This course will introduce the students to the movement called Romanticism as it will examine the major works of British literature of the period. It will branch out to include works by European writers of the same period, such as Goethe, Baudelaire, Rimbaud, and Lermontov. *Prerequisites: a lower level literature course, or permission of instructor. Offered every other year. (4 Credits)*

Contemporary Philosophy/Literature

(4 credits)

One course from the following:

PL 3994 - Topics in Contemporary Philosophy and Literature

This course is an intensive examination of one specific area of Contemporary philosophy and literature. Particular focus is dependent upon the needs and interests of students and faculty. *(4 Credits) Since topics change, it may be repeated for credit.*

PA 3350 - Contemporary Philosophy

A critical study of the major trends in 20th and 21st century philosophy, which may include

analytic philosophy, process philosophy, existentialism, hermeneutics, and deconstruction. (4 Credits)

PA 3510 - Existential Philosophy

An introduction to the themes and methods of existential philosophy. Topics to be discussed will include individuality, freedom and choice, bad faith and authentic experience, anxiety, and the meaning of death. (4 Credits)

EN 1950 - International Literature

This course is an in depth study of primarily short stories, essays, and poems in translation, belonging to the 20th century. The students will examine through carefully selected texts the different ways each culture expresses parallel human concerns such as identity, loss, coming of age, death, exile, marriage etc. that unite us all. The approach is comparative and analytical, with each text, including works from Africa, Asia, Latin America, the Middle East, and Europe, placed in its geographic, historic, and cultural context. *Offered every other year, usually in the fall.* (4 Credits)

EN 2002 - Topics in Contemporary Literary Movements

This course will examine the writers and criticism associated with that particular contemporary literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. (4 Credits) *(May be repeated with permission)*

EN 2850 (EN 3850) - Modernism: Revolt and Discovery

Modernism is an elusive term difficult to define, and even more difficult to confine to a specific time in history. Yet it is universally accepted that some profound changes were already afoot around the turn of the 20th century in the related fields of art and literature, not to mention technology. We will examine what factors contributed to this upheaval of society and the arts. We will discuss what impact these changes have had on our world today. We will do this through

carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. (4 Credits)

EN 3860 - Post-Modernism: Irony Takes Center Stage

Postmodernism seems to be a self-consciously contradictory phenomenon. It is as much about attitude as it is about negation of attitude. It is about trying to find meaning in a world where none may exist. Postmodernism seems to dominate the period after WWII, and irony dominates most of the works of art and literature of that period. The students will try to find the reasons as to why this may be so, as well as examine what Postmodernism may be heralding for the future by reading and analyzing carefully selected works of art, criticism, literature, and music.

Prerequisites: one 2000 level Literary Movements course. (4 Credits) Not open to students who have taken EN 4860

Interpreting Experience

4 courses for a total of 16 credits, with at least 12 credits at or above the 3000 level. These requirements will be fulfilled through careful course selection in conversation with student advisors in order to best support the interests and direction of the individual student's course of study.

Appropriate courses will explore our understanding of self in relation to the arts, morality, nature, culture, society, reason or science, and may be drawn from either philosophy or literature or a course that integrates both. Courses used to satisfy credit in Cultural History and Interpretive Experience may **not** count for credit in **both** areas.

Courses fulfilling this requirement are:

- PL 2990 - Topics in Philosophy and Literature

PL 2991 - Topics in Ancient Philosophy and Literature

This course is an intensive examination of one specific area of ancient philosophy and literature. particular focus is dependent upon the needs and interests of students and faculty. *Since topics change, it may be repeated for credit.*

- PL 3992 - Topics in Renaissance Philosophy and Literature

PL 2993 - Topics in Modern Philosophy and Literature

This course is an intensive examination of one specific area of Modern philosophy and literature. Its particular focus is dependent upon the needs and interests of students and faculty. *Since topics change, it may be repeated for credit.*

PL 3994 - Topics in Contemporary Philosophy and Literature

This course is an intensive examination of one specific area of Contemporary philosophy and literature. Particular focus is dependent upon the needs and interests of students and faculty. (4 Credits) *Since topics change, it may be repeated for credit.*

PL 3050 - Ancient Philosophy & Literature

A survey of the origins of Western Philosophy and Literature in Ancient Greece, beginning with Homer and the Greek tragedians. Tracing the shift from the mytho-poetic to the philosophical works of the Pre-Socratics, Socrates, Plato, and Aristotle, topics to be discussed will include the origin and composition of the cosmos, the nature of divinity, the possibility and extent of human knowledge, the basis for morality, the nature of the soul and its relation to the body, the development of political theory, and the meaning of life and human excellence (4 Credits) *Not available for students who have taken PA 3050*

- PL 3990 - Topics in Philosophy and Literature

PA 2710 (WS 2710) - Philosophy of the Irrational

In antiquity, Socrates tells us, "Some of our greatest blessings come to us by way of madness." What is the relationship between the irrational and the madness of love, of creativity, or of religious ecstasy? Has madness/irrationality been associated with one sex more than the other? This course will explore the meaning of madness in the context of the development of reason in the western philosophical tradition. In addition to philosophy and women's studies, this course will be of benefit to students of psychology, education and the arts. (4 Credits)

PA 2810 - Philosophy of Science

An examination of the methods and historical development of the sciences generally, as well as a treatment of philosophical issues that arise in particular sciences. What justifies the view that science is the most objective source of human knowledge? What makes a scientific theory true? To what extent does scientific knowledge depend on history, political perspective, or gender, and what influence do values have on science? Especially pertinent to science majors, but designed for all interested students. Extensive scientific background not required. *Offered as needed. (4 Credits)*

PA 4010 (WS 4010) - Moral Philosophy

Advanced study of the concepts and judgments of value, including treatment of the notions of good and bad, right and wrong, and theories of moral obligation. Classic and contemporary readings will be engaged to explore contrasting views on the proper role of rules and virtues in morality, the relation of rules to the exercise of morality, moral psychology, an PA 4110 (WS 4110) Feminist Philosophies and the connection of morality to reason. *Offered as needed. (4 Credits)*

PA 4110 (WS 4110) - Feminist Philosophies

This course seeks to pull together the myriad of course experiences a student will have had in women's studies. Focusing on major trends in feminist theory and incorporating global perspectives, students will engage in an intensive reading of feminist philosophers, and authors exploring both traditional and cross-cultural ideas on the nature and/or construction of sexual difference and its relationship to morality, rationality, knowledge, science, politics, etc. *(4 Credits)*

EN 2000 - Topics in Literary Movements

This course will examine the writers and criticism associated with that particular literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 2001 - Topics in Modern Literary Movements

This course will examine the writers and criticism associated with that particular modern literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 2002 - Topics in Contemporary Literary Movements

This course will examine the writers and criticism associated with that particular contemporary literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 2140 - Existential Literature: The Individual Against the System

Existential literature dramatically illustrates the human being's confrontation with his/her existence with all its complexities. The emphasis in this course is on well-known existential writers, such as Kierkegaard, Dostoevsky, Kafka, Nietzsche, Ortega, Sartre, Simone de Beauvoir, Neruda, and Camus, but not limited to them. The students will examine how this philosophy has become so closely linked to the almost all artistic works of the 20th Century. *Offered every spring. (4 Credits)*

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

EN 2850 (EN 3850) - Modernism: Revolt and Discovery

Modernism is an elusive term difficult to define, and even more difficult to confine to a specific time in history. Yet it is universally accepted that some profound changes were already afoot around the turn of the 20th century in the related fields of art and literature, not to mention technology. We will examine what factors contributed to this upheaval of society and the arts. We will discuss what impact these changes have had on our world today. We will do this through carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. (4 Credits)

EN 3000 - Advanced Topics Literary Movements

These courses will offer in-depth studies of specific Literary Movements and will examine the writers and criticism associated with that particular movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. (4 Credits)

EN 3020 - The Romantic Movement

This course will introduce the students to the movement called Romanticism as it will examine the major works of British literature of the period. It will branch out to include works by European writers of the same period, such as Goethe, Baudelaire, Rimbaud, and Lermontov. *Prerequisites: a lower level literature course, or permission of instructor. Offered every other year. (4 Credits)*

EN 3860 - Post-Modernism: Irony Takes Center Stage

Postmodernism seems to be a self-consciously contradictory phenomenon. It is as much about attitude as it is about negation of attitude. It is about trying to find meaning in a world where none may exist. Postmodernism seems to dominate the period after WWII, and irony dominates most of the works of art and literature of that period. The students will try to find the reasons as to why this may be so, as well as examine what Postmodernism may be heralding for the future by reading and analyzing carefully selected works of art, criticism, literature, and music. *Prerequisites: one 2000 level Literary Movements course. (4 Credits) Not open to students who have taken EN 4860*

EN 3950 (TH 3950) - Shakespeare

This course studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. This course is team-taught. *Prerequisites: at least a lower level literature course. Offered every other year. (4 Credits)*

- CO 1000 - Learning to Look: Contemporary Art and Media *or*
- AR 1000 - Learning to Look: Contemporary Art and Media

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop

strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (*4 Credits*)

- LAS Elective
- Elective

Spring

- 3000 level and above designated Interpreting Experience courses in Philosophy, (PA), Literature (EN), or Integrated Studies (PL)

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. PL 4300 - Imagining the World: The Poetic Mind in the Digital Age

One of the most significant and powerful shifts in human thought began in Europe around the 15th century. With the rise of modern sciences, a reimagining of the world took hold, one that, in a relatively short time, has shifted our way of thinking about ourselves in radical and significant ways. Today we refer to ourselves as hard-wired and study brain function to explain what, not so long ago, was considered the unique and mysterious phenomenon of mind or soul. As our understanding of the world becomes more and more available to us through the objective language of the sciences it becomes increasingly important to ask what is the place of the poetic in an age defined by scientific rationalism? Are there some truths that might simply not be amenable to the methodology of science? What is the relationship between the rational and the poetic? This course will examine the ways in which the poetic mind remains an essential requirement for any genuine understanding of ourselves and our experience. (4 Credits)

Kinesiology

Kinesiology is a human service major that trains individuals to help others enhance the quality of their lives through a balance of physical activity and other areas of wellness. Professionals in the field are able to design and implement physical activity programs that are safe, effective, developmentally appropriate, enjoyable, and inclusive of people of varied interests and physical characteristics. The curriculum in kinesiology can be tailored to individual student interests, although in general, it prepares students for careers related to physical activity, fitness, and sport, and provides a broad exposure to the liberal arts. Graduates pursue careers as physical education teachers, health-fitness instructors, personal trainers and exercise leaders, recreation directors, athletic coaches, and athletic administrators or cross over into areas related to sport and recreation management. Kinesiology also is excellent preparation for professional certification programs in fields such as athletic training, massage therapy, personal training, and strength and conditioning.

Learning Outcomes

With regard to physical activity, fitness and healthy living, graduates of the Kinesiology Program will:

- Understand the fundamental concepts and theories of human movement from a variety of scientific, social, and cultural perspectives.
- Demonstrate practical skills related to the fundamental concepts of human movement.
- Demonstrate the capacity to identify, access, analyze, synthesize and integrate information and concepts related to human movement.
- Apply critical thinking to solve problems from personal, scholarly, and professional perspectives.
- Demonstrate the ability to communicate clearly and effectively in a variety of settings, using a variety of formats and for a variety of purposes.
- Accept an ethical responsibility to improve quality of life for others and ensure equitable access to opportunities to participate in physical activity for diverse groups.

Experiential Learning Component

The Kinesiology major includes numerous experiential components, which are purposely and developmentally built across the curriculum. These components begin in the first year introductory courses and continue through the hierarchy of courses culminating with the Senior Seminar course. After the first year, each student will experience a field placement in a kinesiology related setting. Ideally, each major would enroll in the Field Experience in the sophomore year. During the junior or senior years, a student who meets the designated criteria could opt to apply to complete an Internship in Kinesiology.

KI 3850 - Field Experience in Kinesiology will serve as a foundational experience in which the student begins to contextualize those fundamental concepts of the discipline. The experiences in this course will provide for more knowledgeable consideration of future professional aspirations.

Typical Field Experience and/or Internship placement sites/organizations would include privately owned fitness centers, YMCA, Boys and Girls Club, Special Olympics, youth sports leagues, city/town recreation centers, local and regional ski areas, public school physical education and after school programs, and the recreation and tourism components operated by NH State government agencies.

Major

Kinesiology, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(48 Credits)

- Students majoring in kinesiology must earn a C- or better in all courses in the major.
- Kinesiology majors must minimally complete all of the kinesiology core courses.
- Field Experience in Kinesiology is required, and each student is strongly encouraged to select a Field Experience in an area of interest toward a potential future career goal in consultation with a faculty advisor. [It is strongly recommended that kinesiology majors choose an advisor in the kinesiology department by the end of their first year.]

Kinesiology Core Courses

(48 Credits)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. Offered every fall. (4 Credits)

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. Offered every year. (4 Credits)

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency

Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 2140 - Motor Behavior

This course provides an overview of motor development, motor learning, and motor control. Specific focus is placed on how the brain and nervous system control movement and how new movements are learned and improved. Development of fundamental movement skills as well as applications of motor control and development to teaching and coaching of movement activities will be explored. This course includes practical components to apply key concepts introduced to the learning, evaluation, and assessment of sport and movement skills. *Offered every year. (2 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness.

Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with

opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 3120 (SM 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence, politics, economics, gender, race and ethnicity, deviance, and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper level and writing intensive course also serves as a LAS 7 in the Liberal Arts and Sciences curriculum, meeting both the outcomes of the departments of Kinesiology and Sport and Recreation Management, as well as those of the LAS curriculum. *Prerequisites: Minimum of 60 credits earned. Offered every fall. (4 Credits)*

KI 3180 - Biomechanics

This course provides a combined theoretical and practical experience in the application of the mechanical principles of movement. Students explore and apply the mechanical principles of physics to human movement. Particular attention is given to how one develops efficiency in various movements and to the mechanical principles for instruction of physical motor skills. The focus is on the applied science as it relates to the teaching, coaching, and training of various physical skills and activities. Students will participate in the scientific analysis of movement. The course integrates athletic and health-fitness perspectives on movement training and enables students to critique and design appropriate movement skill progressions for sport or exercise. A thorough understanding and background in anatomy is essential for successful integration into this course content. *Prerequisites: BI 2030. Offered every spring. (4 Credits)*

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites:* KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include coaching, recreation and intramural programs, fitness center instruction or management, event management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites:* KI 1110, *Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

KI 4000 - Senior Seminar in Kinesiology

This capstone course focuses the kinesiology student on the challenges and responsibilities of professional practice in the fields within Kinesiology. Interdisciplinary research, ethics, leadership, current issues and controversies, market trends, and in depth exploration of career planning and skill development and implementation for transitioning from the student to the professional are major components. An extensive research project (including a paper, oral

presentation, and poster presentation) is the culminating outcome of this course. Open to kinesiology majors only. *Prerequisites: Minimum of 90 credits earned. Offered every spring. (4 Credits)*

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility and endurance and learn how to most efficiently condition the human body for physical activity. The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites: BI 2030, Minimum of 60 credits earned. Offered every fall. (4 Credits)*

Complete a minimum of two (2) from the following:

KI 2112 - Movement Instruction: Creative Movement

This skills-based course provides instruction and application of key principles and fundamentals of physical movements in rhythms and basic gymnastics. Particular focus is placed on the skill progressions appropriate in school physical education programs, after school programs, and recreation programs. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess a variety of rhythmic movements, and fundamental gymnastics skills such as tumbling. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after

school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

Experiential Learning Component

The Kinesiology major includes numerous experiential components, which are purposely and developmentally built across the curriculum. These components begin in the first year introductory courses and continue through the hierarchy of courses culminating with the Senior Seminar course. After the first year, each student will experience a field placement in a kinesiology related setting. Ideally, each major would enroll in the Field Experience in the

sophomore year. During the junior or senior years, a student who meets the designated criteria could opt to apply to complete an Internship in Kinesiology.

KI 3850 Field Experience in Kinesiology will serve as a foundational experience in which the student begins to contextualize those fundamental concepts of the discipline. The experiences in this course will provide for more knowledgeable consideration of future professional aspirations.

Typical Field Experience and/or Internship placement sites/organizations would include privately owned fitness centers, YMCA, Boys and Girls Club, Special Olympics, youth sports leagues, city/town recreation centers, local and regional ski areas, public school physical education and after school programs, and the recreation and tourism components operated by NH State government agencies.

Minor in Coaching

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2020 - Cardiopulmonary Resuscitation (CPR) for the Professional Rescuer

This required core course for kinesiology majors provides instruction and practice in the American Red Cross procedures for cardiopulmonary resuscitation. Topics include prevention, treatment, and recognition of injuries, as well as dealing with cardiovascular and respiratory emergencies and notifying EMT. Instruction and practical training in the use of the AED will be included. Practical hands-on work is required in the course, as well as both a written and practical exam to earn Red Cross Certification. *Offered every year. (1 Credit)*

KI 2110 - Care and Prevention of Injuries

An introductory course for the prospective physical educator, coach, personal trainer, physical therapist or athletic trainer designed to focus on the prevention, care, and management of sport and physical activity related injuries. Because initial decisions and subsequent actions are critical in determining the outcome of sports injury, this course will present key concepts in a comprehensive, logically sequential manner that will assist future professionals in making the correct decisions when confronted with an activity-related injury in their scope of practice. Specific domains of athletic training are introduced, predominantly those of prevention, recognition and treatment of athletic injuries. Essential anatomy is reviewed as it applies to injury mechanisms. Basic evaluation and rehabilitation skills are illustrated and practiced in the required lab section, as well as basic bandaging, taping and emergency care procedures. *Offered every year. (4 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is

placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

KI 3720 - Coaching Education Seminar

Coaching certification is a crucial issue in today's sport education arena. This course will provide a comprehensive training for students interested in coaching from the youth to college levels. The content will focus on multiple aspects of coaching including physical training, sport psychology, risk management and legal liabilities, administrative roles within coaching, teaching technical and tactical skills, and ethics related to coaching. The required materials cover coaching competencies included in national certification coaching programs, such as the "American Sport Education Program" (ASEP). *Prerequisites: Minimum of 30 credits earned. Offered every other fall. (4 Credits)*

KI 4710 (SM 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally,

diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: Minimum of 60 credits earned. (4 Credits)*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 3120 (SM 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence, politics, economics, gender, race and ethnicity, deviance, and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper level and writing intensive course also serves as a LAS 7 in the Liberal Arts and Sciences curriculum, meeting both the outcomes of the departments of Kinesiology and Sport and Recreation Management, as well as those of the LAS curriculum. *Prerequisites: Minimum of 60 credits earned. Offered every fall. (4 Credits)*

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include

coaching, recreation and intramural programs, fitness center instruction or management, event management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites: KI 1110, Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

Electives in Kinesiology

KI 1170 - Positive Coaching of Youth Sports

This introductory level course presents aspects of coaching pertinent to today's youth coach and the youth coaches of the future. Emphasis is placed on positive leadership in three critical areas; 1) character building and sportsmanship, 2) the physical, social, and emotional capacities and limitations of the specific age group, and 3) coaching principles and philosophies as well as the rules and strategies of the sport. Positive Coaching promotes the value and importance of sports and physical activities in the emotional, physical, social, and mental development of youth through participation, which is meant to develop important character traits and social skills for every child involved. This can be done only if the adults involved have proper training and information. Throughout the course, students will examine the ideas behind positive coaching, introduce coaching ideas into real-life situations, and reflect on personal sport and coach experiences. *Offered every other year. (2 Credits)*

KI 1510 (SM 1510) - Introduction to Sport and Recreation Management

This introductory-level course is an overview of the theoretical disciplines and professions in sport and recreation management. Using lecture and discussion following a course text, students also will engage in in-class and out-of-class projects covering the diverse areas of the non-profit and for-profit sport industries. The course will survey: the history of modern U.S. sport; introduction to management, supervision, and leadership theories; legal aspects of sport and

recreation including negligence, contracts, and risk management; sport in society; recreation facilities management; the NCAA and collegiate administration; marketing and services; accounting and budgeting; sport psychology; and more. (Students majoring in Sport & Recreation Management should take this course during the first year.) *Offered every semester (4 Credits)*

KI 2020 - Cardiopulmonary Resuscitation (CPR) for the Professional Rescuer

This required core course for kinesiology majors provides instruction and practice in the American Red Cross procedures for cardiopulmonary resuscitation. Topics include prevention, treatment, and recognition of injuries, as well as dealing with cardiovascular and respiratory emergencies and notifying EMT. Instruction and practical training in the use of the AED will be included. Practical hands-on work is required in the course, as well as both a written and practical exam to earn Red Cross Certification. *Offered every year. (1 Credit)*

KI 2110 - Care and Prevention of Injuries

An introductory course for the prospective physical educator, coach, personal trainer, physical therapist or athletic trainer designed to focus on the prevention, care, and management of sport and physical activity related injuries. Because initial decisions and subsequent actions are critical in determining the outcome of sports injury, this course will present key concepts in a comprehensive, logically sequential manner that will assist future professionals in making the correct decisions when confronted with an activity-related injury in their scope of practice. Specific domains of athletic training are introduced, predominantly those of prevention, recognition and treatment of athletic injuries. Essential anatomy is reviewed as it applies to injury mechanisms. Basic evaluation and rehabilitation skills are illustrated and practiced in the required lab section, as well as basic bandaging, taping and emergency care procedures. *Offered every year. (4 Credits)*

KI 2420 - Women in Sport: Historical and Contemporary Issues

The course introduces students to the history of women in sport and explores the timeline of key events in this history as well as contemporary issues and events influencing the role of girls and women in sport. It will provide students with the opportunity to gain understanding and knowledge of the dramatic changes that have taken place in North America and around the world

with regard to women in the sporting arena. In addition, students will have the opportunity to recognize that this "sporting arena" not only affects women and men with regard to competitive sport, but also impacts social, economic, and psychological arenas as well. Perceptions, attitudes, and the roles of women have been in constant change throughout history and in this class students will learn how "sport" has had a dramatic impact on this constant change. *Prerequisites: Minimum of 30 credits earned. Offered every other year. (4 Credits)*

KI 2750 (SM 2750) - Organization and Administration of Sport and Recreation

This sophomore-level course is designed to provide the student with an overview of theoretical and practical components of administration in various sport and recreation venues. Utilizing a course text, current research, class discussion, guest speakers, and numerous hands-on projects, the students will analyze organizations (including interscholastic and intercollegiate programs, conferences, and other sport groups) and methods and theories of administration and budgeting. Student projects include: budget development & presentations, games management for a New England College athletic contest, administration of an NEC Homecoming event, sponsoring an intramural event for Recreation Sports, planning and organizing a pep rally for NEC Athletics, and debates. *Prerequisites: SM 1510 or KI 1110. Offered every year. (4 Credits)*

KI 3150 - Fitness Programming and Assessment

This course addresses the interaction of basic foundation courses such as anatomy, physiology, biomechanics, wellness, and nutrition, in order to develop effective and developmentally appropriate exercise programs for various populations. The process of evaluating, creating, and implementing exercise programs will be the focus of this course, which will include both theoretical investigation, as well as experiential work in leading and assessing fitness activities and exercise programs. Students interested in personal training as a possible career path will benefit from this course. This course is particularly relevant for students in kinesiology, physical education, health science, and coaching *Prerequisites: BI 2030, KI 1110, Minimum of 60 credits earned. Offered every year. (2 Credits)*

KI 3610 (OE 3610/SM 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's

philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out.

Prerequisites: OE 1110 or KI 1110 or SM 1510, Minimum of 30 credits earned. (4 Credits)

KI 3720 - Coaching Education Seminar

Coaching certification is a crucial issue in today's sport education arena. This course will provide a comprehensive training for students interested in coaching from the youth to college levels. The content will focus on multiple aspects of coaching including physical training, sport psychology, risk management and legal liabilities, administrative roles within coaching, teaching technical and tactical skills, and ethics related to coaching. The required materials cover coaching competencies included in national certification coaching programs, such as the "American Sport Education Program" (ASEP). *Prerequisites: Minimum of 30 credits earned. Offered every other fall. (4 Credits)*

KI 3990 - Topics in Kinesiology

Examination of selected topics in kinesiology. *Offered upon sufficient demand. Variable Credit (2-4) May be repeated for credit with different topics.*

KI 4710 (SM 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: Minimum of 60 credits earned. (4 Credits)*

KI 4810 - Directed Study in Kinesiology

This is a course of study to be arranged between faculty and student in the field of Kinesiology. *Contract required. Variable Credits (1-4) May be repeated for credit with varied topics.*

KI 4830 - Independent Study in Kinesiology

This study course allows for advanced, independent study of a selected topic arranged in collaboration with a faculty member. *Contract required. Variable Credits (1-4)*

KI 4910 - Internship in Kinesiology

The internship is an opportunity for the kinesiology major to explore an in depth experience at a placement site on or off campus which is related to the discipline of kinesiology. An application is required and the student will present the internship proposal to kinesiology faculty prior to approval. *Prerequisites: KI 3850, Minimum of 60 credits earned. Contract required. Variable Credits (1-16)*

Physical Education Courses

Courses**Physical Education**

The following PE 1000-level activity courses consist of practical participation and theoretical learning in individual and team physical activities with emphasis on the enjoyment of leisure-time activities. One (1) credit is granted for each course and each of these courses meets for one-half of the semester (7 weeks). With the exception of Kinesiology majors, students may take a maximum of six (6) of these courses for credit toward graduation. Not repeatable for credit. No prerequisites required for these activity courses unless specifically noted in a course description.

PE 1530 - Hiking

This course will include instruction in the basics of hiking. Students will be instructed in hiking techniques and safety and will participate in hikes. This is a recreational class open to all students. *(1 Credit)*

PE 1550 - Ultimate Frisbee

This course will include instruction of the basic techniques, rules and skills needed to play ultimate frisbee. By the conclusion of the class students will be able to participate in ultimate frisbee as a lifetime activity. This is a recreational class open to all students. Equipment is provided. *(1 Credit)*

PE 1610 - Strength Training

This course introduces students to the development of muscular strength and endurance through a progressive resistance program. Students actively participate in designated exercises to increase their strength using weights and/or other resistance devices. *(1 Credit)*

PE 1630 - Fitness for Life

This course is a practical introduction to common fitness activities that can be performed by individuals with varying levels of fitness and physical characteristics throughout their lives. Students may be involved in walking, hiking, cycling, strength development, cooperative games and other low-to-moderate intensity fitness activities. *(1 Credit) Note: Fitness for Life is intended for the relatively sedentary person who wants to learn and become more motivated in physical activity.*

PE 1640 - Physical Conditioning

This is a conditioning course intended for students who are already moderately active and who want to increase their levels of cardio-respiratory and musculo-skeletal fitness. Moderate to high-intensity training methods such as walking/jogging, interval, circuit, fartlek training, plyometrics, Pilates, and resistance training are typically offered. *(1 Credit)*

PE 1650 - Aerobics

This is a conditioning course utilizing various levels (low to high impact) of cardiovascular exercises as a means toward developing an improved level of physical fitness. *(1 Credit)*

PE 1660 - Tae Kwon Do Level I

Tae kwon do (meaning the way of hand and foot) had its beginnings in Korea and now is practiced in 157 countries around the world. Students participating in this course will learn and practice basic blocks, punches, kicks, patterned forms, sparring techniques, self-control, Korean terminology, as well as the customs and courtesies. *(1 Credit)*

PE 1670 - Cardio-Kickboxing

One of the most popular group exercise workouts in the country. Training principles are derived from the Martial Arts, Aerobics and Boxing. These varied disciplines combine to form a comprehensive workout that is safe, effective and fun. Students will learn proper execution of the techniques. *Offered upon sufficient demand. (1 Credit)*

PE 1680 - Yoga

This course is designed to offer the student with the techniques and philosophies associated with yoga. Different types of yoga may be taught, based on the instructor training and certifications. The student will actively participate in the postures and positions of basic yoga, and will also gain knowledge in the theories and philosophies associated with the specific form of yoga performed. *(1 Credit)*

PE 1690 - Self-Defense

This course teaches physical skills as well as using critical thinking skills. The focus of this course is to identify threat recognition, threat analysis and threat management. The student will learn tactics to stay safe in various environments and tools that can be used effectively to

increase personal safety. Skills to be learned and practiced include: defenses, blocking and falling techniques, all specifically designed to recognize, avoid, or provide for safe removal from a threatening environment. No previous self-defense or martial art skills required. *(1 Credit)*

PE 1710 - Golf

This course will include instruction of the basic rules, techniques and skills needed to play golf at any level. Students will also be able to identify the mental, social, and physical benefits of participation in playing golf as a lifetime sport. No previous experience playing golf is required. *(1 Credit)*

PE 1720 - Racquet Sports

This course will include instruction of the basic rules, techniques and skills needed to play the various racquet sports (typically badminton or tennis) at any level. Students will also be able to identify the mental, social, and physical benefits of participation in the activity as a lifetime sport. No previous background in the sport is required. *(1 Credit)*

PE 1740 - Fundamentals of Rhythm

This is a participatory course. All students will learn various types of dance and rhythmical movement, how to incorporate manipulatives with music and movement, and different methods of teaching rhythmic expression. The course is designed to provide students with an understanding of how to teach a progressive unit in rhythms to students of any age. *(1 Credit)*

PE 1760 - Beginner Skating

This course is a practical introduction to the basic techniques involved in ice skating: balance, edging, turning, skating forward and backward, and developing a more powerful stroke. Basic techniques common to both figure and power (hockey) skating comprise the majority of the course. This course is intended for beginners. A pair of figure or hockey skates is required. *(1 Credit)*

PE 1790 - Movement for Relaxation and Revitalization

A course in gentle bodywork, breathing exercises and meditation practices intended to open the vital energy pathways, tone and balance the major organs and glands and the nervous system, improve spinal alignment and flexibility, and enhance mental, emotional and spiritual clarity and balance. Movement forms practiced in the course may include yoga, sotai, qigong, and tai chi. *(1 Credit) Course may be repeated for credit with a different instructor and/or topic.*

PE 1810 - Volleyball

This course will include instruction of the basic rules, techniques and skills needed to play volleyball at any level. Students will also be able to identify the mental, social, and physical benefits of participation in volleyball as a lifetime sport. No previous volleyball skills are necessary. *(1 Credit)*

PE 1820 - Softball

This course will include instruction of the basic rules, techniques and skills needed to play softball at any level. Students will also be able to identify the mental, social, and physical benefits of participation in softball as a lifetime sport. *(1 Credit)*

PE 1830 - Soccer

This course will include instruction of the basic rules, techniques and skills needed to play soccer at any level. Students will also be able to identify the mental, social, and physical benefits of participation in soccer as a lifetime sport. No previous soccer skills are necessary. *(1 Credit)*

PE 1840 - Basketball

This course will include instruction of the basic rules, techniques and skills needed to play basketball at any level. Students will also be able to identify the mental, social, and physical benefits of participation in basketball as a lifetime sport. No previous basketball skills are necessary. *(1 Credit)*

PE 1850 - Field Hockey

This course will include instruction of the basic rules, techniques and skills needed to play field hockey at any level. Students will also be able to identify the mental, social, and physical benefits of participation in field hockey as a lifetime sport. No previous field hockey skills are necessary. *(1 Credit)*

PE 1860 - Lacrosse

This course will include instruction of the basic rules, techniques and skills needed to play women's or men's lacrosse at any level. Students will also be able to identify the mental, social, and physical benefits of participation in lacrosse as a lifetime sport. No previous lacrosse skills are necessary. *(1 Credit)*

PE 1870 - Floor Hockey

This course will cover the basic fundamentals of floor hockey such as stick handling, passing, shooting, etc, as well as more advanced concepts such as face-offs, goal tending, offensive and defensive tactics. The rules of the game and team aspects associated with floor hockey will also be taught. The emphasis will be on learning how to play floor hockey, practicing the various skills, and having fun. *(1 Credit)*

PE 1880 - Flag Football

This one credit course is designed to teach the basics fundamentals, rules and skills of flag football. Students will receive instruction in the rules of play, skills and strategies required to experience team play in the sport of flag football. *(1 Credit)*

PE 1990 - Topics in Movement Skills

Varied topics in Movement Skills. *(1 Credit) May be repeated with different topics for credit.*

Minor

Coaching Minor

- Description and Learning Outcomes

Requirements

(20-23 Credits)

The Coaching Minor is open to all students. Minimum requirements to complete a minor in Coaching include:

Choose one of the following:

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2020 - Cardiopulmonary Resuscitation (CPR) for the Professional Rescuer

This required core course for kinesiology majors provides instruction and practice in the American Red Cross procedures for cardiopulmonary resuscitation. Topics include prevention, treatment, and recognition of injuries, as well as dealing with cardiovascular and respiratory emergencies and notifying EMT. Instruction and practical training in the use of the AED will be included. Practical hands-on work is required in the course, as well as both a written and practical exam to earn Red Cross Certification. *Offered every year. (1 Credit)*

KI 2110 - Care and Prevention of Injuries

An introductory course for the prospective physical educator, coach, personal trainer, physical therapist or athletic trainer designed to focus on the prevention, care, and management of sport and physical activity related injuries. Because initial decisions and subsequent actions are critical in determining the outcome of sports injury, this course will present key concepts in a comprehensive, logically sequential manner that will assist future professionals in making the correct decisions when confronted with an activity-related injury in their scope of practice. Specific domains of athletic training are introduced, predominantly those of prevention, recognition and treatment of athletic injuries. Essential anatomy is reviewed as it applies to injury mechanisms. Basic evaluation and rehabilitation skills are illustrated and practiced in the required lab section, as well as basic bandaging, taping and emergency care procedures. *Offered every year. (4 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to

students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

KI 3720 - Coaching Education Seminar

Coaching certification is a crucial issue in today's sport education arena. This course will provide a comprehensive training for students interested in coaching from the youth to college levels. The content will focus on multiple aspects of coaching including physical training, sport psychology, risk management and legal liabilities, administrative roles within coaching, teaching technical and tactical skills, and ethics related to coaching. The required materials cover coaching competencies included in national certification coaching programs, such as the "American Sport Education Program" (ASEP). *Prerequisites: Minimum of 30 credits earned. Offered every other fall. (4 Credits)*

KI 4710 (SM 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the

numerous legal issues involved at such an event. *Prerequisites: Minimum of 60 credits earned. (4 Credits)*

Choose one of the following:

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 3120 (SM 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence, politics, economics, gender, race and ethnicity, deviance, and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper level and writing intensive course also serves as a LAS 7 in the Liberal Arts and Sciences curriculum,, meeting both the outcomes of the departments of Kinesiology and Sport and Recreation Management, as well as those of the LAS curriculum. *Prerequisites: Minimum of 60 credits earned. Offered every fall. (4 Credits)*

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include coaching, recreation and intramural programs, fitness center instruction or management, event

management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites: KI 1110, Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

Other Programs

Kinesiology Suggested Sequence of Courses

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. *Offered every year. (4 Credits)*

Spring

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness.

Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. *(Meets the second seven weeks of every spring semester.) Offered every spring (2 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and

society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Elective (4 Credits)

Second Year

Fall

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall. (4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2140 - Motor Behavior

This course provides an overview of motor development, motor learning, and motor control. Specific focus is placed on how the brain and nervous system control movement and how new movements are learned and improved. Development of fundamental movement skills as well as applications of motor control and development to teaching and coaching of movement activities will be explored. This course includes practical components to apply key concepts introduced to the learning, evaluation, and assessment of sport and movement skills. *Offered every year. (2 Credits)*

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

- Elective *(4 Credits)*

Spring

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to

students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

OR

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

OR

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

- Elective (4 Credits)

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through

critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include coaching, recreation and intramural programs, fitness center instruction or management, event management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites:* KI 1110, *Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

Third Year

Fall

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to

accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites:* KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)

KI 3120 (SM 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence, politics, economics, gender, race and ethnicity, deviance, and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper level and writing intensive course also serves as a LAS 7 in the Liberal Arts and Sciences curriculum, meeting both the outcomes of the departments of Kinesiology and Sport and Recreation Management, as well as those of the LAS curriculum. *Prerequisites:* Minimum of 60 credits earned. Offered every fall. (4 Credits)

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. Offered every year. (2 Credits)

OR

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140. Offered every year. (2 Credits)*

OR

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movement s in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include coaching, recreation and intramural programs, fitness center instruction or management, event management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field

experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites:* KI 1110, *Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

- Elective (4 Credits)

Spring

KI 3180 - Biomechanics

This course provides a combined theoretical and practical experience in the application of the mechanical principles of movement. Students explore and apply the mechanical principles of physics to human movement. Particular attention is given to how one develops efficiency in various movements and to the mechanical principles for instruction of physical motor skills. The focus is on the applied science as it relates to the teaching, coaching, and training of various physical skills and activities. Students will participate in the scientific analysis of movement. The course integrates athletic and health-fitness perspectives on movement training and enables students to critique and design appropriate movement skill progressions for sport or exercise. A thorough understanding and background in anatomy is essential for successful integration into this course content. *Prerequisites:* BI 2030. *Offered every spring. (4 Credits)*

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. *(4 Credits)*

KI 3850 - Field Experience in Kinesiology

This practical experience is designed to offer experiential learning in a student's area of interest or to broaden a student's understanding and exposure to various settings related to kinesiology. Students actively participate and assist in determining the placement setting, which may include coaching, recreation and intramural programs, fitness center instruction or management, event

management, physical activity instruction and leadership, athletic training, sports nutrition practices, or other related areas in sport, wellness, recreation, and/or physical activity. Students taking this course will engage in hands on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to other future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the kinesiology major enroll in the first field experience in the sophomore year. *Prerequisites:* KI 1110, *Minimum of 24 credits earned. Variable Credits (1-4) May be repeated for credit with varying site experiences.*

- Elective(s)

4th Year

Fall

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility and endurance and learn how to most efficiently condition the human body for physical activity. The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites:* BI 2030, *Minimum of 60 credits earned. Offered every fall. (4 Credits)*

- Elective(s) (*minimum of 8 Credits*)

Spring

KI 4000 - Senior Seminar in Kinesiology

This capstone course focuses the kinesiology student on the challenges and responsibilities of

professional practice in the fields within Kinesiology. Interdisciplinary research, ethics, leadership, current issues and controversies, market trends, and in depth exploration of career planning and skill development and implementation for transitioning from the student to the professional are major components. An extensive research project (including a paper, oral presentation, and poster presentation) is the culminating outcome of this course. Open to kinesiology majors only. *Prerequisites: Minimum of 90 credits earned. Offered every spring. (4 Credits)*

- Elective(s) (*minimum of 8 Credits*)

Note:

*** Kinesiology majors must complete a minimum of two (2) of these courses, but may also complete more than two from this group of movement instruction skills courses.**

Natural Sciences

Through a study of the natural sciences, students better understand the scientific process. The breadth of courses that are offered under this associates degree allows for exploration of a variety of scientific fields. Students may choose course work that leads to increased understanding of the natural world and how better learn how people interact with the natural world.

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule to meet individual interests and goals.

Major

Natural Sciences, A.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and

responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Twelve Credits

Twelve Credits, provided that these twelve credits do not also count for discipline specific requirements, to taken from the following list:

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history,

political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

- LAS 2130

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

MT 1020 - College Algebra

This course is designed for students who need additional preparation for MT 1510 (Pre-calculus). The course will focus on the application of algebra to real world problems including introductory algebra topics such as: factoring polynomials, solving quadratic equations, graphing linear, quadratic, and other polynomial functions, rational functions, and solving systems of equations. Emphasis will be on conceptual understanding, learning in context, and solving real world problems using graphical, symbolic, and numeric representations. This course satisfies the Quantitative Literacy requirement *Offered every semester (4 Credits)*

24 additional credits

24 additional credits, selected from the following disciplines:

- Biology
- Chemistry
- Environmental Science
- Engineering
- Mathematics
- Physics

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Outdoor Education

This program balances the theories of wilderness leadership and experiential education utilizing skills development with active and intentional opportunities to lead. In doing so, this major prepares students for careers in outdoor education and to lead wilderness and adventure trips within the field of Outdoor Education. The blending of experiences in science, sport and recreation management, education and other departments is designed to enable students to support students in developing broad scope skills in order to find careers in a variety of fields requiring leadership or education. Some students may benefit from more electives leading to a double major or a minor. These decisions are done in conjunction with meeting with the advisor and discussing professional goals.

Learning Outcomes

Students completing the Outdoor Education will:

- Demonstrate a working application of a variety of leadership and educational theories
- Demonstrate teaching practices that support and enhance the goals of learning in all academic and wilderness settings for all ages
- Demonstrate environmental stewardship and eco-literacy through sustainable and Leave No Trace practices
- Demonstrate technical and social-emotional applied to management in a variety of outdoor education settings
- Be able to communicate effectively and emotionally both verbally and written
- Be able to lead individuals and groups effectively and accurately in a variety of wilderness and educational settings
- Demonstrate judgment and decision-making skills by applying prior knowledge attained during previous experiences
- Experience failure in a safe and intentional environment and learn from those mistakes in a manner that promotes sound judgment and skill development.

Experiential Learning Component

At the course level all OE courses embrace the Experiential Education mindset and maintain a comfortable balance between experiencing, reflecting, learning, and teaching. Many of the courses within the OE major are enhanced by student developed projects and incorporate the skills based courses as links to the lecture based courses to provide depth of the experience while in the classroom. Theories and experiences are aligned through a strong connection to the commitment of experiential education practices.

In addition to the courses within the major and minor New England College's Adventure Bound Programs for Educational and Leadership Opportunities is a prominent source of engagement for the students in the OE field. Adventure Bound programs (AB) are led primarily by students within the Outdoor Education (OE) field, however few non OE majors and minors participate. AB offers a wide variety of programs to faculty, staff, students, sports teams, and surrounding communities. The programs offered are team building on or off the Ropes course, Frisbee Golf, Camping, snowshoeing, XC skiing, nature education, wilderness skills, connecting with nature, and similar. Students are expected to participate in one AB offered experience during the OE 1110 course. In the upper level courses students are expected to lead/co-lead AB offered programs of their design.

All AB/OE programs are aligned with standards for Association for Experiential Education (AEE), Wilderness Education Association (WEA), and Association for Challenge Course

Technology (ACCT) and the students of NEC are an important part of the process. NEC Outdoor Education students are encouraged to manage the AB operations and maintain connections and relationships with outside communities. Each year new programs are offered to develop awareness and meet the needs of our NEC community and members of the outside community.

Examples of trips and programs: Indoor and Outdoor rock climbing, hiking, backpacking, ropes course experiences, xc skiing and snowshoeing, weekend camping trips, weekend ski trips, parent child overnight for grades 1-3, zip lining, aerial adventure park, back country skiing, week long adventure experiences, and more.

- Suggested Course Sequence

Requirements

(60 Credits Total)

Required Education Core

(20 Credits)

OE 3710 - Experiential Learning: From Dewey to Outward Bound

This course introduces students to the foundations of project-based, experiential learning in and out of classroom environments. Origins of experiential education including the work of theorists such as John Dewey, Kurt Hahn, and Paulo Freire and theories that sprouted the progressive movement in education, and experiential programs such as Outward Bound will be explored. Students will engage in active, outdoor learning with an emphasis on environmental education. Relationships between human beings, learning and the natural world are explored through organized learning activities and an expedition where students construct an integrated experiential project from start to finish. Students will become versed in developing lesson plans that meet national and state education standards. Prerequisites: 60 credits/3rd year status.

Offered spring semester even years. (4 Credits)

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

Required Outdoor Education Courses

(36 Credits)

Take either:

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory

experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

OR

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

And Take:

BI 2070 ES 2070 - New England Natural History

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites: BI 1111-BI 1112 or ES 1110 Offered in odd falls. (4 Credits)*

OE 1110 - Introduction to Outdoor Education

This course introduces students to the field of outdoor education through the focus on philosophical and theoretical foundation of leadership and team building through experiential education practices. This course will discuss a variety of issues related to outdoor education to include group dynamics, instructional practices, and programming through the use of the natural environment. This class also focuses on the personal leadership skills of the student and supports the growth of new leadership skills through practice and feedback in a supportive manner.

Offered every fall. (3 Credits) to be taken with OE2200.

OE 2200 - Ropes Course Theory and Application

This course will demonstrate a variety of safe team building and initiative activities using indoor and outdoor space, low ropes course elements, and high ropes course elements. The goal of this course is to identify a number of potential sequencing activities that may be used in order to apply team building techniques to k-12 grades, sports teams, clubs, professional groups, and so forth. This course is designed to apply the theories and leadership styles discussed in OE 1110 Introduction to Outdoor Education in a practical setting and environment. Emphasis on policies and procedures for maintaining and managing a ropes course will also be included. Students will be asked to lead and participate in numerous activities in all ropes course settings while practicing leadership techniques and skills. Students will be expected to participate in climbing and rescue techniques during the High Ropes portion of this course and will also be expected to work with School Programs. A specific focus on universal elements is implemented to ensure students can work with the universal population to design and implement appropriate adaptations and modifications to support success for students with all abilities. *Offered every fall. (3 Credits) To be taken with OE 1110.*

OE 3610 (KI/SM 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out.

Prerequisites: OE 1110 or SM 1510 or KI 1110. Minimum of 24 credits. Offered every spring. (4 Credits)

OE 2430 - Wilderness First Responder

This course is designed to provide students with the knowledge and skills needed to handle medical emergency situations found in remote locations. Students will develop an awareness of the responsibility they will have of people in their care and themselves. The ability to determine the appropriate treatment and care needed for a patient in a wilderness setting is tested through a final Mock Rescue. The course will place emphasis on preventative steps and decision making... This course utilizes the true intent of experiential education by providing experiences that build upon prior knowledge until the concepts are adequately grasped. WRF Certification is granted by maintaining a grade of B or higher and demonstrating skills through the weekly practical simulation. This course is great for students who are OE majors or looking to develop wilderness medicine skills for recreating in the backcountry. Prerequisites: 30 credits/2nd year status. *Offered fall semesters even years. (4 Credits) Certification fees.*

OE 3870 - Outdoor Adventure Operations and Management

This course explores risk management and policies and procedures of running or working within the Outdoor Education and adventure fields. Students will learn how to assess risk, manage risk, interpret and develop policies, and write operating procedures for ropes courses, equipment use and adventure trips. This course prepares students for working in the field of outdoor education from the policies, procedures, and operations management perspective. Students participate in two group efforts that demonstrate experiential learning and social incorporation of technical skills understanding within the outdoor education/recreation field. Prerequisites: 60 credits/Junior status. *Offered Fall semesters odd years. (4 Credits)*

OE 4610 - Capstone Experience: Leading Trips and Career Exploration

As the culminating course in Outdoor Education students will be expected to define their leadership skills through reflection, leadership opportunities, and site visitation. Students are expected to discover areas of their leadership that can be enhanced and developed through continuing education and portfolio development. This course will represent the pinnacle of the outdoor leadership student's degree completion. Students will prepare for employment by developing their resumes and practicing interview skills and etiquette. As a class the students will visit a variety of places that offer work in the outdoor leadership field. The course is driven by the skill and goals of the students in a collaborative effort to develop and enhance leadership

opportunities. Prerequisites: 60 credits/Junior status/OE major or minor. *Offered spring semesters odd years. (4 Credits)*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

Choose one from the following:

OE 4910 - Internship in Outdoor Education

The internship opportunities are designed to offer insight and experiential learning in an area of student's interest. Students should develop an opportunity with the Outdoor Education advisor. Other site specific requirements may apply. *Prerequisites: 75 credits/Junior status/OE major or minor. Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits) Other site specific requirements may apply.*

OR

OE 4920 - Practicum in Outdoor Education

The practicum opportunities are designed to offer insight and experiential learning in an area of student's interest. Students should develop an opportunity with the Outdoor Education advisor. *Prerequisites: 75 credits/Junior status/OE major or minor. Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits) Other site specific requirements may apply.*

Skills-Based OE courses (1 Credit Each)

Choose 4 skills-based courses (1 Credit each)

OE 1200 - Topics

This course may offer different topics on technical skills in a variety of formats; presentation, hands-on application, demonstration, and so forth. *Variable Credit (1 -2)*

OE 1215 - Hiking/Backpacking in the White Mountains

Either backpacking through the White Mountains of New Hampshire over the course of 3-4 consecutive days or summiting 4-5 peaks over the course of 7 weeks. *Variations offered frequently. (1 Credit)*

OE 1230 - Meal and Menu Planning

Good meals and nutrition are important for any athlete, this course enables the students to explore a variety of meals through preparation for the backcountry. *(1 Credit)*

OE 1240 - Rock Climbing

Basic rock climbing skills and wall management are covered in the course over 3 days in 7 weeks. *(1 Credit)*

OE 1245 - Advanced Rock Climbing

Beyond the anchor set-up for top roping, this course focus on the traditional placement of climbing gear, route selection, and leading techniques. *(1 Credit)*

OE 1260 - Orienteering

The basics of map and compass land navigation is practiced and how to utilize a GPS beyond the basic capabilities for use in the backcountry. *(1 Credit)*

OE 1270 - Canoeing/Kayaking

Whether it be a river, lake, or ocean water travel with canoes and kayaks is exciting. Proper technique and safety skills are a main focus. *(1 Credit)*

OE 1280 - Ropes Course facilitation

Beyond running ropes courses this course explores the variety of courses available to participants from challenge courses, to zip lining, to therapeutic and educational aerial adventures. *(1 Credit)*

OE 1290 - Mountain Biking

This course is designed to focus on either mountain biking technique or bike touring throughout New England and may include camping skills. *Variations offered frequently. (1 Credit)*

OE 1300 - Topics

This course may offer different topics on technical skills in a variety of formats; presentation, hands-on application, demonstration, and so forth. *Variable Credit (1 -2)*

OE 1310 - Winter Camping

Spending a weekend camping and participating in small hikes each day with an introduction to ways to keep warm during the day and night is the focus of this course. *(1 Credit)*

OE 1320 - Winter Backpacking/mountaineering

During a weekend students will explore the White Mountains of NH and learn technical skills needed in order to summit and return safely with mountaineering gear. *(1 Credit)*

OE 1340 - XC-Skiing/Snowshoeing

A basic course of how to travel with and use X-C skis and snowshoes. *This course will usually occur over the course of 7 weeks in the early spring semester. (1 Credit)*

OE 1350 - Backcountry Skiing/Snowboarding

Over the course of a few days or one weekend students will develop skills needed to seek terrain for backcountry skiing/Snowboarding. Skiers and snowboarders interested in this course should be able demonstrate level 3/intermediate skill level for sliding on snow. *(1 Credit)*

OE 1360 - Ice Climbing

Spend time on the side of an ice cliff learning the skills to set up anchors and use ice tools to climb efficiently. *(1 Credit)*

OE 1370 - Avalanche Awareness

Travelling in the backcountry during winter is tricky. Being able to read the terrain and understand the snow and slide potential can have a direct impact on your experience. *(1 Credit)*

OE 1400 - Wilderness First Aid/ Wilderness First Responder Recertification

This course is designed to provide students with a review or introduction to wilderness medicine skills. *Prerequisites: OE 1110 or SM 1510 or KI 1110 or OE 2430. (1 Credit)*

Minor

Outdoor Education Minor

- Description and Learning Outcomes

Requirements

(20 Credits Total)

Students interested in earning a minor in Outdoor Education will complete:

OE 1110 - Introduction to Outdoor Education

This course introduces students to the field of outdoor education through the focus on philosophical and theoretical foundation of leadership and team building through experiential education practices. This course will discuss a variety of issues related to outdoor education to include group dynamics, instructional practices, and programming through the use of the natural environment. This class also focuses on the personal leadership skills of the student and supports the growth of new leadership skills through practice and feedback in a supportive manner.

Offered every fall. (3 Credits) to be taken with OE2200.

OE 2200 - Ropes Course Theory and Application

This course will demonstrate a variety of safe team building and initiative activities using indoor and outdoor space, low ropes course elements, and high ropes course elements. The goal of this course is to identify a number of potential sequencing activities that may be used in order to apply team building techniques to k-12 grades, sports teams, clubs, professional groups, and so forth. This course is designed to apply the theories and leadership styles discussed in OE 1110 Introduction to Outdoor Education in a practical setting and environment. Emphasis on policies and procedures for maintaining and managing a ropes course will also be included. Students will be asked to lead and participate in numerous activities in all ropes course settings while practicing leadership techniques and skills. Students will be expected to participate in climbing and rescue techniques during the High Ropes portion of this course and will also be expected to work with School Programs. A specific focus on universal elements is implemented to ensure students can work with the universal population to design and implement appropriate

adaptations and modifications to support success for students with all abilities. *Offered every fall. (3 Credits) To be taken with OE 1110.*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

Select one class from the following:

OE 3610 (KI/SM 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out. *Prerequisites: OE 1110 or SM 1510 or KI 1110. Minimum of 24 credits. Offered every spring. (4 Credits)*

OE 3710 - Experiential Learning: From Dewey to Outward Bound

This course introduces students to the foundations of project-based, experiential learning in and out of classroom environments. Origins of experiential education including the work of theorists such as John Dewey, Kurt Hahn, and Paulo Freire and theories that sprouted the progressive movement in education, and experiential programs such as Outward Bound will be explored. Students will engage in active, outdoor learning with an emphasis on environmental education. Relationships between human beings, learning and the natural world are explored through organized learning activities and an expedition where students construct an integrated

experiential project from start to finish. Students will become versed in developing lesson plans that meet national and state education standards. Prerequisites: 60 credits/3rd year status.

Offered spring semester even years. (4 Credits)

Select one class from the following:

OE 2430 - Wilderness First Responder

This course is designed to provide students with the knowledge and skills needed to handle medical emergency situations found in remote locations. Students will develop an awareness of the responsibility they will have of people in their care and themselves. The ability to determine the appropriate treatment and care needed for a patient in a wilderness setting is tested through a final Mock Rescue. The course will place emphasis on preventative steps and decision making... This course utilizes the true intent of experiential education by providing experiences that build upon prior knowledge until the concepts are adequately grasped. WRF Certification is granted by maintaining a grade of B or higher and demonstrating skills through the weekly practical simulation. This course is great for students who are OE majors or looking to develop wilderness medicine skills for recreating in the backcountry. Prerequisites: 30 credits/2nd year status. *Offered fall semesters even years. (4 Credits) Certification fees.*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

Select 3 activity Courses from the following: (1 Credit each):

OE 1200 - Topics

This course may offer different topics on technical skills in a variety of formats; presentation, hands-on application, demonstration, and so forth. *Variable Credit (1 -2)*

OE 1215 - Hiking/Backpacking in the White Mountains

Either backpacking through the White Mountains of New Hampshire over the course of 3-4 consecutive days or summiting 4-5 peaks over the course of 7 weeks. *Variations offered frequently. (1 Credit)*

OE 1230 - Meal and Menu Planning

Good meals and nutrition are important for any athlete, this course enables the students to explore a variety of meals through preparation for the backcountry. *(1 Credit)*

OE 1240 - Rock Climbing

Basic rock climbing skills and wall management are covered in the course over 3 days in 7 weeks. *(1 Credit)*

OE 1245 - Advanced Rock Climbing

Beyond the anchor set-up for top roping, this course focus on the traditional placement of climbing gear, route selection, and leading techniques. *(1 Credit)*

OE 1260 - Orienteering

The basics of map and compass land navigation is practiced and how to utilize a GPS beyond the basic capabilities for use in the backcountry. *(1 Credit)*

OE 1270 - Canoeing/Kayaking

Whether it be a river, lake, or ocean water travel with canoes and kayaks is exciting. Proper technique and safety skills are a main focus. *(1 Credit)*

OE 1280 - Ropes Course facilitation

Beyond running ropes courses this course explores the variety of courses available to participants from challenge courses, to zip lining, to therapeutic and educational aerial adventures. *(1 Credit)*

OE 1290 - Mountain Biking

This course is designed to focus on either mountain biking technique or bike touring throughout New England and may include camping skills. *Variations offered frequently. (1 Credit)*

OE 1300 - Topics

This course may offer different topics on technical skills in a variety of formats; presentation, hands-on application, demonstration, and so forth. *Variable Credit (1 -2)*

OE 1310 - Winter Camping

Spending a weekend camping and participating in small hikes each day with an introduction to ways to keep warm during the day and night is the focus of this course. *(1 Credit)*

OE 1320 - Winter Backpacking/mountaineering

During a weekend students will explore the White Mountains of NH and learn technical skills needed in order to summit and return safely with mountaineering gear. *(1 Credit)*

OE 1340 - XC-Skiing/Snowshoeing

A basic course of how to travel with and use X-C skis and snowshoes. *This course will usually occur over the course of 7 weeks in the early spring semester. (1 Credit)*

OE 1350 - Backcountry Skiing/Snowboarding

Over the course of a few days or one weekend students will develop skills needed to seek terrain for backcountry skiing/Snowboarding. Skiers and snowboarders interested in this course should be able demonstrate level 3/intermediate skill level for sliding on snow. *(1 Credit)*

OE 1360 - Ice Climbing

Spend time on the side of an ice cliff learning the skills to set up anchors and use ice tools to climb efficiently. *(1 Credit)*

OE 1370 - Avalanche Awareness

Travelling in the backcountry during winter is tricky. Being able to read the terrain and understand the snow and slide potential can have a direct impact on your experience. *(1 Credit)*

OE 1400 - Wilderness First Aid/ Wilderness First Responder Recertification

This course is designed to provide students with a review or introduction to wilderness medicine skills. *Prerequisites: OE 1110 or SM 1510 or KI 1110 or OE 2430. (1 Credit)*

Other Programs

Outdoor Education Suggested Sequence of Courses

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

- MT 1000+ College Level Math Requirement (4 Credits)

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

OE 2200 - Ropes Course Theory and Application

This course will demonstrate a variety of safe team building and initiative activities using indoor

and outdoor space, low ropes course elements, and high ropes course elements. The goal of this course is to identify a number of potential sequencing activities that may be used in order to apply team building techniques to k-12 grades, sports teams, clubs, professional groups, and so forth. This course is designed to apply the theories and leadership styles discussed in OE 1110 Introduction to Outdoor Education in a practical setting and environment. Emphasis on policies and procedures for maintaining and managing a ropes course will also be included. Students will be asked to lead and participate in numerous activities in all ropes course settings while practicing leadership techniques and skills. Students will be expected to participate in climbing and rescue techniques during the High Ropes portion of this course and will also be expected to work with School Programs. A specific focus on universal elements is implemented to ensure students can work with the universal population to design and implement appropriate adaptations and modifications to support success for students with all abilities. *Offered every fall. (3 Credits) To be taken with OE 1110.*

OE 1110 - Introduction to Outdoor Education

This course introduces students to the field of outdoor education through the focus on philosophical and theoretical foundation of leadership and team building through experiential education practices. This course will discuss a variety of issues related to outdoor education to include group dynamics, instructional practices, and programming through the use of the natural environment. This class also focuses on the personal leadership skills of the student and supports the growth of new leadership skills through practice and feedback in a supportive manner.

Offered every fall. (3 Credits) to be taken with OE2200.

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Spring

- Elective (4 Credits)

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. (4 Credits)

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

Second Year

Fall

OE 2430 - Wilderness First Responder

This course is designed to provide students with the knowledge and skills needed to handle medical emergency situations found in remote locations. Students will develop an awareness of the responsibility they will have of people in their care and themselves. The ability to determine the appropriate treatment and care needed for a patient in a wilderness setting is tested through a final Mock Rescue. The course will place emphasis on preventative steps and decision making... This course utilizes the true intent of experiential education by providing experiences that build upon prior knowledge until the concepts are adequately grasped. WRF Certification is granted by maintaining a grade of B or higher and demonstrating skills through the weekly practical simulation. This course is great for students who are OE majors or looking to develop wilderness medicine skills for recreating in the backcountry. Prerequisites: 30 credits/2nd year status. *Offered fall semesters even years. (4 Credits) Certification fees.*

- OE 1200/OE 1300 (1 Credit)

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. (4 Credits)

LAS 3 (LAS 2110) - Creative Arts

Seminars in the Creative Arts expose students to the innovative, imaginative side of human experience; are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

Spring

OE 3610 (KI/SM 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out.

Prerequisites: OE 1110 or SM 1510 or KI 1110. Minimum of 24 credits. Offered every spring. (4 Credits)

- OE 1200/OE 1300 (1 Credit)

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

LAS 6 (LAS 2140) - Humanities

The humanities entails study in the academic disciplines relating to the human condition, including (but not limited to) literature, philosophy, the fine arts, art history, history, and religion. This seminar bolsters students' analytical and critical thinking skills, while cultivating an appreciation of beauty and elegance in the search for truth. (4 Credits)

Third Year

Fall

BI 2070 ES 2070 - New England Natural History

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites:* BI 1111-BI 1112 or ES 1110 *Offered in odd falls. (4 Credits)*

- OE 1200/OE 1300 (1 cCredit)

OE 3870 - Outdoor Adventure Operations and Management

This course explores risk management and policies and procedures of running or working within the Outdoor Education and adventure fields. Students will learn how to assess risk, manage risk, interpret and develop policies, and write operating procedures for ropes courses, equipment use and adventure trips. This course prepares students for working in the field of outdoor education from the policies, procedures, and operations management perspective. Students participate in two group efforts that demonstrate experiential learning and social incorporation of technical skills understanding within the outdoor education/recreation field. *Prerequisites:* 60 credits/Junior status. *Offered Fall semesters odd years. (4 Credits)*

- OE 1200/OE 1300 (1 Credit)

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars,

it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

Spring

OE 3710 - Experiential Learning: From Dewey to Outward Bound

This course introduces students to the foundations of project-based, experiential learning in and out of classroom environments. Origins of experiential education including the work of theorists such as John Dewey, Kurt Hahn, and Paulo Freire and theories that sprouted the progressive movement in education, and experiential programs such as Outward Bound will be explored. Students will engage in active, outdoor learning with an emphasis on environmental education. Relationships between human beings, learning and the natural world are explored through organized learning activities and an expedition where students construct an integrated experiential project from start to finish. Students will become versed in developing lesson plans that meet national and state education standards. *Prerequisites: 60 credits/3rd year status. Offered spring semester even years. (4 Credits)*

OE 4910 - Internship in Outdoor Education

The internship opportunities are designed to offer insight and experiential learning in an area of student's interest. Students should develop an opportunity with the Outdoor Education advisor. Other site specific requirements may apply. *Prerequisites: 75 credits/Junior status/OE major or minor. Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits) Other site specific requirements may apply.*

OR

OE 4920 - Practicum in Outdoor Education

The practicum opportunities are designed to offer insight and experiential learning in an area of student's interest. Students should develop an opportunity with the Outdoor Education advisor.

Prerequisites: 75 credits/Junior status/OE major or minor. *Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits) Other site specific requirements may apply.*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

4th Year

Fall

OE 4910 - Internship in Outdoor Education

The internship opportunities are designed to offer insight and experiential learning in an area of

student's interest. Students should develop an opportunity with the Outdoor Education advisor. Other site specific requirements may apply. Prerequisites: 75 credits/Junior status/OE major or minor. *Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits)* Other site specific requirements may apply.

OR

OE 4920 - Practicum in Outdoor Education

The practicum opportunities are designed to offer insight and experiential learning in an area of student's interest. Students should develop an opportunity with the Outdoor Education advisor. Prerequisites: 75 credits/Junior status/OE major or minor. *Taken during spring junior year or fall senior year. Contract required. (4 - 12 Credits)* Other site specific requirements may apply.

- LAS Elective (4 Credits)
- Elective (4 Credits)
- Elective (4 Credits)

Spring

OE 4610 - Capstone Experience: Leading Trips and Career Exploration

As the culminating course in Outdoor Education students will be expected to define their leadership skills through reflection, leadership opportunities, and site visitation. Students are expected to discover areas of their leadership that can be enhanced and developed through continuing education and portfolio development. This course will represent the pinnacle of the outdoor leadership student's degree completion. Students will prepare for employment by developing their resumes and practicing interview skills and etiquette. As a class the students will visit a variety of places that offer work in the outdoor leadership field. The course is driven by the skill and goals of the students in a collaborative effort to develop and enhance leadership opportunities. Prerequisites: 60 credits/Junior status/OE major or minor. *Offered spring semesters odd years. (4 Credits)*

- Elective (4 Credits)
- Elective (4 Credits)

Physics

Political Science

The Department of Political Science at New England College provides students with opportunities to investigate political phenomena ranging from the behavior of the individual citizen to relations among states in the international arena. The program seeks to develop awareness of the moral and ethical implications of political action as well as understanding of political institutions and processes from diverse perspectives. The study of political science emphasizes critical thinking in preparing students for roles as engaged citizens of their community, country, and the world. Our goal is to develop a citizen scholar who understands the challenges and opportunities around them and are in a position to make a difference.

The department maintains a strong commitment to the development of students' writing abilities. Most courses in the department require one or more papers. The senior level seminars require a major paper based on significant independent student research. In addition, each political science major, under the guidance of a faculty member, writes and publicly defends a senior thesis or completes a substantive capstone project.

Learning Outcomes

Students completing the Political Science Program should have:

- Knowledge of the methods, approaches, or theories used in accumulating and interpreting information applicable to the discipline of political science.
- An ability to demonstrate the basic research skills necessary to write a paper in the discipline of political science.
- An ability to demonstrate critical thinking skills and formulate and defend a thesis.
- Knowledge of the content of at least two of the following subfields within political science: American Government, Comparative Politics, International Relations, Constitutional Law, and/or Public Policy.
- An understanding of the basic values of American civic culture.
- A basic knowledge of the political institutions and processes of the government of the United States.
- Knowledge of the dynamics of politics and power at work in the modern world.

- An understanding of the major issues affecting international relations.

Signature Immersion Experience

Each major will complete a senior capstone project in their senior year. This project will be conducted over the course of three 2-credit courses (Thesis I, Thesis II and Thesis III) and will begin in Spring of the Junior year.

Each student is asked to undertake an independent learning experience where they will immerse themselves in research and writing on a specific topic of their choosing. Faculty works with the student on topic selection and making sure they meet deliverable milestones and provide support through faculty and library staff. The student completes a writing intensive project which can be the traditional thesis or a project designed in consultation with a member of the political science faculty.

The student constructs a committee (with representatives across departments) that advises through the process. Additionally, the senior capstone seminar class involves significant feedback from fellow students. At the end of process the student does a "defense" which includes a public presentation with comments and feedback from the faculty on the committee.

Major

Political Science, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

40 Credits

Core Courses

(20 credits)

Choose one of these two

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

Choose one of these two

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

HS 1120 - Western Civilization Since 1500

An introductory survey of European history from ancient time to the recent past, the themes of this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1110.*

Take each of the following

PO 2040 (HS 2040) - Research Methods

This course will be taken by all political science majors in the fall semester of their sophomore year. This class will provide an overview of researching in political science. Students will learn about the scientific method, using the library to do research, citation and bibliography styles, and how to write a book review, an outline, then a literature review. This course will provide all political science students the tools to do research in their upper division political science classes. (2 Credits)

PO 4910 (HS 4910) - Internship/Experiential Learning

An internship program in state, local, national or international government, when available, may be taken by qualified students on a semester, year, or summer basis. Approval of the faculty is required. *Contract required. Variable credit (1-16)*

PO 4930 (HS 4930) - Senior Thesis I

The senior thesis is the summation of the political science major's career at NEC. The thesis is a work of original scholarship which demonstrates clearly the student's grasp of a topic, mature understanding of it, and the ability to clearly and emphatically express that understanding and grasp to others. The senior thesis will normally conclude in the senior spring. This seminar will begin the thesis project. Topic selection, research, bibliography and outline are intended results. This course is required of all political science majors, *and is offered spring or summer. (2 Credits)*

PO 4940 (HS 4940) - Senior Thesis II

The process continues with another seminar. In this term students will begin to write the thesis. A significant draft is expected. This course is required of all history majors *Prerequisites: PO 4930 (HS 4930). offered every fall term. (2 Credits)*

PO 4950 (HS 4950) - Senior Thesis III

The process culminates in the senior spring with a significant piece of original written work and a public defense. In extremely rare cases, another form of capstone project may be substituted with advisor's permission. *Prerequisites:* PO 4940 (HS 4940). (2 Credits)

Choose 20 credits from the following

PO 2110 - State and Local Government and Politics

The organization, structure, and functions of state governments and of municipal, county, town, and other local governments of the United States is examined. (4 Credits)

PO 2910 - Public Policy Analysis

This course provides an analytical survey of policy formulation and implementation in the United States, together with an examination of the impact of policy upon individuals and groups in American society. Students will examine current public policy issues. (4 Credits)

PO 3110 - The Presidency and the Executive Branch

A study of how we select the president; of presidential powers and limitations; the role the chief executive should play in a democracy; and of relations between the presidency and the departments and agencies of the executive branch. (4 Credits)

PO 3120 - Congress and the Legislative Process

This course examines the role Congress plays in the government of the United States. How do members of Congress get elected? What work do they do in office, and how do they organize themselves to do it? What role do political parties play? How well or how poorly does Congress represent the will of the people? (4 Credits)

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

CJ 1140 - U.S. Legal Systems

This course provides an introduction to the American Legal System, including its history, philosophy, and practices. Students will consider the structure and function of the legal system, several substantive areas of the law (e.g., torts and contract law), and the dynamic relationship between law and social policy. *(4 Credits)*

PO 3140 - Campaigns and Elections

This course examines the election process. Students will manage a hypothetical campaign from its inception to a mock election day. The course will focus on relevant electoral issues such as candidates, the media, campaign finance, party politics, and voter turnout. *(4 Credits)*

PO 3450 - U.S. Foreign Policy

This course provides student with an opportunity to analyze American foreign policy from the perspectives of both domestic American politics and international relations. Policy with reference to the Soviet Union, the Third World, political and military allies, nuclear and conventional weapons, international organizations and human rights are considered. *(4 Credits)*

PO 3580 - Global Security

This course examines international security in a broad context. Beginning with notions of national security and domestic sources of foreign policy, it will expand to include analysis of timely security issues such as the proliferation of weapons of mass destruction, ballistic missile defense, arms control and disarmament, arms sales, and the military industrial complex. *(4 Credits)*

PO 3910 (CJ 3910) - Understanding the Causes of Terrorism

This course is designed to introduce students to the study of terrorism and its challenges for national security. Students will explore numerous features of the subject including, but not limited to, definitional dilemmas, the origins and evolution of terrorism, tactical and targeting innovation, the psychology and characteristics of terrorist actors, including women, case studies (e.g. Palestine, Sri Lanka, Colombia, Ireland, North America), and counter-terrorism strategies. Both international and domestic terrorist actors will be explored. *(4 Credits)*

PO 3990 - Topics in Political Science

Special topics in the study of political science at the advanced level. *(4 Credits)*

PO 4110 - Regional Politics

This course will introduce students to the historical development of government and politics in a specified geographical region. The course will consider such topics as colonialism, nationalism, international economics, and international security. Using the comparative approach, the governments of the major states of the region will be discussed as well. *(4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

PO 4810 - Directed Study in Politics

Course of study to be arranged between faculty and student in the field of Political Science. *Contract required. Variable credit. (1-4)*

PO 4820 (HS 4820) - Individually Designed Learning Plan

Confronted with the many problems facing our world, a student (or group of students) may undertake (in cooperation with a faculty mentor) an advanced project involving formulation of a research plan involving numerous sources on and off campus designed to lay out in detail the history and nature of the problem and one or more potential solutions, based on extensive evidence. Public presentation of the project and its outcome is expected. *Contract required.*
Variable credit (2-16)

Note:

All elective courses in History are applicable in the Political Science major with the understanding that to proceed in the field, the preponderance of courses should be in the major field. So, a student wishing to enroll in a graduate program in Political Science should show more Political Science courses in the major. *An internship of 4-12 credits is required for the History or Political Science major. All of those credits will count toward the 120 required for the BA, however only 4 credits will apply toward the 24 elective credits in the major.

Signature Immersion Experience

Each major will complete a senior capstone project in their senior year. This project will be conducted over the course of three 2-credit courses (Thesis I, Thesis II and Thesis III) and will begin in Spring of the Junior year.

Each student is asked to undertake an independent learning experience where they will immerse themselves in research and writing on a specific topic of their choosing. Faculty works with the student on topic selection and making sure they meet deliverable milestones and provide support through faculty and library staff. The student completes a writing intensive project which can be the traditional thesis or a project designed in consultation with a member of the political science faculty.

The student constructs a committee (with representatives across departments) that advises through the process. Additionally, the senior capstone seminar class involves significant feedback from fellow students. At the end of process the student does a "defense" which includes a public presentation with comments and feedback from the faculty on the committee.

Minor

Political Science Minor

- Description and Learning Outcomes

Requirements

Choose one of these two

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

Choose one of these two

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

HS 1120 - Western Civilization Since 1500

An introductory survey of European history from ancient time to the recent past, the themes of

this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1110.*

16 credits

- *AND Take 16 credits from course with a designation PO 2000 or above.*

Note(s):

All elective courses in History are applicable in the Political Science major with the understanding that to proceed in the field, the preponderance of courses should be in the major field. So, a student wishing to enroll in a graduate program in Political Science should show more Political Science courses in the major. *An internship of 4-12 credits is required for the History or Political Science major. All of those credits will count toward the 120 required for the BA, however only 4 credits will apply toward the 24 elective credits in the major.

Other Programs

Political Science Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the

Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

- HS 1120

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

- Quantitative Literacy Requirement
- Elective

Second Year

Fall

PO 2040 (HS 2040) - Research Methods

This course will be taken by all political science majors in the fall semester of their sophomore year. This class will provide an overview of researching in political science. Students will learn about the scientific method, using the library to do research, citation and bibliography styles, and how to write a book review, an outline, then a literature review. This course will provide all political science students the tools to do research in their upper division political science classes. *(2 Credits)*

- PO Elective

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

- Elective

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

- PO Elective
- Elective
- Elective

Third Year

Fall

- PO Elective
- LAS 2130 (LAS 5)
- Elective
- Elective

Spring

- PO Elective
- PO Elective

PO 4930 (HS 4930) - Senior Thesis I

The senior thesis is the summation of the political science major's career at NEC. The thesis is a work of original scholarship which demonstrates clearly the student's grasp of a topic, mature understanding of it, and the ability to clearly and emphatically express that understanding and grasp to others. The senior thesis will normally conclude in the senior spring. This seminar will begin the thesis project. Topic selection, research, bibliography and outline are intended results. This course is required of all political science majors, *and is offered spring or summer. (2 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

4th Year

Fall

PO 4940 (HS 4940) - Senior Thesis II

The process continues with another seminar. In this term students will begin to write the thesis. A significant draft is expected. This course is required of all history majors *Prerequisites:* PO 4930 (HS 4930). *offered every fall term. (2 Credits)*

- PO Elective

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

- Elective

Spring

PO 4950 (HS 4950) - Senior Thesis III

The process culminates in the senior spring with a significant piece of original written work and a public defense. In extremely rare cases, another form of capstone project may be substituted with advisor's permission. *Prerequisites:* PO 4940 (HS 4940). *(2 Credits)*

- PO Elective

- Elective

Pre-Engineering Studies

Please note: New students will not be accepted after 2016-17 as this program will be phased out and no longer offered.

Engineering is arguably the field that best embodies both the natural and civic environments. It is grounded in the study of the natural world, specifically the physical and chemical principles that guide how the world operates. Unlike in pure science, however, engineering is focused on how those principles are applied within civic environments. How can physical ideas be best used to build transportation systems, where "best" is determined by the needs of a particular community? How can chemical principles be used to create a technique that addresses the challenges facing a company or community? How are the goals defined by science (for instance mechanical stability or thermodynamic efficiency) met within the constraints provided by civil society (such as cost efficiency or resource allocation)?

This pre-engineering program is designed to have students take introductory classes for 2 or 3 years and then transfer to an engineering school to complete their BS in engineering. The courses listed below are required by almost all engineering majors at any engineering school.

Learning Outcomes

Students completing the Pre-Engineering Studies Associates Degree should be able to demonstrate:

- Proficiency applying fundamental physical principles to solve real-world problems.
- Proficiency in calculus as applied to real-world problems
- Competency in skills (writing, mathematics, economics) necessary for success as an engineering major.

Significant Experiential Learning Opportunity

The program requires students to learn about at least two different engineering careers from experiences they have in the wider world. This could be done by interviewing engineers, visiting engineering firms, or speaking with faculty at an engineering school. To document and share

their experiences, students will be required to write a paper and make an oral presentation to science and mathematics faculty and the other pre-engineering majors. Presentations will be made at a yearly "Engineering Experiences Colloquium". This experience will not carry any academic credit.

Major

Pre-Engineering, A.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(32 credits)

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration.

Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement.

Prerequisites: C- or better in MT 1510 Offered every year. (4 Credits)

MT 2520 - Calculus II

This course is a continuation of the calculus series. The course will investigate concepts and applications of: differentiation and integration of exponential, logarithmic, trigonometric, hyperbolic functions and their inverses; techniques of integration and Computer Algebra Systems; L'Hôpital's rule; improper integrals; and infinite series. *Prerequisites: C- or better in MT 2510. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites: CH 2110. Offered every Spring. (4 Credits)*

PH 2310 - Calculus-based Physics I

An introduction to mechanics (including kinematics, forces, energy, and torque), fluids, and oscillations and waves, using calculus. Laboratories provide the opportunity to explore these concepts through hands-on experimentation. *Prerequisites: MT 2510. (4 Credits)*

PH 2320 - Calculus-based Physics II

A continuation of PH 2310. Topics include thermodynamics, optics, electricity, and magnetism. Laboratories provide the opportunity to explore these concepts through hands-on experimentation. *Prerequisites: PH 2310 and MT 2520. (4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. *(4 Credits)*

Note:

Each student's progress will be regularly reviewed. Students who do not complete MT 1510 - Precalculus and CH 2110 - General Chemistry I with grades better than a "C" during their first semester will be informed that they may have difficulty transferring to an engineering school after two years. Midterm grades for MT 2510 - Calculus I and CH 2120 - General Chemistry II in the spring semester will be used to make a final recommendation to the students as to whether they should continue in the program. This assessment is early enough that students can switch to another major for the start of their second year.

Other Programs

Pre-Engineering Studies Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

- WT 1000

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. (4 Credits)

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and

society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Psychology

Psychology emphasizes the fundamental importance of understanding human behavior and thought. It is a wide-ranging discipline, encompassing diverse fields of study. It is also, by its history and nature, an activist, applied discipline. Students focus on such diverse topics as human development, prejudice, aggression, abnormal psychology, health, and social interaction, not solely to acquire knowledge, but also with the intent of using this knowledge to better their community and their world.

At New England College, it is the goal of the faculty to merge practical skills with theoretical content and critical thinking abilities. One aim of the program is to prepare students for continued study at the graduate level. Another goal is to prepare students for careers in counseling and human services, business, education, community health, and political and social service. In combination with other programs of study (e.g., art, international business, communication, drama, environmental science, women's studies, philosophy), a psychology major provides students with a variety of career options upon graduation. In all courses, students are challenged to move beyond their common sense and personal history and to acquire an understanding of how questions about human functioning are answered via the scientific method of systematic investigation and hypothesis testing. Moreover, the faculty make psychology meaningful and relevant to students so that what they learn can be applied to real life skills such as parenting, interpersonal relationships, health, conflict resolution, motivational and emotional difficulties, and personal development.

As one of the social sciences, psychology relates well to programs in business, economics, education, communication, political science, and sociology. As a health science, psychology is concerned with individual and collective well-being and, therefore, encourages important

connections to medicine, law and environmental studies. Additionally, psychology is becoming more attentive to cross-cultural and international issues. The Psychology Department is part of the Natural and Social Sciences Division.

Faculty members in psychology have a wide range of research interests, including such areas as health, prosocial behavior, human sexuality, violence, attachment theories and environmental influences on childhood learning abilities and behaviors, life-span developmental issues, clinical psychology, and contemplative approaches to psychology, multicultural and cross-cultural considerations, and community mental health. The members of the psychology faculty work closely with students and are committed to assisting students in their efforts to realize their individual educational goals.

Two concentrations are offered in psychology: general psychology and human services.

Learning Outcomes

Students completing the Psychology Program should possess the following:

- Knowledge Base of Psychology - Demonstrate familiarity with the major concepts, theoretical perspectives, empirical findings, and historical trends in psychology.
- Research Methods in Psychology - Understand and apply basic research methods in psychology, including research design, data analysis, and interpretation.
- Critical Thinking Skills in Psychology - Respect and use critical and creative thinking, skeptical inquiry, and, when possible, the scientific approach to solve problems related to behavior and mental processes.
- Application of Psychology - Understand and apply psychological principles to personal, social, and organizational issues.
- Values in Psychology - Value empirical evidence, tolerate ambiguity, act ethically, and reflect other values that are the underpinnings of psychology as a science.
- Information and Technological Literacy - Demonstrate information competence and the ability to use computers and other technology for many purposes.
- Communication Skills - Communicate effectively in a variety of formats.
- Multicultural Awareness - Recognize, understand, and respect the complexity of multicultural communities.
- Personal Development - Develop insight into their own and other's behavior and mental processes and apply effective strategies for self-management and self-improvement.
- Career Planning and Development - Pursue realistic ideas about how to implement their psychological knowledge, skills, and values in occupational pursuits in a variety of settings.

Experiential Learning Component

Most courses contain engaging demonstrations, field trips, and in-class guest presentations. Many classes also include service-learning components. All students are required to complete a novel research study. Qualified students are also encouraged to further pursue in-depth exploration of areas of personal interest, to present research at regional and national conferences and to collaborate with faculty on manuscripts and other aspects of research. Numerous practica opportunities are available and internship are required.

Major

Psychology, General, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(40+ Credits)

Students must complete the Core Courses and one of the Concentrations described below. A student may not earn more than two "C-" grades within the requirements of the major.

Psychology Core Courses

(32+Credits)

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

PS 2110 - Writing & Research in Psychology

Building on the specific content from 'Introduction to Psychology' this course presents various ways psychologists approach this uniquely human science. This course takes a long historical

view of the development of psychological types of thinking. It also discusses how social scientists engage in research with special attention to the scientific method. Students will learn to think critically about psychology research and culturally situate many of the attitudes and assumptions of psychology. *every semester (4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence

the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

PS 2050 - Social Psychology

An examination of the way the individual's behavior is affected by the behavior of others. Areas covered include aggression, conformity, attitude formation, methods of persuasion, altruism, environmental effects on behavior, prejudice and discrimination, and interpersonal attraction. This course satisfies the LAS 4 Social Sciences requirement. *Offered every fall. (4 Credits)*

PS 3210 - Abnormal Psychology

This course focuses on the causes, symptoms, definition, and treatments of psychological disorders. Emphasis is on the more serious forms of psychopathology. The complexities involved in judging normalcy (i.e. the forensic vs. clinical model); the correlation between delinquency and mental illness, deinstitutionalization, and the rights of the mentally ill are also studied. Prerequisites: PS 1110 and 45 Credits *every Fall (4 Credits)*

PS 4000 - Issues in Professional Practice: Psychology

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Psychology. Discussion of ethics in research and practice, consideration of current controversies in the fields and exploration of future trends and opportunities within the discipline are included. Suggested for Jr & Sr. status *every spring (4 Credits)*

PS 4220 - Research Methods

This seminar course involves an examination of the various research strategies used by psychologists and other social scientists. The advantages and disadvantages of each methodology are analyzed. Control, experimental and alternative designs, context, and standards for ethical research are discussed. A research project constitutes a major feature of the course. Students generate, conduct, write up, and present an original APA style research study. *Prerequisites: PS*

1110 or SO 1110, and PS 2310 or MT 2310 and one PS or SO 3000-level course. Offered every fall. (4 Credits)

PS 4910 - Internship

Internships are available to psychology majors who wish to develop a clearer understanding of a specific profession and develop skills needed to work in the human services field. The student must exhibit strong emotional maturity, a strong sense of responsibility and be approved by the majority of the psychology faculty. The student is expected to work on-site for a semester and to fulfill academic requirements of the internship (research, written assignments, seminar attendance, etc.). *Contract required. Variable Credits (1-16)*

General Psychology Concentration

Required: at least 16 credits of Psychology courses to be composed of:

- **12** credits from any PS designated course, **except** that only 4 credits may be a PS 2990 or 3990.
- **4 Credits from a 4000 level class from the list of** applied and engaged elective courses. (Students must have taken the necessary prerequisites).

Psychology, Human Service, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(40+ Credits)

Students must complete the Core Courses and one of the Concentrations described below. A student may not earn more than two "C-" grades within the requirements of the major.

Psychology Core Courses

(32+Credits)

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

PS 2110 - Writing & Research in Psychology

Building on the specific content from 'Introduction to Psychology' this course presents various ways psychologists approach this uniquely human science. This course takes a long historical view of the development of psychological types of thinking. It also discusses how social scientists engage in research with special attention to the scientific method. Students will learn to think critically about psychology research and culturally situate many of the attitudes and assumptions of psychology. *every semester (4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students.

This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

PS 2050 - Social Psychology

An examination of the way the individual's behavior is affected by the behavior of others. Areas covered include aggression, conformity, attitude formation, methods of persuasion, altruism, environmental effects on behavior, prejudice and discrimination, and interpersonal attraction. This course satisfies the LAS 4 Social Sciences requirement. *Offered every fall. (4 Credits)*

PS 3210 - Abnormal Psychology

This course focuses on the causes, symptoms, definition, and treatments of psychological disorders. Emphasis is on the more serious forms of psychopathology. The complexities involved in judging normalcy (i.e. the forensic vs. clinical model); the correlation between delinquency and mental illness, deinstitutionalization, and the rights of the mentally ill are also studied. *Prerequisites: PS 1110 and 45 Credits every Fall (4 Credits)*

PS 4000 - Issues in Professional Practice: Psychology

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Psychology. Discussion of ethics in research and practice,

consideration of current controversies in the fields and exploration of future trends and opportunities within the discipline are included. Suggested for Jr & Sr. status *every spring (4 Credits)*

PS 4220 - Research Methods

This seminar course involves an examination of the various research strategies used by psychologists and other social scientists. The advantages and disadvantages of each methodology are analyzed. Control, experimental and alternative designs, context, and standards for ethical research are discussed. A research project constitutes a major feature of the course. Students generate, conduct, write up, and present an original APA style research study. *Prerequisites: PS 1110 or SO 1110, and PS 2310 or MT 2310 and one PS or SO 3000-level course. Offered every fall. (4 Credits)*

PS 4910 - Internship

Internships are available to psychology majors who wish to develop a clearer understanding of a specific profession and develop skills needed to work in the human services field. The student is expected to work on-site for a semester and to fulfill academic requirements of the internship (research, written assignments, seminar attendance, etc.). *Contract required. Variable Credits (1-16)*

Human Services Concentration

Required Courses for this concentration:

PS 3310 - Culture and the Practice of Psychology

This course is an effort to critique the practice of psychotherapy, counseling, psychology research, and applied psychology through the lens of culture. From this critique, students will be given tools to develop sensibilities reflecting a commitment to grow in their understanding of diversity. Concepts such as race, ethnicity, gender, sex, sexual orientation, age, religion, mental and physical abilities, socio-economics, profession, spirituality, and a host of other ideas will serve as touchstones for discussion and learning. Students will learn to think critically about themselves, their learning process, asking questions and research, and the prospects for making

change in this world as well as examine assumptions that underpin the professions and practices of psychology. This course will branch into a myriad of other topics and fields to illustrate its points. Students will participate in active discussions and learn to work the ideas from the course into personal learning.

*Prerequisites: PS 1110 and sophomore standing.
every Fall (4 Credits)*

PS 3160 - Child Psychology

Everyone has been exposed to a "normal" child and a child who does not appear to fall into the "normal" category. This course takes an in-depth look at both normal and abnormal child development from conception through adolescence. We will examine milestones and implications of not meeting those milestones when anticipated. The course will cover topics of physical, social, psychological, emotional, moral and cognitive development as well as family and educational structures. Disorders of childhood (biological as well as psychological), learning differences, social/cultural and socio-economic status will also be explored at length. Prerequisites: PS 2160 *every Spring (4 Credits)*

PS 3750 - Non-Profit Organizations & Community Mental Health

In addition to speakers coming to class to discuss their experiences in the field, these classes typically visit local sites where students will be able to see the day-to-day workings of a variety of non-profit and community mental health agencies.

*Prerequisites: Junior standing
Every Fall (4 Credits)*

PS 4320 - Fundamentals of Counseling and Therapy

This course involves an in-depth examination of the various approaches to the process of counseling and psychotherapy applied to a variety of life conflicts. Included are the accepted theoretical approaches to counseling and therapy as well as the specific skills of communication, listening and empathy.

*Prerequisites: PS 1110 and PS 3210
every Spring (4 Credits)*

Minor

Psychology Minor

Requirements

(24 Credits)

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

- Four additional courses totaling 20 credits, two of which must be 3000+ level.

Other Programs

Psychology General Concentration Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

First Year

Fall

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and

writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to

think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (2 Credits)

- Elective

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. (4 Credits)

- PS 2000 + Elective (4 credits)

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

PS 2110 - Writing & Research in Psychology

Building on the specific content from 'Introduction to Psychology' this course presents various ways psychologists approach this uniquely human science. This course takes a long historical view of the development of psychological types of thinking. It also discusses how social scientists engage in research with special attention to the scientific method. Students will learn to think critically about psychology research and culturally situate many of the attitudes and assumptions of psychology. *every semester (4 Credits)*

PS 2050 - Social Psychology

An examination of the way the individual's behavior is affected by the behavior of others. Areas covered include aggression, conformity, attitude formation, methods of persuasion, altruism, environmental effects on behavior, prejudice and discrimination, and interpersonal attraction. This course satisfies the LAS 4 Social Sciences requirement. *Offered every fall. (4 Credits)*

- Elective

Spring

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

- PS 2000 + elective (4credits)
- Elective

Third Year

Fall

PS 4220 - Research Methods

This seminar course involves an examination of the various research strategies used by psychologists and other social scientists. The advantages and disadvantages of each methodology are analyzed. Control, experimental and alternative designs, context, and standards for ethical research are discussed. A research project constitutes a major feature of the course. Students generate, conduct, write up, and present an original APA style research study. *Prerequisites: PS 1110 or SO 1110, and PS 2310 or MT 2310 and one PS or SO 3000-level course. Offered every fall. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

PS 3210 - Abnormal Psychology

This course focuses on the causes, symptoms, definition, and treatments of psychological disorders. Emphasis is on the more serious forms of psychopathology. The complexities involved in judging normalcy (i.e. the forensic vs. clinical model); the correlation between delinquency and mental illness, deinstitutionalization, and the rights of the mentally ill are also studied. Prerequisites: PS 1110 and 45 Credits *every Fall (4 Credits)*

- Send ' Intent to Graduate' to Registrar

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple

perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history,

political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

Sociology

Social Work

The Social Work minor prepares students to work and contribute to an increasingly complex world. Student engage in community, internships and field practica in service and advocacy with a variety of organizations (like Lutheran Social Services, the Sierra Club, the Rape and Domestic

Violence Crisis Center, NARAL- NH, the Concord Day Resource Center, NH Peace Action, NH Citizens Alliance, American Friends Service Committee, DCYF, the Bradford School, NH Red Cross, Farmsteads of New Hampshire, and Families in Transition).

Learning Outcomes

Student minoring in social work will the ability to:

- apply a sociological perspective to work they do with people and professionals.
- demonstrate a broad knowledge of US and global social problems and the public and private initiatives aimed at addressing them.
- critically assess the accuracy, validity and credibility of information on U.S. and global social issues.
- clearly articulate the personal and professional strengths (attributes, skills, knowledge) they bring to the job market, and describe several (at least 3) specific employment options that they can pursue, given their background in sociology and their personal values and interests.
- advocate clearly and professionally in their communication.

Social Work Minor

- Description and Learning Outcomes

Required Courses

(20 Credits)

SW 1110 - Introduction to Social Work

This course affords students the opportunity to develop an understanding of the social work profession. The many facets of social work - theory, methods, and fields of practice - will be examined. *(4 Credits)*

PS 4320 - Fundamentals of Counseling and Therapy

This course involves an in-depth examination of the various approaches to the process of

counseling and psychotherapy applied to a variety of life conflicts. Included are the accepted theoretical approaches to counseling and therapy as well as the specific skills of communication, listening and empathy.

*Prerequisites: PS 1110 and PS 3210
every Spring (4 Credits)*

PS 3750 - Non-Profit Organizations & Community Mental Health

In addition to speakers coming to class to discuss their experiences in the field, these classes typically visit local sites where students will be able to see the day-to-day workings of a variety of non-profit and community mental health agencies.

*Prerequisites: Junior standing
Every Fall (4 Credits)*

PS 4500 - Social Advocacy and Action

Social advocacy is about developing an informed position on a public issue and actively working to build support for this position among others who are opposed to it or unclear about where they stand. The advocate not only believes in a position, but makes a concerted public effort to insure that it prevails over competing perspectives when funds are allocated, policies are established, or other actions taken. In this course we will explore various forms of individual and collective advocacy used to advance a certain position on a social issue and ask: Why, and under what conditions, have some been effective and others not? What makes for an effective advocate?

*Prerequisites: PS 2050 and 45 Credits
(4 Credits) (Not open to students who have taken SO 4500)*

And 2 of the following:

SO 2040 - U.S. Social Problems

The U.S. faces many challenging social problems, including economic insecurity and poverty, family and school violence, spiraling health care costs, racial and religious intolerance/discrimination, environmental degradation, substance abuse and addiction, homelessness, and so on. In this course, students will learn about the causes and human consequences of these and other problems through readings, films, guest speakers, web-based

research and visits to various community sites. Equally important, the class will explore public and private initiatives that are attempting to address these problems. Students will be encouraged to reflect on some of the ways they can help ameliorate the problems that they care about the most. *(4 Credits)*

SO 2220 - Global Social Problems

This course explores pressing global problems like poverty, war, discrimination against women, human trafficking, political repression, human rights violations, refugee resettlement, terrorism, and global warming, deforestation and other environmental challenges. Readings, films and guest speakers from or working in solidarity with the people of countries around the world will help students understand these problems, learn about some of the many organizations and agencies that are working on them, and gain insight into the diverse job opportunities there are in international development, human rights advocacy, conflict mediation, and related fields. *(4 Credits) Not open to students who have taken SO 3040.*

PO 2110 - State and Local Government and Politics

The organization, structure, and functions of state governments and of municipal, county, town, and other local governments of the United States is examined. *(4 Credits)*

Social Sciences

An Associate Degree in the Social Sciences is designed to facilitate a multi-disciplinary understanding of human interaction in society. Central to all of the disciplines listed in this degree is the notion of interpersonal as well as group relations; as a result students seeking the Associate Degree in Social Sciences will be better prepared to think about social change. Depending on the specific course of study used to complete this degree, students may be prepared for entry level positions or continued study.

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule to meet individual interests and goals.

Major

Social Sciences, A.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Twelve Credits

Twelve Credits, provided that these twelve credits do not also count for discipline specific requirements, to taken from the following list:

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes

community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

- LAS 2130

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (*4 Credits*)

MT 1020 - College Algebra

This course is designed for students who need additional preparation for MT 1510 (Pre-calculus). The course will focus on the application of algebra to real world problems including introductory algebra topics such as: factoring polynomials, solving quadratic equations, graphing linear, quadratic, and other polynomial functions, rational functions, and solving systems of equations. Emphasis will be on conceptual understanding, learning in context, and solving real world problems using graphical, symbolic, and numeric representations. This course satisfies the Quantitative Literacy requirement *Offered every semester (4 Credits)*

24 additional credits

24 additional credits, selected from the following disciplines:

- Business Administration
- Criminal Justice
- Economics
- Education
- Kinesiology
- Political Science
- Psychology
- Outdoor Education

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Sport and Recreation Management

The Program prepares students for careers in managing organizations in the sport, recreation, and leisure industries. By developing professional knowledge and skills, as well as critical thinking skills, our students are prepared for significant career flexibility. The blending of business and kinesiology courses is designed to prepare students to work in a broad array of management positions (in both non-profits and for-profits). At New England College, the discipline covers the study of management theories, leadership, financial management, marketing and sponsorships, the sociology of sport, recreation facilities management, legal issues and risk management, and professionalism in the industry. In consultation with the faculty advisor, students will further select courses within the major and across disciplines to satisfy personal interests and strengths.

Experiential Learning in Sport and Recreation Management

Students have many opportunities to engage in a vast array of experiential learning. The Sport and Recreation Management major has experiential learning components in every course. (Also, the major requires an internship or a practicum experience that is designed for and contracted with each student.) Experiential learning based on theoretical and substantive knowledge allows our students to engage fully in the discipline. The major is designed with intentional experiences that the professor must guide and lead the students into and through, using a variety of

pedagogical principles and practices. As professors facilitate the activities, the students use the concepts, techniques, and requisite social skills toward the expected goals and outcomes-to achieve success... and sometimes failure, from which we guide into a learning experience. The experiential component of the Program engages the students to learn and accept responsibility for their educational goals, to seek learning, and become personally and socially responsible professionals.

Learning Outcomes

Students completing the Sport and Recreation Management program should be able to:

- Identify and analyze the socio-cultural dimensions related to sport & recreation
- Demonstrate knowledge of management & leadership theories
- Develop an understanding of ethics perspectives and theories and demonstrate competencies in applying ethical decision-making strategies
- Demonstrate knowledge and apply marketing-related concepts & theories
- Develop skills to demonstrate the application of essential budgeting & financial techniques and principles
- Demonstrate working knowledge of legal issues specific to the industry
- Analyze sport using relevant economic theories
- Examine and analyze issues related to governance in varying sport organizations and among governing bodies which influence the sport industry
- Undertake field experience in Sport and Recreation Management (internship and/or practicum)
- Write persuasively
- Use qualitative and quantitative data for decision making
- Exhibit strong oral and interpersonal communication skills
- Read critically
- Think critically and independently

Sport and Recreation Management, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(44 Credits)

Core Requirements

SM 1510 (KI 1510) - Introduction to Sport and Recreation Management

This introductory-level course is an overview of the theoretical disciplines and professions in sport and recreation management. Using lecture and discussion following a course text, students also will engage in in-class and out of- class projects covering the diverse areas of the non-profit and for-profit sport industries. The course will survey: the history of modern U.S. sport; introduction to management, supervision, and leadership theories; legal aspects of sport and recreation including negligence, contracts, and risk management; sport in society; recreation facilities management; the NCAA and collegiate administration; marketing and services; accounting and budgeting; sport psychology; and more. (Students majoring in Sport and Recreation Management should take this course during the first year.) *Offered every semester. (4 Credits)*

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards.

This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

SM 2750 (KI 2750) - Organization and Administration of Sport & Recreation

This sophomore-level course is designed to provide the student with an overview of theoretical and practical components of administration in various sport and recreation venues. Utilizing a course text, current research, class discussion, guest speakers, and numerous hands-on projects, the students will analyze organizations (including interscholastic and intercollegiate programs, conferences, and other sport groups) and methods and theories of administration and budgeting. Student projects include: budget development & presentations, games management for a New England College athletic contest, administration of an NEC Homecoming event, sponsoring an intramural event for Rec. Sports, planning and organizing a pep rally for NEC Athletics, and debates. *Prerequisites: SM 1510 or KI 1110. Offered every year. (4 Credits)*

SM 3120 (KI 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence; politics; economics; gender, race and ethnicity; deviance; and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper-level and writing intensive course is offered as an LAS 7 in the LAS curriculum,

meeting both the outcomes of the departments of Sport & Recreation Management and Kinesiology, as well as those of the LAS. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

SM 3540 (BU 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and non-profit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally, students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites: BU 2510 Offered every fall. (4 Credits)*

SM 3710 (BU 3710) - Recreation Facilities Management

This course is designed to prepare students to plan, design, and manage sport and recreation facilities. The class members tour numerous facilities on field trips to large and small, for-profit and non-profit facilities including prep schools, colleges/universities, YMCAs, ice arenas, summer camps, private fitness facilities, municipal facilities and playgrounds, and specialized venues (such as curling and rock climbing). Students will study and discuss client needs and the theories involved in planning, constructing, and managing facilities. Throughout the course, consideration is given to the ADA (Americans with Disabilities Act) guidelines, and "green" environmentally-sound construction practices and materials incorporating LEED Certification (Leadership in Energy and Environmental Design) standards. Throughout the semester, each student will make several presentations based on research of facility needs, construction, and equipment and furnishings. The course will culminate with the presentation of a group project which will reflect a foundation and expanse of knowledge in the field. *Prerequisites: SM 1510/KI 1510 or BU 1110, BU 2220, and BU 2510; 60 credits. Offered every fall. (4 Credits)*

SM 3720 - Event Management

Event management is a form of marketing promotion activity where the organization and its brand are linked to a themed activity that the target audience experiences. The class members will create, market, and sponsor an activity for an off-campus or on campus event; the event will

be reviewed from the initial idea, to the development of a plan, to the execution and evaluation of the activity. Students also will learn to use fundraising techniques, manage volunteers, and write press releases. *Prerequisites: BU 2510 & 60 credits, or permission of instructor. Offered every year. (2 Credits)*

SM 3730 - Sport Finance

This course provides an analysis of financial concepts and theories and their application in the professional, intercollegiate, and commercial sport industries. Topics include revenues and expenses of professional, intercollegiate, non-profit community and for-profit sport industries. The course will examine the drivers of these revenues and expenses, budgeting methods, economic impact, fundraising, ownership in sport, and public and private funding for non-profit sport programs. *Prerequisites: BU 2220. (4 Credits)*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

SM 4950 - Senior Seminar in Sport and Recreation Management: Issues in Professional Practice

Senior Seminar serves as the capstone course for the major. The course will bring together all previous coursework in preparing students for a career in the profession. Issues in professional practice will be covered through a variety of assignments: essays and discussion, a daily review of "current events" topics pertinent to the profession, a major research paper and presentation to the College community, and a group project and in-class evaluation (recently ranging from

leading on-campus projects, to participating as a focus group for Danforth Library's online products). Additionally, the Seminar will engage students in the various job search techniques: all students will write a resume, a list of references, and several letters of application; students will locate job sources, develop interview skills and engage in mock interviews, and practice professional preparation and presentation. *Prerequisites: 90 credits. (4 Credits)*

Choose either:

SM 4920 - Practicum in Sport and Recreation Management

This practical experience is designed to offer insight and experiential learning in a student's area of interest, or to broaden a student's understanding and exposure to various settings related to sport and recreation management. Students actively participate and assist in determining the placement setting, which may include: management of recreation and intramural programs, coaching, fitness center programming & management, facility management, event management, or numerous other related areas. Students taking this course will engage in hands-on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the sport and recreation management major enroll in the first field experience in the sophomore year. *Prerequisites: SM 1510, and permission of faculty supervisor. Variable credit (1-4) May be repeated for credit with varying site experiences.*

SM 4910 - Internship in Sport and Recreation Management

Qualified students apply knowledge and theories gained in class in their internship setting. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of a Sport and Recreation Management faculty member. *With permission of faculty member. Contract required. Variable credit (1-16)*

Required Electives

One Course from the following Electives

(Sport and Recreation Management majors should consult with their faculty academic advisor to select the course depending on individual career goals and interests)

- SM 2310 - Psychology of Sport and Movement

KI 2020 - Cardiopulmonary Resuscitation (CPR) for the Professional Rescuer

This required core course for kinesiology majors provides instruction and practice in the American Red Cross procedures for cardiopulmonary resuscitation. Topics include prevention, treatment, and recognition of injuries, as well as dealing with cardiovascular and respiratory emergencies and notifying EMT. Instruction and practical training in the use of the AED will be included. Practical hands-on work is required in the course, as well as both a written and practical exam to earn Red Cross Certification. *Offered every year. (1 Credit)*

SM 3550 - Sport and Adventure Tourism

This course introduces the student to one segment of sport, recreation, and leisure that accounts for more than a billion dollars annually in the sport/recreation/leisure industries. In particular, this course is designed for sport & recreation majors, business majors, or kinesiology majors interested in exploring this exciting industry segment. Various areas within sport tourism will be analyzed including economics, society and culture, marketing, sport competition, event management, risk management and liability, and eco-tourism and the environment, as well as an historical overview of sport tourism. *Prerequisites: SM 1510/KI 1510 and 30 credits. (4 Credits)*

SM 3610 (KI/OE 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out. *Prerequisites: OE 1110 or SM 1510 or KI 1110. Minimum of 30 credits. (4 Credits)*

SM 3990 - Topics in Sport and Recreation Management

A changing selection of courses designed to offer a variety of enrichment studies in Sport and Recreation Management. Recent topics courses offered have included: *Risk Management Strategies; Advanced Coaching Seminar: Management & Leadership; Sport Literature; The "Greening" of Sport; The Ancient Olympics. Variable Credit (1-4) Since topics change, the course may be repeated for credit for different topics.*

SM 4810 - Directed Study in Sport and Recreation Management

This is a course of study to be arranged between faculty and student in the field of Sport and Recreation Management. *Contract required. Variable Credit (1-4) May be repeated for credit for different topics.*

SM 4830 - Independent Study in Sport and Recreation Management

This study allows for advanced, independent study of a selected topic arranged with a faculty member. *Contract required. Variable Credit (1-4)*

SM 4910 - Internship in Sport and Recreation Management

Qualified students apply knowledge and theories gained in class in their internship setting. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of a Sport and Recreation Management faculty member. *With permission of faculty member. Contract required. Variable credit (1-16)*

Plus 20 credits from the following:

(See suggested *Recommended Course Groupings* below to assist in selecting appropriate courses.)

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of

wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness.

Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites: KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)*

KI 3720 - Coaching Education Seminar

Coaching certification is a crucial issue in today's sport education arena. This course will provide a comprehensive training for students interested in coaching from the youth to college levels. The content will focus on multiple aspects of coaching including physical training, sport psychology, risk management and legal liabilities, administrative roles within coaching, teaching technical and tactical skills, and ethics related to coaching. The required materials cover coaching competencies included in national certification coaching programs, such as the "American Sport Education Program" (ASEP). *Prerequisites: Minimum of 30 credits earned. Offered every other fall. (4 Credits)*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 3610 (OE 3610/SM 3610) - Theory of Outdoor Education

This course examines the theoretical basis of experiential and outdoor education and the educational, psychological, and historical underpinnings. Emphasis is given to each student's philosophical development of leadership and education. The philosophies of outdoor education programs and leaders are researched and discussed in this course. This course is considered to be a writing intensive course and students will work on researching and processing of foundations. Students will participate in one extensive group experience. Successful completion of this course prepares students to design and lead experiential education activities both indoors and out. *Prerequisites: OE 1110 or KI 1110 or SM 1510, Minimum of 30 credits earned. (4 Credits)*

SM 3120 (KI 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence; politics; economics; gender, race and ethnicity; deviance; and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper-level and writing intensive course is offered as an LAS 7 in the LAS curriculum, meeting both the outcomes of the departments of Sport & Recreation Management and Kinesiology, as well as those of the LAS. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

SM 3540 (BU 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and non-profit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally, students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites: BU 2510 Offered every fall. (4 Credits)*

SM 3550 - Sport and Adventure Tourism

This course introduces the student to one segment of sport, recreation, and leisure that accounts for more than a billion dollars annually in the sport/recreation/leisure industries. In particular, this course is designed for sport & recreation majors, business majors, or kinesiology majors interested in exploring this exciting industry segment. Various areas within sport tourism will be analyzed including economics, society and culture, marketing, sport competition, event management, risk management and liability, and eco-tourism and the environment, as well as an historical overview of sport tourism. *Prerequisites: SM 1510/KI 1510 and 30 credits. (4 Credits)*

SM 3710 (BU 3710) - Recreation Facilities Management

This course is designed to prepare students to plan, design, and manage sport and recreation facilities. The class members tour numerous facilities on field trips to large and small, for-profit and non-profit facilities including prep schools, colleges/universities, YMCAs, ice arenas, summer camps, private fitness facilities, municipal facilities and playgrounds, and specialized venues (such as curling and rock climbing). Students will study and discuss client needs and the theories involved in planning, constructing, and managing facilities. Throughout the course, consideration is given to the ADA (Americans with Disabilities Act) guidelines, and "green" environmentally-sound construction practices and materials incorporating LEED Certification (Leadership in Energy and Environmental Design) standards. Throughout the semester, each student will make several presentations based on research of facility needs, construction, and equipment and furnishings. The course will culminate with the presentation of a group project which will reflect a foundation and expanse of knowledge in the field. *Prerequisites: SM 1510/KI 1510 or BU 1110, BU 2220, and BU 2510; 60 credits. Offered every fall. (4 Credits)*

SM 3720 - Event Management

Event management is a form of marketing promotion activity where the organization and its brand are linked to a themed activity that the target audience experiences. The class members will create, market, and sponsor an activity for an off-campus or on campus event; the event will be reviewed from the initial idea, to the development of a plan, to the execution and evaluation of the activity. Students also will learn to use fundraising techniques, manage volunteers, and write press releases. *Prerequisites: BU 2510 & 60 credits, or permission of instructor. Offered every year. (2 Credits)*

SM 3730 - Sport Finance

This course provides an analysis of financial concepts and theories and their application in the professional, intercollegiate, and commercial sport industries. Topics include revenues and expenses of professional, intercollegiate, non-profit community and for-profit sport industries. The course will examine the drivers of these revenues and expenses, budgeting methods, economic impact, fundraising, ownership in sport, and public and private funding for non-profit sport programs. *Prerequisites: BU 2220. (4 Credits)*

SM 3990 - Topics in Sport and Recreation Management

A changing selection of courses designed to offer a variety of enrichment studies in Sport and Recreation Management. Recent topics courses offered have included: *Risk Management Strategies; Advanced Coaching Seminar: Management & Leadership; Sport Literature; The "Greening" of Sport; The Ancient Olympics. Variable Credit (1-4) Since topics change, the course may be repeated for credit for different topics.*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class

members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

SM 4910 - Internship in Sport and Recreation Management

Qualified students apply knowledge and theories gained in class in their internship setting. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of a Sport and Recreation Management faculty member. *With permission of faculty member. Contract required. Variable credit (1-16)*

SM 4920 - Practicum in Sport and Recreation Management

This practical experience is designed to offer insight and experiential learning in a student's area of interest, or to broaden a student's understanding and exposure to various settings related to sport and recreation management. Students actively participate and assist in determining the placement setting, which may include: management of recreation and intramural programs, coaching, fitness center programming & management, facility management, event management, or numerous other related areas. Students taking this course will engage in hands-on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the sport and recreation management major enroll in the first field experience in the sophomore year. *Prerequisites: SM 1510, and permission of faculty supervisor. Variable credit (1-4) May be repeated for credit with varying site experiences.*

Recommended Course Groupings:

Emphasis on Sport Marketing

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

SM 3540 (BU 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and non-profit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally, students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites: BU 2510 Offered every fall. (4 Credits)*

SM 3550 - Sport and Adventure Tourism

This course introduces the student to one segment of sport, recreation, and leisure that accounts for more than a billion dollars annually in the sport/recreation/leisure industries. In particular, this course is designed for sport & recreation majors, business majors, or kinesiology majors interested in exploring this exciting industry segment. Various areas within sport tourism will be analyzed including economics, society and culture, marketing, sport competition, event management, risk management and liability, and eco-tourism and the environment, as well as an historical overview of sport tourism. *Prerequisites: SM 1510/KI 1510 and 30 credits. (4 Credits)*

SM 3720 - Event Management

Event management is a form of marketing promotion activity where the organization and its brand are linked to a themed activity that the target audience experiences. The class members will create, market, and sponsor an activity for an off-campus or on campus event; the event will be reviewed from the initial idea, to the development of a plan, to the execution and evaluation of the activity. Students also will learn to use fundraising techniques, manage volunteers, and write press releases. *Prerequisites: BU 2510 & 60 credits, or permission of instructor. Offered every year. (2 Credits)*

Emphasis on Coaching

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 3720 - Coaching Education Seminar

Coaching certification is a crucial issue in today's sport education arena. This course will provide a comprehensive training for students interested in coaching from the youth to college levels. The content will focus on multiple aspects of coaching including physical training, sport psychology, risk management and legal liabilities, administrative roles within coaching, teaching

technical and tactical skills, and ethics related to coaching. The required materials cover coaching competencies included in national certification coaching programs, such as the "American Sport Education Program" (ASEP). *Prerequisites: Minimum of 30 credits earned. Offered every other fall. (4 Credits)*

SM 2130 (PS 2230/KI 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: 30 credits. Offered every spring. (4 Credits)*

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

Emphasis on Facility Management

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and

generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (*4 Credits*)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (*4 Credits*)

SM 3720 - Event Management

Event management is a form of marketing promotion activity where the organization and its brand are linked to a themed activity that the target audience experiences. The class members will create, market, and sponsor an activity for an off-campus or on campus event; the event will be reviewed from the initial idea, to the development of a plan, to the execution and evaluation of the activity. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites:* 60 credits. *Offered every year. (4 Credits)*

Other Programs

Sport and Recreation Management Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-

assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

SM 1510 (KI 1510) - Introduction to Sport and Recreation Management

This introductory-level course is an overview of the theoretical disciplines and professions in sport and recreation management. Using lecture and discussion following a course text, students also will engage in in-class and out of- class projects covering the diverse areas of the non-profit and for-profit sport industries. The course will survey: the history of modern U.S. sport; introduction to management, supervision, and leadership theories; legal aspects of sport and recreation including negligence, contracts, and risk management; sport in society; recreation

facilities management; the NCAA and collegiate administration; marketing and services; accounting and budgeting; sport psychology; and more. (Students majoring in Sport and Recreation Management should take this course during the first year.) *Offered every semester. (4 Credits)*

- Elective

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

SM 1510 (KI 1510) - Introduction to Sport and Recreation Management

This introductory-level course is an overview of the theoretical disciplines and professions in sport and recreation management. Using lecture and discussion following a course text, students also will engage in in-class and out of- class projects covering the diverse areas of the non-profit and for-profit sport industries. The course will survey: the history of modern U.S. sport; introduction to management, supervision, and leadership theories; legal aspects of sport and recreation including negligence, contracts, and risk management; sport in society; recreation facilities management; the NCAA and collegiate administration; marketing and services; accounting and budgeting; sport psychology; and more. (Students majoring in Sport and Recreation Management should take this course during the first year.) *Offered every semester. (4 Credits)*

- Elective
- Elective
- Elective

Second Year

Fall

SM 2750 (KI 2750) - Organization and Administration of Sport & Recreation

This sophomore-level course is designed to provide the student with an overview of theoretical and practical components of administration in various sport and recreation venues. Utilizing a course text, current research, class discussion, guest speakers, and numerous hands-on projects, the students will analyze organizations (including interscholastic and intercollegiate programs, conferences, and other sport groups) and methods and theories of administration and budgeting. Student projects include: budget development & presentations, games management for a New England College athletic contest, administration of an NEC Homecoming event, sponsoring an intramural event for Rec. Sports, planning and organizing a pep rally for NEC Athletics, and debates. *Prerequisites: SM 1510 or KI 1110. Offered every year. (4 Credits)*

- Quantitative Literacy Requirement

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. *(4 Credits)*

Spring

- Elective

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

- Elective

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

Third Year

Fall

SM 3540 (BU 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and non-profit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally,

students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites: BU 2510 Offered every fall. (4 Credits)*

SM 3120 (KI 3120) - Sport in the Global Society

This course explores the ways in which sport both reflects and shapes culture around the world. It examines the extent to which sport reinforces and/or resists dominant values in the United States and in other countries around the globe. In this course, students will examine the history of modern sport, as well as social theories used to analyze sport in its broadest context. Students will analyze the connections and challenges surrounding sport at various levels, including youth, interscholastic, intercollegiate, professional, and international. Specific sub topics will include the relationship of sport to violence; politics; economics; gender, race and ethnicity; deviance; and media relations. The overall goal is to assist students in a cultural and social analysis of sport, and to illustrate how sport and society both influence and challenge human conditions. This upper-level and writing intensive course is offered as an LAS 7 in the LAS curriculum, meeting both the outcomes of the departments of Sport & Recreation Management and Kinesiology, as well as those of the LAS. *Prerequisites: 60 credits. Spring

SM 4710 (KI 4710) - Legal Issues in Sport and Recreation

This course will familiarize students with basic legal concepts and relevant legal issues

pertaining to athletics, sports, physical education, outdoor education, recreation, and leisure activities. Through text and case law readings, lecture, and discussion the course will focus on negligence within activity itself and with equipment, facilities, supervision, and employees, with the ultimate objective of minimizing and managing legal risks within the industry. Additionally, diverse legal issues will be covered such as contracts, business structures, standards of practice, arbitration and mediation, criminal behavior, emergency care, products liability, and more. Class members also take a field trip to a large event (usually the Boston Marathon) to identify the numerous legal issues involved at such an event. *Prerequisites: 60 credits. Offered every year. (4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

4th Year

Fall

SM 3710 (BU 3710) - Recreation Facilities Management

This course is designed to prepare students to plan, design, and manage sport and recreation facilities. The class members tour numerous facilities on field trips to large and small, for-profit and non-profit facilities including prep schools, colleges/universities, YMCAs, ice arenas,

summer camps, private fitness facilities, municipal facilities and playgrounds, and specialized venues (such as curling and rock climbing). Students will study and discuss client needs and the theories involved in planning, constructing, and managing facilities. Throughout the course, consideration is given to the ADA (Americans with Disabilities Act) guidelines, and "green" environmentally-sound construction practices and materials incorporating LEED Certification (Leadership in Energy and Environmental Design) standards. Throughout the semester, each student will make several presentations based on research of facility needs, construction, and equipment and furnishings. The course will culminate with the presentation of a group project which will reflect a foundation and expanse of knowledge in the field. *Prerequisites: SM 1510/KI 1510 or BU 1110, BU 2220, and BU 2510; 60 credits. Offered every fall. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

SM 4920 - Practicum in Sport and Recreation Management

This practical experience is designed to offer insight and experiential learning in a student's area of interest, or to broaden a student's understanding and exposure to various settings related to sport and recreation management. Students actively participate and assist in determining the placement setting, which may include: management of recreation and intramural programs, coaching, fitness center programming & management, facility management, event management, or numerous other related areas. Students taking this course will engage in hands-on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the sport and recreation management major enroll in the first field experience in the sophomore year. *Prerequisites: SM 1510, and permission of faculty supervisor. Variable credit (1-4) May be repeated for credit with varying site experiences.*

SM 4910 - Internship in Sport and Recreation Management

Qualified students apply knowledge and theories gained in class in their internship setting. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of a Sport and Recreation Management faculty member. *With permission of faculty member. Contract required. Variable credit (1-16)*

- Elective

Spring

SM 4950 - Senior Seminar in Sport and Recreation Management: Issues in Professional Practice

Senior Seminar serves as the capstone course for the major. The course will bring together all previous coursework in preparing students for a career in the profession. Issues in professional practice will be covered through a variety of assignments: essays and discussion, a daily review of "current events" topics pertinent to the profession, a major research paper and presentation to the College community, and a group project and in-class evaluation (recently ranging from leading on-campus projects, to participating as a focus group for Danforth Library's online products). Additionally, the Seminar will engage students in the various job search techniques: all students will write a resume, a list of references, and several letters of application; students will locate job sources, develop interview skills and engage in mock interviews, and practice professional preparation and presentation. *Prerequisites: 90 credits. (4 Credits)*

SM 3730 - Sport Finance

This course provides an analysis of financial concepts and theories and their application in the professional, intercollegiate, and commercial sport industries. Topics include revenues and expenses of professional, intercollegiate, non-profit community and for-profit sport industries. The course will examine the drivers of these revenues and expenses, budgeting methods, economic impact, fundraising, ownership in sport, and public and private funding for non-profit sport programs. *Prerequisites: BU 2220. (4 Credits)*

- Elective

SM 4920 - Practicum in Sport and Recreation Management

This practical experience is designed to offer insight and experiential learning in a student's area of interest, or to broaden a student's understanding and exposure to various settings related to sport and recreation management. Students actively participate and assist in determining the placement setting, which may include: management of recreation and intramural programs, coaching, fitness center programming & management, facility management, event management, or numerous other related areas. Students taking this course will engage in hands-on experiences supervised by a professional in the specific area of expertise, will establish personal learning objectives for the experience, will reflect and self-assess on demonstrated skill development and the transferability of learned skills and concepts to future experiences. Students will work closely with the advisor and/or field experience faculty supervisor to determine an appropriate experiential opportunity which is consistent with the student's goals and interests. It is strongly recommended that the sport and recreation management major enroll in the first field experience in the sophomore year. *Prerequisites: SM 1510, and permission of faculty supervisor. Variable credit (1-4) May be repeated for credit with varying site experiences.*

SM 4910 - Internship in Sport and Recreation Management

Qualified students apply knowledge and theories gained in class in their internship setting. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of a Sport and Recreation Management faculty member. *With permission of faculty member. Contract required. Variable credit (1-16)*

Note:

A practicum (SM 4920) or internship (SM 4910) is required for the major. Students are encouraged to discuss their options with an SRM faculty member during the sophomore year; internships are available during the junior and senior years, as well as in the summer terms between junior and senior years.

Theatre

The major in theatre is designed to provide students with a solid foundation in the craft and art of theatre through both theoretical and practical principles. The philosophy of the Theatre Department stresses the relationship between a liberal arts education and possible career paths in the theatre or further studies in graduate programs. The fall and spring Mainstage Theatre productions are linked to the College's curriculum, providing a learning laboratory in which students have the opportunity to explore educational themes while producing high caliber theatre performances. During the summer, The Open Door Theatre offers students the opportunity for a six-week professional theatre immersion experience. Working as interns with the resident professional company, 3rd year students take master classes as well as perform technical crew work for that summer's production.

Learning Outcomes

Students completing the Theatre program should be able to:

- Apply the basic analytical, physical, and vocal techniques utilized in the process of acting.
- Apply the basic terminology and craft skills utilized by the stage technician (scenery, costumes, lighting).
- Describe the analytical and visual principles of theatrical design.
- Apply the basic analytical, staging, blocking, organizational and communication techniques utilized in the process of directing.
- Write creatively and critically for the theatre.
- Analyze, interpret, and evaluate their own and others' work in the theatre.
- Describe theatre in relation to history and culture.
- Critically read and interpret theoretical and dramatic texts.
- Apply the collaborative and creative process through which a script is transformed into a theatrical production.

Experiential Learning Component

Theatre by its very nature is experiential. Critical to developing the skills necessary to pursue a career in the theatre students must engage not simply in theoretical classroom exercises but in practical production experiences. To that end, students will actively participate in some fashion in all mainstage productions (4 each year) by the theatre department (as actors, stage managers, crew or front of house staff). In addition students are provided additional production experiences with the student run Carriage Theatre Ensemble, which produces two or more works every year. CTE also provides students the opportunity to direct and design in addition to other acting and crew assignments.

After the spring of their junior year (upon completion of 60 credits), students will participate in a summer immersion experience with The Open Door Theatre, our resident professional summer theatre company. In addition to master classes, students will participate in rehearsals and perform technical crew assignments for the company's production. Students will also produce their own showcase, which will be critiqued and evaluated by members of The Open Door Company. This experience will give students their first truly professional experience outside of the theatre department.

Major

Theatre, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(46 Credits)

Theatre Core Courses

(4 credits unless otherwise indicated)

TH 1310 - Seminar in Technical Theatre: Scenery

A concentrated course on the planning, methodology and construction of scenery for the theatre. Specific areas of study will include reading and interpreting shop drawings, basic woodworking tool use, and fundamental techniques of scenery construction. Practical application through crew work on departmental productions is stressed and required. *Offered during the first seven weeks of every fall. (2 Credits)*

TH 1320 - Seminar in Technical Theatre: Stage Lighting

A concentrated course on modern stage lighting principles and practice. Specific areas of study include electrical theory and safety, stage lighting instruments, and distribution control. Practical application through crew work on departmental productions is stressed and required. *Offered during the second seven weeks of every fall. (2 Credits)*

TH 1211 - Acting One - For Majors and Minors

This course is designed for the student who has a background in Acting. Emphasis is placed on taking this student deeper into the realm of playing which is at the heart of all acting. Students will participate in acting exercises, improvisation, monologues and scene study. *Offered during the first seven weeks of every spring. (2 Credits)*

TH 1220 - Production Management

Designed to provide students with a basic understanding of the process of theatrical production from conception to execution and evaluation. Particular emphasis is placed on the hierarchy and careers of the theatre, the process of designers, directors and actors and more detailed experience with the elements of stage management. *Offered during the second seven weeks of every spring. (2 Credits)*

TH 2210 - Character Development

An acting course that emphasizes character development through role and scene analysis. Particular emphasis is placed on the scoring of the role using a variety of exercises and journal work. *Prerequisites: TH 1210 or TH 1211. Offered the first seven weeks every fall. (2 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 2230 - Movement for the Performer

A theatrically-oriented dance course for the performer. This course explores alternative

movement forms through the use of music, masks, properties and furniture. Students participate in exercises and develop presentations in an effort to experience varying and innovative techniques through which the performer can communicate. *Offered every fall. (4 Credits)*

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production from conception to execution and analysis. This course focuses on the Theatre Department Main stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

TH 3240 - Directing

The goal of this course is to develop and discover an understanding of the responsibilities, resources and process of the theatrical artist known as the director through lecture, discussion and class exercise. This hands-on creative approach will explore the journey of the director from casting to production through exercises and scene work. *Offered every spring. (4 Credits)*

TH 3320 - The Design Process

An exploration of the process of theatrical production design (scenery, lighting, and costumes). Specific areas of study include design history, theory, and script analysis. *Offered the first seven weeks of every spring. (2 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

TH 4210 - Advanced Acting

Focused studies of a range of acting forms and techniques. Courses may include: Oral Interpretation of Literature, Acting for Film and Video and Period Styles. *Prerequisites: TH 3210. Offered every spring. (2 Credits) May be repeated for credit with different topics.*

TH 4220 - Advanced Technical Seminar

Focused studies of a range of technical topics. Courses may include: Advanced Stage Lighting, Computer Aided Drafting for the Theatre. *Prerequisites: TH 1310 and TH 1320. Offered every spring. (2 Credits) May be repeated for credit with different topics.*

TH 4920 - Summer Professional Immersion Experience

Students will be fully involved in all aspects of a production of the Open Door Theatre. Students will work alongside and with a professional company and culminating course work will result in an acting showcase or technical portfolio to be critiqued by company members. *Offered every summer. 6 Credits.*

Other Programs

Theatre Program Suggested Course Sequence:

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

TH 1310 - Seminar in Technical Theatre: Scenery

A concentrated course on the planning, methodology and construction of scenery for the theatre. Specific areas of study will include reading and interpreting shop drawings, basic woodworking tool use, and fundamental techniques of scenery construction. Practical application through crew work on departmental productions is stressed and required. *Offered during the first seven weeks of every fall. (2 Credits)*

TH 1320 - Seminar in Technical Theatre: Stage Lighting

A concentrated course on modern stage lighting principles and practice. Specific areas of study include electrical theory and safety, stage lighting instruments, and distribution control. Practical application through crew work on departmental productions is stressed and required. *Offered during the second seven weeks of every fall. (2 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and

responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

TH 1211 - Acting One - For Majors and Minors

This course is designed for the student who has a background in Acting. Emphasis is placed on taking this student deeper into the realm of playing which is at the heart of all acting. Students will participate in acting exercises, improvisation, monologues and scene study. *Offered during the first seven weeks of every spring. (2 Credits)*

TH 1220 - Production Management

Designed to provide students with a basic understanding of the process of theatrical production from conception to execution and evaluation. Particular emphasis is placed on the hierarchy and careers of the theatre, the process of designers, directors and actors and more detailed experience with the elements of stage management. *Offered during the second seven weeks of every spring. (2 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Elective

Second Year

Fall

TH 2230 - Movement for the Performer

A theatrically-oriented dance course for the performer. This course explores alternative movement forms through the use of music, masks, properties and furniture. Students participate in exercises and develop presentations in an effort to experience varying and innovative techniques through which the performer can communicate. *Offered every fall. (4 Credits)*

TH 2210 - Character Development

An acting course that emphasizes character development through role and scene analysis. Particular emphasis is placed on the scoring of the role using a variety of exercises and journal work. *Prerequisites: TH 1210 or TH 1211. Offered the first seven weeks every fall. (2 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation,

alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production from conception to execution and analysis. This course focuses on the Theatre Department Main stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

- Elective

Spring

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

- Quantitative Literacy Requirement

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

- Elective

Third Year

Fall

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

- LAS 2130 (LAS 5)

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production from conception to execution and analysis. This course focuses on the Theatre Department Main stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the

historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

Spring

TH 3240 - Directing

The goal of this course is to develop and discover an understanding of the responsibilities, resources and process of the theatrical artist known as the director through lecture, discussion and class exercise. This hands-on creative approach will explore the journey of the director from casting to production through exercises and scene work. *Offered every spring. (4 Credits)*

TH 3320 - The Design Process

An exploration of the process of theatrical production design (scenery, lighting, and costumes). Specific areas of study include design history, theory, and script analysis. *Offered the first seven weeks of every spring. (2 Credits)*

- LAS Elective

Summer

TH 4920 - Summer Professional Immersion Experience

Students will be fully involved in all aspects of a production of the Open Door Theatre. Students will work alongside and with a professional company and culminating course work will result in an acting showcase or technical portfolio to be critiqued by company members. *Offered every summer. 6 Credits.*

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (4 Credits)

TH 2440 - Production Analysis

Note:

* **Notes on suggested course sequence:** TH 2440 can be taken in 2nd, 3rd or 4th year and is offered every fall. TH 3950 can be taken in either 3rd or 4th year - however it is only offered every other fall.

Women's and Gender Studies

New England College offers a Minor as well as the opportunity for an Individually Designed Major in Women's & Gender Studies.

About Women's & Gender Studies

Women's & Gender Studies is an interdisciplinary academic field which explores issues of power, gender identity, and hierarchy, based on sexual difference. Drawing upon a variety of traditional disciplines, such as philosophy, psychology, sociology, literature and the arts, Women's & Gender studies offers students an opportunity to learn how women and men of various racial, ethnic, economic and sexual identities are affected by the construction of gender and theories of sexual difference.

Because women's and feminist scholarship has so dramatically altered our way of thinking about and understanding the world, students in this discipline perform a cross-disciplinary germination of ideas that complements and informs every academic field and profession, making it an ideal minor or double major. Combining theory and practice, Women's & Gender Studies allows students to explore cultural, political, and historical contexts for understanding sex and gender in light of social justice and human rights concerns.

The following outcomes are indicative of successful completion of a minor or individually designed major in Women & Gender Studies. Students will be able to,

- Demonstrate an understanding of the categories of sex, gender, race, and class as they apply to the social construction of reality;
- Demonstrate through written and verbal communications a familiarity with the language and terminology of the discipline;
- Articulate relationship between categories of sex, gender and issues of social justice;
- Explain shifting definitions of sex and gender;
- Demonstrate familiarity with women's contributions to culture, history, politics, etc.
- Demonstrate familiarity with key periods in the historical and political struggle for women's and gender equality;
- Apply critical feminist analysis to knowledge across the disciplines.

Major

Women's & Gender Studies, Individually Designed

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Interested students may develop a course of study built around the Women's & Gender Studies theme by drawing from appropriate courses from the various disciplines at New England

College. Following the publication "Guidelines for Submitting an Individually Designed Major (IDM) Proposal" students will work with the Women's & Gender Studies Coordinator to design the major. The completed proposal will be presented to the Academic Standards Committee for their approval before mid-term of the first semester of the junior year. First year students are not eligible to submit IDM's.

Minor

Women's and Gender Studies Minor

- Description and Learning Outcomes

Requirements

(20 credits)

One course from each of the following three categories:

- Representations of Women and Gender
- Theoretical Perspectives
- History and Social Change

Plus

- Two Upper Level Women's and Gender Studies Electives

Course Selection within the Three Required Categories:

Students can select from a number of possible courses within each of the three required categories of study. Possible courses within each category would include:

Representations of Women & Gender

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal,

critical and contextual analysis that are crucial for those interested in a career in the arts, communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. *(4 Credits)*

CO 3320 - Advertising: History and Criticism

This course explores corporate advertising history and product case studies. Students consider the ways in which advertising developed-and continues to develop-in relation to global consumerism and mass media technologies and in response to social criticism. Students learn to deconstruct advertising images and copy and construct their own ads, spoof ads, and public service announcements. *(4 Credits)*

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

PA 2710 (WS 2710) - Philosophy of the Irrational

In antiquity, Socrates tells us, "Some of our greatest blessings come to us by way of madness." What is the relationship between the irrational and the madness of love, of creativity, or of religious ecstasy? Has madness/irrationality been associated with one sex more than the other? This course will explore the meaning of madness in the context of the development of reason in the western philosophical tradition. In addition to philosophy and women's studies, this course will be of benefit to students of psychology, education and the arts. *(4 Credits)*

WS 3990 - Topics Courses in Women & Gender Studies

A changing selection of courses designed to offer a variety of subjects in theatre. *Prerequisites: Permission of instructor required Offered upon sufficient demand Variable Credits (2-4) This course may be repeated for credit for different topics. Topics to be determined by the Woman's Study faculty.*

Theoretical Perspectives

PA 2710 (WS 2710) - Philosophy of the Irrational

In antiquity, Socrates tells us, "Some of our greatest blessings come to us by way of madness." What is the relationship between the irrational and the madness of love, of creativity, or of religious ecstasy? Has madness/irrationality been associated with one sex more than the other? This course will explore the meaning of madness in the context of the development of reason in the western philosophical tradition. In addition to philosophy and women's studies, this course will be of benefit to students of psychology, education and the arts. *(4 Credits)*

PA 2810 - Philosophy of Science

An examination of the methods and historical development of the sciences generally, as well as a treatment of philosophical issues that arise in particular sciences. What justifies the view that science is the most objective source of human knowledge? What makes a scientific theory true? To what extent does scientific knowledge depend on history, political perspective, or gender, and what influence do values have on science? Especially pertinent to science majors, but designed for all interested students. Extensive scientific background not required. *Offered as needed. (4 Credits)*

PA 3150 (WS 3150) - Medieval/Renaissance Philosophy

A survey of philosophical and theological writings by men and women that traces the shift from the medieval to renaissance thought. Questions around the significance of the body, the role of gender, the meaning of creation and our place within it, will be explored by engaging with the extraordinarily rich literature of the medieval period. *(4 Credits)*

PA 4010 (WS 4010) - Moral Philosophy

Advanced study of the concepts and judgments of value, including treatment of the notions of good and bad, right and wrong, and theories of moral obligation. Classic and contemporary readings will be engaged to explore contrasting views on the proper role of rules and virtues in morality, the relation of rules to the exercise of morality, moral psychology, an PA 4110 (WS 4110) Feminist Philosophies and the connection of morality to reason. *Offered as needed. (4 Credits)*

PA 4110 (WS 4110) - Feminist Philosophies

This course seeks to pull together the myriad of course experiences a student will have had in women's studies. Focusing on major trends in feminist theory and incorporating global perspectives, students will engage in an intensive reading of feminist philosophers, and authors exploring both traditional and cross-cultural ideas on the nature and/or construction of sexual difference and its relationship to morality, rationality, knowledge, science, politics, etc. *(4 Credits)*

PS 2210 - Human Sexuality

This course is a comprehensive overview of the many dimensions of human sexuality. Topics include love and intimacy, gender, sexual arousal and response, sexually transmitted diseases, sexual expression, sexual coercion, commercial sex, sexual orientation, sexual problems and solutions, conception, pregnancy, and birth control. Students should gain the knowledge necessary to make informed, responsible decisions regarding their own sexuality and sexual behavior. This course contains explicit sexual material. *Every other year (4 Credits)*

- WS/PS 4310 - Psychology of Women

The following courses may count for credit in Women & Gender Studies:

- PS Theories of Personality
- PS Writing and Research in the Discipline
- PS Culture and Practice of Psychology

History and/or Social Change

PA 3150 (WS 3150) - Medieval/Renaissance Philosophy

A survey of philosophical and theological writings by men and women that traces the shift from the medieval to renaissance thought. Questions around the significance of the body, the role of gender, the meaning of creation and our place within it, will be explored by engaging with the extraordinarily rich literature of the medieval period. *(4 Credits)*

WS 3060 (SO 3060) - Social Inequality

Power in the U.S. and in the world - its causes and consequences - will be examined in this course. This is essentially a study of political and economic power and powerlessness. Specific topics to be discussed include poverty, hunger, homelessness, welfare, class conflict, racism, and sexism. *(4 Credits)*

- WS 4830 - Independent Study
(This can include working with organizations for social change in this area or those addressing social problems related to women's/gender issues, e.g., domestic and/or sexual violence.)

The following courses may count for credit in Women & Gender Studies:

Working with the course instructor and the Women & Gender Studies Coordinator, the following courses may count for credit in Women & Gender Studies: *

HS 1110 - Western Civilization to 1500

An introductory survey of European history from ancient time to the recent past, the themes of this course include the development of civilizations, the classical age of Greece & Rome, the Middle Ages, and the development of Europe during the Renaissance, the Reformation, Absolutism, the Scientific Revolution, the Enlightenment, the French Revolution, Industrialization, Romanticism, Nationalism, Imperialism, and global conflicts. *(4 Credits) Not open to students who have taken HS1120.*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

HS 1150 - World Civilization

Despite the apparent success of the West in the last half millennium, much of the world's achievements began or were sustained in non-Western cultures. The pre-Columbian Maya and Inca, the succession of peoples along the banks of the Tigris, Euphrates and Nile and of course China have all made remarkable contributions to the modern world as we know it long before Europeans could read or write. *(4 Credits)*

HS 2990 - From Acorn to Oak

Exploring the study of intimate history: family, community, neighborhood, town or institution, we will then urge the student to make connections from the local to the global. *(2 Credits)*

HS 3010 - Conversations in Early America 1485-1783

From the Age of Discovery to the battlefields of the French & Indian War and the American rebellion this seminar examines the tumultuous careers of explorers and promoters, scholars and pirates, witches and settlers, merchants and slaves. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Travel is involved. *(4 Credits)*

HS 3030 - Revolutionary Republic 1783- 1809

Framing the new constitution and implementing it dominated the end of the eighteenth century and the beginning of the nineteenth. This seminar explores the creation of the new republic from the beginning of American independence to the end of the Jefferson administration. Travel is involved. *(4 Credits)*

HS 3080 - Major Problems in Modern America

This seminar will examine the various themes and problems in American history and culture from the end of Reconstruction to the very near past. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Each student, in concert with the faculty mentor, will design and complete a problem-based individual learning plan. *(4 Credits)*

HS 3410 - Seminar in European History

In this course, we will focus on particular aspects or events in European history. Possible topics include but are not limited to the Great War, World War II and the European Theater, the Holocaust, religious movements, nationalism and the "Other," and gender in European society. *(4 Credits) May be repeated for credit with different topics.*

HS 3420 - Seminar in Global History

As technology brings all corners of the world closer together, we increasingly realize the interconnectedness of historical developments and our own daily lives. In this course, we will examine a variety of global trends and movements from the twentieth and twenty-first centuries, and learn about how they inform our lives today. Possible topics include, but are not limited to, war, terrorism, environmental concerns, social justice, migration, and struggles for human rights. *(4 Credits) May be repeated for credit with different topics.*

PO 4110 - Regional Politics

This course will introduce students to the historical development of government and politics in a specified geographical region. The course will consider such topics as colonialism, nationalism, international economics, and international security. Using the comparative approach, the governments of the major states of the region will be discussed as well. *(4 Credits)*

Awareness/Action Project

Students minoring in Women's & Gender Studies will be required to engage in an Awareness/Action Project to complete the minor. This may be done in one of two ways:

1. Each course offering in the Women's & Gender Studies Program outlines an experiential/immersion component. When appropriate women and gender studies students may focus that activity on issues relevant to the minor.
2. In consultation with the Women's & Gender Studies Coordinator and appropriate W&GS faculty, students can choose to do an independent Awareness/Action project. Possibilities for these projects may include:
 - presentation of research open to the community, including presenting at Spotlight on Students;
 - presentation of women's contributions to history and culture during Women's History Month;
 - internships or community service with organizations committed to working for gender equality or dealing with issues of domestic/sexual violence locally, nationally, globally;
 - organizing community round table discussions relevant to the course of study in minor;
 - working with student organizations such as SOUP or Women's Global Network to raise visibility and awareness of their goals, and assist in organizing community events.
 - working with appropriate campus groups and programs to address enhancing campus climate in relation to sex and gender.

New England College's Undergraduate Residential Program offers students 37 Bachelor's degree programs delivered in the liberal arts tradition by dedicated faculty. With approximately 1,000 undergraduate students from all over the world, New England College brings a richly diverse experience to the town of Henniker, New Hampshire. The Undergraduate Residential Program ensure students are met with an educational experience that is not only challenging, but fulfilling.

Mission Statement

New England College is a creative and supportive learning community that challenges individuals to transform themselves and their world.

Description of Mission

New England College emphasizes experiential learning as an essential component in the development of an enduring academic community. Building upon a strong liberal arts foundation, we challenge our students to reach their full potential through informed discourse and the pursuit of excellence in a framework of academic freedom that reflects the following values:

- *imaginative, innovative, and creative approaches to all endeavors;*
- *respect for self in the development of personal, social, physical, and intellectual abilities;*
- *caring and collaborative relationships among members of our community;*
- *respect for the varied qualities of individuals, communities, and the world;*
- *an appreciation of beauty and elegance in the search for truth;*
- *inquiry into and the pursuit of social justice;*
- *ethical and responsible citizenship, including service to the community;*
- *the pursuit of ecological sustainability;*
- *continuous learning and a lifetime of personal achievement.*

Basic Facts: NEC at a Glance

Just fifteen miles from Concord, the busy capital of New Hampshire, lies the classic New England village of Henniker. The covered bridge, white clapboard buildings, antique stores, inns, and restaurants might all be seen on a postcard. With the hills of southern New Hampshire as a backdrop and the Contoocook River running through its midst, Henniker is the home of New England College. Visitors are immediately drawn in by the picturesque setting and the genuine welcome that they feel. The sense of community is pervasive and embracing with a strong connection between the College and the town.

New Hampshire has always been a popular destination for those seeking the finest in outdoor adventure. With its unparalleled scenic beauty and a wide variety of cultural and recreational activities, New Hampshire offers endless possibilities that include hiking, camping, whitewater kayaking, horseback riding, skiing, and the observation, study, and photography of nature and

wildlife. The College's location provides easy access to all of the state's amenities. Nordic ski trails are available on campus, and alpine skiing is just two miles away.

Students at New England College represent great diversity. They discover a community that is internationally and culturally diverse, a campus that is informal and friendly, and an educational experience that is challenging; all of which leave lasting impressions.

In addition to the array of undergraduate and graduate academic programs that it offers, New England College features a wide range of co-curricular activities that include both a high and low ropes course. The College supports thirteen intercollegiate men's and women's athletic teams including lacrosse, soccer, cross-country, ice hockey, field hockey, softball, baseball, and basketball. More than half of the student body participates in interscholastic athletics, club, or recreational sports. There are more than two dozen student organizations from which to choose including Adventure Bound, the Carriage Theatre Ensemble, the International Student Association and CiviCorps, our organization of citizen scholars and activist. Students publish a campus newspaper, *The New Englander*, and manage the College's radio station, WNEC. Cultural events, social activities, and other co-curricular experiences are regularly scheduled by the Student Entertainment Committee (SEC) in collaboration with the Office of Academic Affairs and the Office of Student Involvement.

A Brief History of NEC

Academic visionary Boone Tillet identified an important opportunity to serve the educational needs of the numerous veterans returning home at the close of World War II. Their expanded vision of the world had awakened a keen interest in all they had encountered. With the growing demand for higher education and a new G.I. Bill available to finance their education, the service men and women of the Greatest Generation eagerly sought out the degree offerings of the nation's colleges and universities.

Tillet chose Henniker, New Hampshire, as the home for a new college dedicated to educating returning veterans. He recruited a fellow scholar, Charles Weber, from Hofstra University to serve as the College's first dean, and arrived in Henniker with a car full of books from his own library. In 1946 New England College welcomed its first class of 67 men and one woman.

A tireless entrepreneur, Tillet soon moved on to new ventures; the momentum he had created sustained the institution through its formative stage. After only three years, enrollment at New England College had more than quadrupled. Through the 1950s the College grew steadily, adding new programs, new faculty, and acquiring additional buildings in Henniker. A period of rapid growth in the 1960s resulted in the construction of several new buildings on campus: a residence hall, dining hall, gymnasium, library, and the Science Building.

New England College continued to expand during the early 1970s, this time across the Atlantic Ocean. The acquisition of a second campus in Arundel, West Sussex, England, proved at that time to be an unconventional and innovative approach to education. Students attending the British Campus were immersed in a learning environment that was international in its perspective and served to heighten their educational experience.

By the 1980s the College had increased its enrollment to more than 1,000 students and added steadily to its inventory of academic buildings. The Lee Clement Ice Arena was one of the largest construction projects completed during that decade.

The advent of the 1990s saw an overall decline in enrollment at the nation's small liberal arts colleges. New England College persevered during the lean financial years, but reluctantly closed its British Campus and focused its energies on its resources in Henniker. New leadership in the '90s led to an unprecedented growth in campus facilities with the construction of the Simon Center in 1993, and in student enrollment. The College greatly expanded its graduate degree offerings and centered its undergraduate programming on innovative delivery. A state-of-the-art teaching facility, the Center for Educational Innovation, opened in 2001, and a new art gallery, theater, and fitness center were brought online during this period.

The most recent addition to the New England College campus is the John Lyons Center, named after NEC's long time business professor. The Lyons Center, situated where Larter Hall was located, represents a major expansion of academic program. In addition to ten state of the art classrooms, there are a number of small group study area's, open study space, and a small cafe`. The Lyons Center is adjacent to the former Henniker railroad station, completely renovated and rededicated as the Currier Alumni Center. David P. Currier, a former trustee of the College and a member of the Class of 1972, provided a major gift to create a welcoming gathering place for all alumni of the College. Together these two buildings represent the first phases to expanding the southern portion of NEC'S campus.

Today, New England College continues to provide an enriching educational experience for both undergraduate and graduate students alike, in a dynamic and supportive learning environment. Our degree programs have recently expanded with new programs added to the School of Graduate and Professional Studies curriculum and the College's first doctoral program. The completion of the \$1.5 million artificial turf field in the spring of 2010 marks the largest building project undertaken by the College since the completion of the Center for Educational Innovation in 2001.

Shared Teaching Commitments: NEC's Approach to Teaching and Learning

New England College Faculty have committed to the following shared teaching commitments:

- 1. A commitment to natural and civic environments.**

The NEC community and curriculum promotes engaged and experiential interaction with our rich natural and civic environments.

2. *A commitment to engaged and experiential teaching principles and practices.*

NEC commits itself to a set of Pedagogical Principles and Practices that characterizes our students' educational experience.

NEC Pedagogical Principles:

- Classroom experiences are connected to the real world
- Courses include physical, hands-on exercises
- Faculty use alternative modes of teaching and learning
- Courses include outside-of-classroom experiences
- Programs include Community Placements or other Experiential Learning activities
- Students' questions drive instruction and relevance

NEC Pedagogical Practices:

- Problem-based Learning
- Service Learning
- Place-Based Learning
- Project-Based Learning
- Collaborative Learning

3. **A commitment to the 21st Century Essential Learning outcomes.**

A New England College education is grounded in particular 21st century outcomes as articulated by the LEAP Campaign promoted by the Association of American Colleges and Universities. These outcomes promote critical thinking skills which are essential for educated members of our society.

Accreditation

New England College is accredited by the New England Association of Schools and Colleges, Inc. (NEASC) through its Commission on Institutions of Higher Education. The Teacher Education Program (and the certifications in elementary education, physical education, secondary education, special education, principal, and superintendent) is approved by the New Hampshire Department of Education.

New England College is also a member of the New Hampshire College and University Council (NHCUC). Under its Student Exchange Program, students may enroll at other NHCUC institutions to take individual courses, or as full-time students for one or two semesters. This cross-registration is on a space-available basis. Courses taken at NHCUC institutions by a matriculating student are considered equivalent to courses taken at New England College, and are included in computing the NEC grade point average. Students wishing to participate in the

Student Exchange Program should consult with their academic advisors and pre-register with the student-exchange coordinator in the NEC Registrar's Office.

NHCUC member institutions include Antioch University of New England, Chester College New England, Colby-Sawyer College, the Community College System of New Hampshire, Dartmouth College, Franklin Pierce University, Granite State College, Hellenic American University, Keene State College, Massachusetts College of Pharmacy and Health Sciences, New Hampshire Institute of Art, Plymouth State University, Rivier College, Saint Anselm College, Southern New Hampshire University, and the University of New Hampshire. Students remain degree candidates and continue to pay normal New England College tuition, but must make their own room and board arrangements and pay any extra fees (e.g. student activities) directly to the NHCUC institution. New England College is a charter member of Project Pericles and a member of Campus Compact.

Campus Facilities

Simon Center

The heart of the NEC campus is the Simon Center. Built through the generosity of former United States Secretary of the Treasury William Simon (1927-2000) in honor of his three daughters who are alumnae of New England College, the Simon Center serves as the campus center for the College. Conveniently located, the Simon Center is the focal point for many of the College's co-curricular activities and larger public presentations. The Simon Center also features the Pathways Center, administrative offices for Student Life, several meeting rooms, the Great Room, the College Bookstore, Mail Center, and Campus Communications Center. Also in the Simon Center are the Campus Café, Tortington Arms Pub, the Sayce Lounge, Reflection Room (for quiet contemplation), and offices for student-oriented programs and activities.

Center for Educational Innovation

The CEI building is a 14,000 square-foot state-of-the-art teaching facility adjacent to the library and outfitted with the latest in educational technology. The first floor features classrooms with audio-visual computer projection equipment as well as Promethean Boards. A link between the main teacher console and networked data ports allows students and faculty to participate in video conferencing with students and teachers all over the world. The second floor is the home of the College's Education Department, where teachers-in-training are given the opportunity to work alongside experienced mentors as both use the latest technology to enhance their approach to teaching and learning.

H. Raymond Danforth Library

Telephone: 603.428.2344

The H. Raymond Danforth Library, located at the center of campus, is an inviting space in which to conduct academic research or relax with a good book. The Library supports the mission of the College by providing a creative, innovative and supportive learning environment for the entire community, including students, faculty and staff. Combining its traditional responsibility as a repository for academic-related materials with its mission to contribute to the dynamic learning environment of the College, the Library's staff is dedicated to providing the New England College community with the professional expertise and personalized attention they need to fulfill their research and information needs.

In addition to the formal classroom instruction they receive, students enjoy opportunities for special workshops and individualized attention relating to their academic endeavors. A close working relationship between the College's faculty and the Library staff allows for a successful coordination of homework and scholarly research.

A full complement of both print and electronic resources is available through the Library. More than 100,000 volumes and 150 print periodical subscriptions can be found in the Library's two floors of open stacks. Access to more than 15,000 periodical titles, full-text databases, and a number of reference sources is provided through the Library web page. Further resources provided at the web page include subject-specific Internet resources as well as assignment-specific topics designed by the librarians to aid students, faculty and staff with their research needs. A selective depository for New Hampshire state documents, the Library also contains specialized collections of Shakespeare and New Hampshire-related materials.

The Pathways-Tutoring Center, located on the second floor of the Danforth Library, provides a variety of academic services including professional and peer tutoring programs. Tutors are available for individual, group and drop-in tutoring six days a week. They focus on core academic needs, such as math and writing, as well as support for specific academic courses. Professional and peer tutors also work with faculty members to assist students with study skills, study halls, time management, test reviews and goal setting. The center's major objective is to facilitate academic success while encouraging students to become independent thinkers.

The Library is home to a thirty-seat computer lab, several comfortable reading rooms, quiet study space and an instruction area. It is open nearly 100 hours each week and reference assistance is available more than 70 hours a week.

New England College is a member of the New Hampshire College and University Council (NHCUC), which supports an active interlibrary loan program with the participating institutions. The NHCUC members also allow students and faculty common borrowing privileges at each institution's library and access to their combined holdings of more than five million volumes.

The Library is also a member of GMILCS, Inc., a consortium of public and academic libraries in southern New Hampshire. The consortium allows New England College students with a current ID to check out materials from any of its members, including the public libraries of Amherst, Bedford, Derry, Goffstown, Hooksett, Manchester, Merrimack, Milford, Salem and Windham, New Hampshire, as well as the New Hampshire Institute of Art. As a participating member in the OCLC worldwide network of libraries, New England College students have access to shared cataloging and interlibrary loan from library collections throughout the world.

Information Technology

The Office of Information Technology installs and maintains all campus technology used for teaching and learning. The College maintains approximately 145 Windows and nearly 40 Apple Mac computers for students located in five campus buildings. The Science Building has four computer labs, two of which feature Macintosh computers for academic use. The Science Building also has a mobile wireless cart with 10 laptops and printing capabilities, movable to any classroom in the building. The Danforth Library has a lab featuring 30 computers with printing capabilities, along with an additional 6 Macintosh computers. Spaulding Hall's Writing Center has 35 PCs and printing capability for use by students in writing courses. Both classrooms have Promethean interactive white boards. The CEI (Center for Educational Innovation) has two mobile laptop carts available for classroom use. The Simon Center contains a small lab in the Pathways Center for quick email checks, casual surfing, and printing. All student and instructional buildings on the campus provide wireless network access to complement the primary wired network.

In support of the student portfolio program, the CEI has a small design studio containing PCs with scanning and multimedia capability.

In addition to computers, the CEI's classrooms are all equipped with multimedia technology including VCR/DVD players, speakers and digital projectors. Room 110 in CEI, named after NEC alumnus David Lockwood, has a high-end multimedia system featuring video and computer projection systems along with high-end audio output. Classrooms across campus also contain Promethean interactive white boards. New England College has an active online course program, supported through the use of Blackboard course management software. Students can find valuable course supplements and engage in virtual discussions through this medium. Faculty can use the latest design software to produce interactive courses.

Administration Building

Built in 1805 as a resort hotel, the Administration Building maintains its historic charm while serving as the location for many of the College's administrative offices. In addition to the Office

of the President, the Administration Building houses the Offices of Admissions, Public Information, Student Financial Services, and Human Resources.

Currier Alumni Center

The historic Henniker railroad station, constructed in 1900, is the newest addition to the New England College campus. David P. Currier, a former trustee of the College and a member of the Class of 1972, provided a major gift to create the center in 2011. The facility serves as an entryway and meeting place for visiting alumni, and houses a large collection of archival material and memorabilia. The Currier Alumni Center provides office space for members of the Office of Advancement.

Science Building

Built in 1972, this complex is completely outfitted with laboratories and classrooms. Two of the Science Building's laboratories underwent extensive renovations in 2011 and now feature new equipment, instruments, and space for student research and experiments. The building contains four multi-station computer labs, a state-of-the-art Mac Lab that supports our digital photography and graphic design programs, and a video-conferencing facility that promotes collaboration with an extended network of students and scholars.

Bridges Gymnasium

Bridges Gymnasium is the home of the College's intercollegiate men's and women's basketball teams. It also functions as a center for recreational sports and extracurricular activities such as Tae Kwon Do and dance. Many of the coaches' offices, the varsity athletic training room, locker rooms, and the fitness center may also be found in Bridges Gymnasium.

Fitness Center

The fitness center, located in the lower level of Bridges Gymnasium, is open to all members of the New England College community. It is designed to provide the community with a facility dedicated to the pursuit of physical conditioning. In addition, the Fitness Center serves as a venue for the practical training of our students studying the field of kinesiology. It is equipped with cardio machines, more than 2000 pounds of free weights, and plate-loaded Bodymasters weight equipment.

Lee Clement Ice Arena

Built in 1991 and named for an alumnus and long-time staff member of the College, the Lee Clement Ice Arena is home to the men's and women's ice hockey programs and serves the

College's hockey and figure skating clubs. The Office of the Athletic Director, as well as offices of several coaches, is located in the arena.

The Field House

The Field House is an all-purpose facility that serves the College's varsity and recreational sports teams. It is equipped with an artificial playing surface that replicates outdoor capabilities in an indoor, weather-protected facility. It is adjacent to both the Lee Clement Ice Arena and Bridges Gymnasium.

Laurie Cox Athletic Fields

With more than 26 acres of athletic fields, New England College offers an extensive facility for intercollegiate and recreational programs. Our students enjoy baseball, softball, soccer, field hockey, lacrosse, cross-country track, and informal recreational activities that require the use of open stretches of land. Located adjacent to the Laurie Cox Athletic Fields are the College's tennis courts.

Don Melander Turf Field

One of the cornerstones of the College's athletic facilities is the \$1.5 million dollar Don Melander Turf Field completed in 2010. Supporting both varsity and recreational sports, the turf field is an integral component of the learning experience of our students and is used by men's and women's lacrosse and soccer, field hockey, classes, club sports, recreational sports, individual users, and community groups.

Ropes Course and Trails

New England College has more than three miles of woodland trails for snowshoeing, cross-country skiing, and short hikes. We also have a state-of-the-art high and low ropes course used for classes in outdoor leadership and education as well as co-curricular programs which promote team building, leadership development, and communication skills. Downhill skiing and snowboarding facilities are available free to students, faculty, and staff through a partnership with the Pats Peak Ski Area in Henniker.

The Mainstage Theatre

The Mainstage Theatre, located in the College's Science Building, is an ideal venue for the ambitious schedule of dramatic performances held throughout the calendar year. Built in 2002, it is an intimate, Off-Broadway style theatre. It seats 103 and is handicap accessible. The theatre

features a two-level stage, computerized lighting and audio systems as well as a fully equipped workshop for scenery construction.

Studio Theatre

Providing a second space ideal for the dramatic presentations of New England College students, this black-box theatre is suitable for full theatre productions, workshops, or poetry readings. It is located in the Carriage House and is the home of the student-run Carriage Theatre Ensemble.

Art Studio

Tucked away on the edge of campus, the Art Studio offers both students and faculty a quiet setting for creative expression in the visual arts. This intimate space is conducive for work in oils, pencil, photography, sculpture, or the graphic arts.

Art Gallery

The New England College Gallery is committed to promoting and exhibiting contemporary and historically significant art to enhance the curriculum and encourage cultural inquiry and dialogue. The Gallery produces rotating exhibitions and programming in support of the mission and values of the College and provides a cultural access for the community and the region. The 1,500 square feet of light-filled exhibition area is ideal for drawings, prints, paintings, photography, sculpture, and multimedia works. The Gallery's permanent collection includes more than 550 works in a variety of media and was recently gifted 150 original Andy Warhol photographs through the Andy Warhol Photographic Legacy Program. It is open to the NEC community and the general public free of charge throughout the year.

Carriage House

Located behind the Administration Building, Carriage House is the home of the College's Studio Theatre. The offices of the Finance Department are located in Carriage House, which also houses the English Language program and International Students Resources.

Cogswell House

This impressive Colonial-styled structure is the home of New England College's president. Many College functions are held at Cogswell House as well as informal meetings for students, staff, and faculty.

Spaulding

Located on Bridge Street, Spaulding House is the home of the communication, English, and writing departments, and the College's writing lab.

Lewin House

An older, white clapboard building, Lewin House is the mentoring department.

Tower House

The Art Department is located in Tower House. Art faculty offices are also found in this building.

Bridge Street House

Bridge Street House is the home of the Career & Life Planning department.

Davis House

Located across the street from Bridge Street House, Davis House serves as the Headquarters for the Office of the VPAA and Office of Academic Affairs.

Fitch House

Fitch House is the home of the history and kinesiology departments.

Preston Barn

Located next to the Administration Building and the Art Gallery, Preston Barn Theatre Lab is home to offices for theatre faculty, the theatre lecture classroom, properties storage, and the costume shop.

Greenhouse

The Greenhouse was constructed by NEC students and completed in 1973. It is a valuable resource for the biology department and is used frequently for horticulture and botany courses. Funds for the construction of the building were donated by Ernest DuPont.

New England College Center in Concord

NEC Concord began operations in the fall of 2013. Located centrally in the state capital at 62 North Main Street, NEC Concord strategically supports the College's mission. Graduate and

undergraduate courses are taught in the state-of-the-art classrooms. Educational series, musical and theatrical performances, and panel discussions with local professionals are scheduled 3-4 nights a week, open to both the NEC community and the general public. NEC faculty and students use the site as a home base for local internships, service learning initiatives, and meetings with business and non-profit leaders. The emphasis is on community engagement, on bridging the gap between college and community.

Enrollment and Admissions

Undergraduate Admission

Telephone: 603.428.2223

New England College's admission process recognizes the unique attributes of every individual. The College welcomes students who have demonstrated academic achievement, as well as those who may not have yet performed to their full potential. The College seeks students who are ready to develop strong educational values, demonstrate a desire to reach for excellence, show an appreciation for diversity, demonstrate social responsibility, possess the capability for leadership, and those who wish to become members of the global community.

Factors which we consider when making an admission decision include:

- *academic transcripts (official high school transcript, official GED results, etc.);*
- *letters of recommendation;*
- *a written essay of at least 250 words;*
- *extra-curricular activities, volunteer experience, and work experience.*

New England College requires a completed high school diploma (or a school-leaving certificate or equivalent) for matriculation into baccalaureate programs. The College suggests that a student complete at least four years of English, three years of math (up to Algebra II), three years of science (one being a lab science), and three years of social science, all in a college preparatory track. The College invites applications from both first-time students who enroll directly after high school, and transfer students, for both the fall and spring semesters. Applications are processed on a rolling basis, which means that a decision is made approximately two weeks after an application file is completed. Although there is no specific deadline, students are encouraged to apply prior to April 1 for the subsequent fall semester and prior to December 15 for the spring semester.

How to Apply

1. Complete the New England College Application for Admission or the Common Application. Both applications are available and to be completed online. The College has no preference on your method of application. Links to the applications may be found at <http://www.nec.edu/apply/>. NEC does not charge an application fee.
2. Send the completed application, including your written essay to the Office of Admission:
Office of Admission
New England College
98 Bridge Street
Henniker, NH 03242-3297
800.521.7642 or 603.428.2223
FAX: 603.428.3155 / Email: admission@nec.edu
3. Applicants are required to have an official transcript sent to New England College by their high school. Follow the instructions provided by your school guidance counselor to request that your transcript be sent. Students are encouraged to submit additional recommendations from sources that highlight their academic, extracurricular, and/or personal strengths. Often, students submit activity sheets or resumes to demonstrate personal achievements. If students have unofficial copies of high school completion but official copies cannot be obtained, the Registrar will review submitted materials for admission only.

Home-Schooled Students are welcome and encouraged to apply and submit a transcript and/or portfolio of academic work.

Transfer Students

In addition to the steps listed above in the "How to Apply" section, transfer students must arrange for official transcripts from all colleges attended to be sent to the New England College Office of Admission. Ask him/her to complete the form and mail it to the Office of Admission

cc2nec

CC2NEC is short for Community College to New England College. Any student who was accepted by a community college and is in good academic standing, is automatically accepted to New England College. Students complete an application for admission and submit transcripts, however they do so knowing that admission is guaranteed. NEC allows up to 90 credits to transfer, and all programs are open for either the fall or spring semesters.

Transfer Articulation Agreements

New England College has transfer articulation agreements with many two-year institutions. These agreements provide that two-year college students who graduate with an associate degree and a specified grade point average will be accepted and will receive both transfer credit and advanced standing upon transfer to NEC. For a current list of schools with which NEC has transfer articulation agreements, see the website: www.nec.edu.

International students

International students whose native language is not English, must demonstrate English proficiency by submitting the results of either the Test of English as a Foreign Language (TOEFL), IELTS or PTE. Students with TOEFL iBT scores 75 are eligible for unconditional admission. Students with scores between 40 and 74, are eligible for admission contingent upon their enrollment in English as a Second Language, offered here at New England College.

International students are required to document the availability of funds to cover tuition and living expenses for the entire period of stay in the U.S. before an I-20 (Certificate of Eligibility for Non-Immigrant F-1 Student Status) can be issued by New England College. Students should submit the "Declaration and Certification of Finances" form with original signatures and bank statements to the Office of Admission.

Standardized Tests

New England College is testing-optional for admission which means that standardized tests such as the SAT or the ACT are not required. Students who wish to submit their scores as part of their application may do so. The New England College code for the SAT is 3657, and for the ACT it is 2513.

Additional Instructions for Veterans

In keeping with the founding mission of the College, NEC, which has been designated a "Military Friendly" school, welcomes students with military service, providing substantial financial assistance and support services. Updated Information on this program is posted on our website www.nec.edu.

Veteran applications should submit a copy of DD-214, Certificate of Eligibility (or DD2384 for National Guardsmen) for verification of eligibility for the veterans program. Applications for veteran benefits may be obtained directly from the VA by visiting the VONAPP (Veterans Online Applications) website. In addition to the steps listed above in the "How to Apply" section, you must arrange for transcripts to be sent through the American Council on Education (ACE), depending on the branch of the military (SMARTS, AARTS, or Community College of

the Air Force). ACE transcripts can be requested through ACE at www.acenet.edu; select "Programs & Services," then "transcript requests."

For more information, veterans are encouraged to visit www.nec.edu, and type "veterans" in the search bar in the upper right hand corner of the home page.

NEC-Plus Students

Adult students who are applying for entry into New England College's undergraduate bachelor programs may be eligible for the NEC Plus program if they are at least 25 years of age AND one or more of the following: married, have legal dependents other than a spouse, and have not been enrolled at New England College in the past four years. All NEC Plus students take courses along with the traditional undergraduate students at NEC. This discounted program offers courses at a much lower rate than the regular undergraduate programs at NEC. Students admitted to NEC Plus may take courses during the day or in the evening (limited), and may attend full- or part-time. There are only a few restrictions to this program:

1. Regular full-time students are given first priority in course selection.
2. Access to academic advising, support, and tutoring is limited; full-time traditional students are given first priority.

NEC Plus students are eligible for federal and state financial aid programs, provided they are enrolled at least half-time. The College does not award institutional scholarships or grants to NEC Plus students. Applicants to the NEC Plus program must apply for admission as all specified above. To speak with an admission counselor, contact the Office of Admission by phone at 603-428-2223.

Administrative Policy Concerning English as a Second Language

NEC offers a multi-level program for English language learners, which enables students to enhance communication and comprehension skills while earning college credits as proficiency develops. Our ESL Program is open to students with low-intermediate to intermediate level English proficiency who have met admission standards with the exception of English proficiency.

All applicants must apply for admission and submit documentation as specified above. The ESL program runs parallel with undergraduate and graduate academic terms. When a student achieves a satisfactory level of English proficiency, s/he will be permitted to enroll in the full academic degree program without required English language instruction. Students may begin the ESL program either in late August or mid-January.

1. Any student whose first language is not English must an approved English proficiency test including the TOEFL, IELTS, PTE, or equivalent examination.
2. A student who scores 75 or higher on the TOEFL iBT will be unconditionally accepted to New England College.
3. Students who score between 40-74 on the TOEFL iBT may be conditionally accepted to New England College. This acceptance is contingent upon completion of the English as a Second Language program and obtaining a minimum TOEFL score of 75 iBT, or equivalent.

Students not meeting any or all of the above criteria may petition the Academic Standards Committee for an exception to the policy.

Visiting Students

Students attending and planning to graduate from another college or university, but wishing to spend a semester or more at New England College, should contact the Registrar's Office registrarsoffice@nec.edu or 603-428-2203.

Deposit Policy

An accepted student is asked to submit a \$300 enrollment deposit by May 1 for the fall semester, and by December 15 for the spring semester to guarantee a place in the entering class, register for courses, and receive a housing assignment. This deposit is fully refundable until May 1 for students entering in the fall semester or December 15 for students entering in the spring semester. Upon enrollment, \$150 of this deposit is applied to the first semester's charges. The remaining \$150 is held as a financial reserve and will be returned, less any outstanding charges, upon graduation or official withdrawal from the College. An official withdrawal requires both written notice of withdrawal and completion of a withdrawal interview.

Readmission

Students who seek readmission to New England College must apply through the Pathways Center. They must submit transcripts from any college or university attended since leaving New England College. Students will normally be readmitted under the requirements of the catalog in effect at the time of readmission.

Visiting Campus

Prospective students and their families are encouraged to visit New England College to experience the personal nature of campus life, and the beautiful environment. Every visit includes a guided campus tour, the opportunity to meet with an admission counselor and a financial aid counselor. We also routinely arrange for students to sit-in on one or more classes,

meet with the professor and/or coach, and enjoy a meal in Gilmore Dining Hall. Preview Days and special open house events are offered. On selected Saturdays throughout the school year. For a visit to the campus, contact the Office of Admission at 603-428-2223 or 800.521.7642, Extension 2223 or admission@nec.edu. Visits may be scheduled online at www.nec.edu/visit.

Graduate Admission

Professional training and advanced academic experience is important when building a career, earning a positive reputation, and enriching your life. The Graduate and Professional Studies programs at New England College provide learning experiences in a variety of fields and specialties. We understand everyone has different learning styles and schedules, so our programs are built to be versatile, comprehensive, and enjoyable on campus, online, or at a convenient site nearby. Expert faculty, real world experience, and proven curriculums make our educational engagement rich. Whether you are a working professional, recent graduate, career-changer, or someone seeking a more thorough knowledge in your field, we believe New England College is where you belong. Information can be found at <http://www.nec.edu/admission/> or by sending an email to graduateadmission@nec.edu.

Joint Degree Programs

New England College/New York Law School 3+3 Program

Students who meet specific admission criteria may opt for an accelerated program that allows them to complete their bachelor's degree from New England College and their *Juris Doctor* degree from New York Law School within a six-year period. Entrance to the joint degree program may occur at one of several points, based upon the applicant's background, achievement, and demonstrated academic potential, with appropriate criteria specified for each potential point of entry. Entering New England College freshmen who apply for this program must have a combined SAT score of at least 1200 and a weighted grade point average of at least 3.4 achieved in a rigorous high school curriculum. For the student who has completed the first year of study at New England College, admission to the program is likely if the student has a minimum combined (math and verbal) SAT score of 1100 and a cumulative NEC grade point average of at least 3.5. Students who have completed the junior year at NEC and entering transfer students may also be eligible for admission to NYLS, provided they meet specific admission criteria. Students must maintain an undergraduate grade point average of 3.0 or better to maintain eligibility in the joint degree program. Additional details regarding this program and the application process may be obtained by contacting the Office of Admission.

Massachusetts College of Pharmacy and Health Sciences Programs

MCPHS allows for up to five qualified NEC students to transfer into either the physician assistants' (Master of Physician Assistant Studies) or pharmacy program (Doctor of Pharmacy), and seven qualified NEC students to transfer into the nursing (Post-baccalaureate Bachelors of Science in Nursing) program. Students must have at least a 3.2 cumulative GPA in the prerequisite coursework at NEC (see requirements for professional tracks under Biology and Health Science major) and receive a pre-admission interview from MCPHS. Students must declare their intentions to transfer into one of the MCPHS programs by January of their fourth year at NEC. Please contact Dr. Debra Dunlop (ddunlop@nec.edu) for more information.

Continuing Education

New England College offers a expansive selection of online continuing education (undergraduate and graduate) courses and degrees. Course schedules can be seen for the current and upcoming terms on the New England College website at www.nec.edu. Most programs are offered in accelerated 7-week formats through online offerings.

Students wishing to register for courses as non-matriculantes may apply by completing the Special Student Registration Form available at the Registrar's Office. Tuition information is available through the Student Financial Services Office. Payment may be made by credit card, check, or money order, payable to New England College. To pay by credit card, contact Student Financial Services at 603.428.2226. If paying by check or money order, mail to:

*Student Financial Services
New England College
15 Main St.
Henniker, NH 03242*

Honors Program

Introduction

The New England College Honors Program (NECHP) offers special challenges and opportunities to a limited number of academically talented and highly motivated undergraduate students. It fosters collaborative relationships between students and faculty through small intensive classes, a faculty mentor system for introducing students to the intellectual standards and methodologies of academic disciplines, and informal contacts encouraged by co-curricular offerings. NECHP courses and projects represent additional opportunities for academically gifted and adventurous students; they are not an alternative curriculum. Honors programs are designed to nurture talent by providing opportunities to go farther into an academic discipline, to broaden

and deepen an education beyond the usual required work, and to nurture and reward genuine intellectual curiosity.

Eligibility

Students may be admitted to the NECHP based on their academic achievements prior to their entry into the College. Criteria for admission to NEC as Honors students might include, but may not be limited to, one or more of the following:

- High School GPA (3.25 or better)
- Recommendations from two qualified referees aware of the competitive nature of the program.
- Application essay (specific to the NECHP application process)

Transfer Student Eligibility:

1. Transfer GPA of 3.0 or above
2. Recommendations from two qualified referees aware of the competitive nature of the program
3. Application essay (specific to the NECHP application process)

NEC students

Students may apply to the program during their first year. Criteria through which second-year might enter the program include exceptional performance in first-year courses (including Honors versions of the 1st year courses which any highly motivated student might attempt with the instructor's permission), a record of achievement in another college's honors program and the recommendation of two or more Faculty members.

1. An NEC GPA of 3.25 after 30 credits of work
2. Recommendations from two qualified referees aware of the competitive nature of the program
3. Application essay (specific to the NECHP application process)

Why should students aspire to become Honors Scholars at NEC?

- *Challenging core courses*
- *Interaction with an outstanding group of peers*
- *Social and intellectual activities outside the classroom*
- *Priority registration*
- *Transcript notation of Honor's Diploma can have practical benefits: prospective employers and graduate admissions committees often look carefully at an undergraduate record for evidence of extra initiative and genuine intellectual strength.*

Honors Curriculum

Each Honors Scholar must complete a minimum of four honors courses and must enroll in the interdisciplinary honors seminar each semester that they are a student at NEC. In the junior or senior year the student will conduct two semesters work on an honors project that is separate from any capstone or senior thesis required by the major. The student will work with a faculty mentor and will also be advised by an honors project committee of two additional faculty members.

Honors Research and Scholarly work Symposium

At the end of the Spring Semester the honors students will help organize a showcase of scholarly and artistic work. Juniors and Seniors conducting an "honors project" will present their projects at this event.

Honors Diploma

Program Requirements for an Honors Diploma:

A student will receive an "honors diploma" by completion of all of the following

1. A total of 4 designated Honors classes which may include *Honors LAS 1*, *Honors LAS 2* and *Honors LAS 7* and/or additional honors eligible courses.
2. Interdisciplinary honors seminar each semester that the student is enrolled in the program.
3. Honors Project
4. Final GPA of 3.25 or above

Honors Committee

The Honors Committee consists of the Director of the Honors Program and one faculty member from each of the College's academic divisions.

Tuition and Fees

Telephone: 603.428.2226

Email: sfs@nec.edu

Full-time Students

Full-time students are those who register for 12-18 credits per semester. An additional charge of \$1,092 will be incurred for each credit over 18 credits. **Students with a cumulative grade point average of 3.50 or higher may register for a maximum of 20 credits without incurring an overload charge.*

Part-time Students

Part-time students are degree-seeking students who register for fewer than 12 credits. Part-time students pay \$1,673 per credit. They must also pay the financial deposit and applicable student fees each semester. All students in College housing are required to pay full-time tuition regardless of credit load. Part time students are not eligible for merit scholarship or NEC need-based grant funding.

Internships

The cost for an internship shall be the same as for any other course. Internships are subject to extra credit charges if more than 18 credits are taken during one semester.

NHCUC Exchange Program Students

New England College students attending other New Hampshire College and University Council (NHCUC) institutions on a full-time basis must pay New England College's full-time tuition. Any other fees required by the NHCUC institution are to be paid directly to that institution. Full-time students from other NHCUC institutions who attend New England College must pay their home institution's full-time tuition. Any other fees required are to be paid directly to New England College.

Residence Halls

Residential Life and Housing fosters a positive living and learning environment for approximately 600 residential students. Four full-time professionals and 22 highly trained student staff members administer residence hall services and community standards. College housing policies are contained in *The Compass*, the New England College Student Handbook. This information can be found on-line at <http://www.nec.edu/student-life/student-handbook>. The residence halls are for full-time enrolled New England College students. As a residential college, all students are expected to live in college-owned-and-managed residential facilities for three years. Exceptions to this policy may be made on an individual basis through the petition to move off campus process. Please note that students who are 23 years of age or older by August 1st of the upcoming academic year, married or have civil-union status, have a child (or children), have a permanent home address with a parent or guardian within a 30-mile radius of campus, or who

have been previously approved for an off campus medical accommodation may be exempt from this housing requirement. All residential students are required to purchase a meal plan depending upon their year. All housing and meal plan contracts are binding agreements made for the entire academic year. *Contact Residential Life and Housing at 603.428.2242 or reslife@nec.edu for more information.*

Current students who are required to live on campus for the following academic year and who do not select a room and meal plan during the room selection process will be assigned an on-campus room and a 19-meal plan and be charged accordingly. Likewise, new students who are required to live on campus who do not submit completed Housing and Meal Plan contracts by August 1 will be assigned a room and a 19-meal plan and charged accordingly.

Prior to moving in to their assigned room, all students will be required to sign Housing and Meal Plan contracts. Students who choose not to occupy their assigned room will be charged for the full cost of their room based on the above stated requirements. Likewise, students who choose to not make use of their meal plan will be charged for the full cost of their meal plan based on the above stated requirements.

Type of Room	Cost per Semester	Cost per Year
West, Colby, Connor Double	\$3,060	\$6,120
Charter Single	\$4,750	\$9,500
East Single	\$4,750	\$9,500
Sanborn Single	\$4,350	\$8,700
Rowe Single	\$3,800	\$7,600
Rowe Apartment	\$4,750	\$9,500
Union Single	\$4,750	\$9,500

**Certain limitations apply. Please contact Residential Life and Housing for more details.*

Housing Contract Release & Termination

- *Eligible students who participate in room selection will have until May 1 of that year to opt out of their housing contract without penalty;*
- *Between May 2 and July 31 of that year eligible students wishing to opt out of their housing contract must submit a request in writing to the Residential Life and Housing Office. If eligible, they will be released and charged a \$1,500 contract release fee;*

- *After July 31 of that year, all students are financially responsible for the charges associated with the housing contract and meal contract for the entire academic year.*

Dining Services

Meal Plans

Gilmore Dining Hall contains dining rooms and provides cafeteria-style service, with two segments of seating in a bright, open floor plan. At this facility, students may use their meal plan allowances or pay in cash. The Simon Center houses the café which is a "to-go" option. At this facility, students may use their Flex Cash or pay in cash. All meals are planned and prepared under supervision of a contract food service.

The College has established the following meal plan policy for students:

- *Upperclass residential students are required to select one of four meal plans - 19, 15, 10, or 7 meals per week, each of which have their own allotment of Flex Cash; Only seniors are eligible to purchase the 5 meal plan; Once a meal plan has been selected, it cannot be decreased, only increased.*
- *All resident students in their first academic year at the College are required to purchase a 19 or 15 meal plan; Once a meal plan has been selected, it cannot not be decreased, only increased.*
- *Non-residential students may select any one of the four meal plan options (i.e., 19, 15, 10 or 7). These selections are binding for the entire academic year. Once a meal plan has been selected, it cannot be decreased, only increased.*
- *Non-residential students also have the option to purchase a "commuter" meal plan. (Please see the housing office for details); Once a meal plan has been selected, it cannot be decreased, only increased.*

Meal Plan Contract Release & Termination

- *Eligible students who have been released from the 3 year on campus housing requirements and/or their housing contract will not be charged for their meal plan.*
- *Between June 1 and July 31 of the upcoming academic year, eligible students wishing to cancel their meal plan contract must submit a request in writing to Residential Life and Housing. If approved, students will be released and charged a \$1,500 contract release fee.*
- *After July 31 of the upcoming academic year, all students are financially responsible for the charges associated with the meal plan contract for the entire academic year.*

On-campus residents will not be released from the meal plan contract unless they no longer attend New England College. Exceptions to this policy are made on an individual basis through

the meal plan contract release petition. In addition these processes must be followed for any requests based on financial and/or disability accommodation. Please contact the Residential Life and Housing for more information. All meal plan contracts are binding agreements made for the entire academic year. Once a meal plan has been selected, it cannot be decreased, only increased.

Meal Plan Name	# of meals per week	Amount of Flex Cash per semester	Cost per semester	Cost per year
Extra	19	\$100	\$3,708	\$7,416
Gold	15	\$160	\$3,055	\$6,110
Silver	10	\$200	\$2,615	\$5,230
Bronze	7	\$240	\$2,200	\$4,400
Senior	5	\$400	\$2,055	\$4,110

Flex Cash

Each meal plan also includes a starting balance of Flex Cash. The amount is added to each student's meal card and may be used in either Gilmore Dining Hall or the Simon Center Café to purchase additional meals for the meal plan participant or a guest.

Any unused Flex Cash from the Fall semester will "roll over" into the Spring semester. Any unused Flex Cash funds will be lost at the end of the Spring semester.

Student Health Services

New England College is concerned with the promotion of good health and the prevention of sickness and injury among its students. The Wellness Center provides a variety of services that are essential to the welfare of our student body. Services for minor illness and injury are provided by nurse practitioners or a medical doctor. The Center can arrange referrals and transportation to doctors' offices and hospitals within 45 minutes of campus. A Health Administration fee is assessed to all full-time students.

Student Health Insurance

A copy of the student medical insurance plan is available through the Office of Student Financial Services or the Wellness Center. The plan is mandatory and students are billed for this coverage.

The premium is subject to final determination by the College's insurance carrier. If the student is adequately covered under a current policy, New England College insurance coverage can be waived by completing the online waiver at www.studentplanscenter.com prior to the start of the fall semester. However, College policy requires that all international students be covered under the New England College plan. This coverage cannot be waived. The College highly recommends that all students participating in Club Sports carry this insurance coverage. Any questions regarding health matters should be addressed to the Director of Health and Counseling Services.

Summary of College Expenses

Basic expenses for students at New England College during the 2016-2017 academic year are:

Tuition \$34,984

Student Services Fee \$968

Room (Shared) \$6,120

Board (19 Meal Plan) \$7,416

Health Insurance \$1,550

Estimated Total \$51,038

Financial Reserve Charge

Included in the enrollment deposit is a one-time financial reserve charge. This reserve will be returned, less any outstanding charges, upon graduation or official withdrawal from the College. An official withdrawal requires both written notification of withdrawal and completion of a withdrawal interview.

Other Fees

Breach of housing and/or meal contract: \$1,500

Graduation Fee: \$150

Identification Card: \$25 (*first replacement*)

Improper Checkout: \$25

Late Payment Fee: \$200

Life Safety Tampering Fee: \$150

Tampering with, disabling or otherwise misusing life safety equipment (smoke detectors, fire extinguishers, sprinkler heads, door locks, etc.) will result in an automatic charge of \$150 plus the costs of repair. This charge will be assessed against a residence hall if the perpetrator is unknown. In the case of an individual student, this charge will be over and above any fines levied through the College judicial system.

Official Transcript: No charge

Replacement Diploma Fee: \$35

Returned Check Fee: \$50

Study Abroad/Away Application Fee: \$250

(\$50 non-refundable)

Parking Permit, per year: \$75

Payment Schedule

During the year, payments for tuition, room and board are due in accordance with the following schedule:

Fall Semester

A deposit of \$200 is due no later than May 1 to hold academic space for returning students for the fall semester. This payment is refundable up to May 1. Fall semester charges are due on or before July 15. This payment is refundable up to the day before fall classes begin.

Spring Semester

Spring semester charges are due on or before December 15. Payments are refundable up to the day before spring classes begin.

January and Summer Terms

January and Summer term charges are due prior to the start of the term.

Payment Policy

Students are required to remit payment in U.S. dollars. Checks are to be made payable to New England College and checks must be drawn on U.S. banks. Exceptions can be reviewed and approved on a case-by-case basis. If approved, bank processing fees on foreign checks will be added to the student's account. Processing charges may be avoided by remitting payment in the form of international money orders. New England College also accepts payment using Master

Card, VISA, Discover, and American Express. Additionally, you may remit payment by electronic funds transfer or wire transfer. International payments may be made online at www.nec.flywire.com.

New England College is pleased to offer the convenience of online payments. Students can pay online with credit card or electronic check through their MYNEC account. Students can authorize designated payers access to their online student accounts through their MYNEC link. If you are an authorized payee, you can submit online payments at: https://quikpayasp.com/nec/student_account/authorized.do.

If you prefer to mail your payment, please send mail to:

*New England College
Office of Student Financial Services
98 Bridge Street
Henniker, NH 03242
Telephone: 603.428.2226
Fax: 603.428.2404*

Arrears

Neither transcripts nor diplomas will be issued to any student whose account is in arrears. Students who are in arrears will not be allowed to participate in their Commencement ceremony. All accounts 30 days or more in arrears are subject to a late payment charge of 1.5 percent per month, equivalent to 19.56 percent annual percentage rate. Overdue accounts referred to a collection agency will incur the agency's fee. This fee, usually 25 to 50 percent, will be added to the overdue balance at the time of assignment to an agency.

Defaulted Loans

Transcripts and diplomas are not released to any student in default on Perkins Loans.

Payment Plans

New England College offers an interest-free monthly payment plan administered by Tuition Management Systems (TMS). Applications should be submitted directly to TMS by July 15 for the 10-pay plan that runs July 1 - April 1 or the 5-pay plan that runs July 1- November 1. If you are using the 5-pay plan only for the spring semester, you must sign up by December 15.

1.888.437.3430

Refunds for Withdrawal, Suspension or Dismissal

If an undergraduate student withdraws or is dismissed from school during the academic year a refund or credit for tuition and board will be issued according to the following schedule:

- *During the first week of the semester: 75%*
- *During the second week of the semester: 65%*
- *During the third week of the semester: 55%*
- *During the fourth week of the semester: 40%*
- *After the fourth week of the semester: 0%*

All other charges are non-refundable for any semester from which a student withdraws. For Summer term and January term programs the refund or credit will be issued according to the following schedule:

- *As of the first day of the first week: 80%*
- *As of the first day of the second week: 50%*
- *After the second week: 0%*

All other charges are non-refundable. If there is an outstanding balance after the credit is applied, the amount outstanding is due within 10 days of the official date of withdrawal, suspension, or dismissal. The official date of withdrawal is the date on which the Office of the Dean of Students receives written notification from the student, parent or guardian. The date of suspension or dismissal is the day specified in the letter from the VPAA notifying the student of his/her suspension or dismissal.

See section on the School of Graduate and Professional Studies for details on the withdrawal and refund policies for graduate programs.

Personal Expenses and Check-Cashing

Personal expenses, including books and supplies, clothing, laundry, travel, and recreation will vary from student to student. Each student should plan personal expense requirements and develop a budget based upon those requirements. The Office of Student Financial Services can assist in developing this annual cost of attendance.

Students should consider establishing a checking account at a local bank in order to pay for books, supplies, and other personal expenses. The Office of Student Financial Services does not cash personal checks for students.

Master Card, VISA, Discover, and American Express may be used to charge purchases in the bookstore. Gift certificates are available at the bookstore and may be used toward bookstore purchases. Please see the bookstore manager for information, or call 603.428.2220. An ATM is available in the Simon Center.

Financial Assistance

Telephone: 603.428.2226

email: sfs@nec.edu

The Office of Student Financial Services at New England College provides personal attention with billing and financial assistance matters to students and parents from the time of initial inquiry through the completion of his/her studies.

Need Determination

Financial need is the difference between the total cost of education and the amount of money the student and family can contribute to meet these expenses, as calculated by Federal and Institutional guidelines. Financial need is related to the cost of education; a family with a comparatively high standard of living may demonstrate financial need if the student is attending a private college as opposed to a low-cost public college. Special family circumstances may also be considered in determining the level of assistance offered and should be brought to the attention of the Office of Student Financial Services.

Expected Family Contribution

Parents are expected to contribute to the cost of a student's education, taking into consideration their income, assets, number of dependents, and other relevant information. Students are expected to contribute from summer earnings, savings, and by borrowing against future earnings when appropriate.

Types of Financial Assistance Available

New England College awards financial assistance in the form of scholarships, grants, loans, and work opportunities. Students applying for financial aid are considered for all programs for which they are eligible, and the financial aid award is a combination of scholarship or grant, loan, and work opportunity depending on need. The actual aid award for each student depends upon the respective level of financial need and annual allocations of federal, state, and college funds as well as the timely completion of the aid application, so please adhere to the established priority deadlines.

Satisfactory Academic Progress

Satisfactory Academic Progress is required by federal law (34 CFR 668.34) to measure a student's completion of coursework toward a degree. The Student Financial Services Office monitors the progress of each student to determine if the student meets federal guidelines for receiving financial aid. Students must make both quantitative (pace) and qualitative (GPA) progress toward their program each semester to receive financial aid. Students who do not maintain the minimum standards for grade point average and pace of progression may lose their eligibility for federal, state and/or institutional financial aid. Academic progress will be measured at the end of each payment period. Interim terms (J-Term, Summer) are evaluated with the following payment period.

All financial aid applicants are subject to the satisfactory academic standards whether or not they have received financial aid previously.

Students must maintain a Cumulative Grade Point Average (GPA) as per the chart below.

Credits attempted	Minimum GPA requirement
0-18	1.30
19-32	1.50
33-48	1.70
49-68	1.80
69-+	2.00

Grades of I, P, NR, AU, ADW, ADI, W, T and WD are not used in grade point calculations. Please refer to the College catalog for the complete grading system. Students may receive financial aid for repeating a previously passed course once or a failed course until it is passed. The higher grade for the repeated course is used in the grade point average calculation.

Students must complete a percentage of credits attempted as per the chart below.

Credits attempted	Minimum credits earned as a percent of credits attempted
0-18	0%
19-32	30%

33-48	45%
49-68	56%
69-+	67%

Transfer credits earned at other institutions and accepted by New England College are included as credits attempted & earned.

The minimum credit hours required to receive an undergraduate degree is 120 credits. Undergraduate students must not exceed 180 attempted credit hours in order to remain eligible for financial aid.

Financial Aid Warning and Termination

Students who fail to meet the satisfactory academic progress standards will be placed on one semester of financial aid warning. During the financial aid warning semester, students are permitted to receive financial aid. Students who meet the satisfactory academic progress at the end of the warning semester will return to good standing. Students who fail to meet the standards at the end of the warning semester will be placed on financial aid termination and will be ineligible to receive financial aid. Students on termination must pay educational expenses from personal funds.

Appeals

Students failing to meet Satisfactory Academic Progress due to extenuating circumstances may appeal the termination. Extenuating circumstances may include: prolonged illness/death of an immediate family member, medical illness that created hardship to the student, military activation, change in educational objective, documented learning disability, or other acts beyond control of the student. Students must submit a complete Satisfactory Academic Progress Appeal form to the Student Financial Services Office within 14 days of notification of termination. Students must attach all necessary supporting documentation such as doctor's notes, accident reports, etc. Appeals will be reviewed within 14 days of receipt. Incomplete appeal forms or missing supporting documentation not received within the 14 day time-frame will result in a denied appeal. Decisions regarding appeals will be made in writing to the student. If an appeal is approved, the student will be either placed on a semester of financial aid probation or on a specific academic plan. If the student is on a semester of financial aid probation, they will be eligible to receive financial aid during the probationary semester and must meet Satisfactory Academic Progress by the end of that semester to remain eligible for financial aid. Students on an academic plan must meet the terms of the plan for the duration of the academic plan to remain eligible for financial aid. Students requesting reinstatement of financial aid should submit a

request to the Student Financial Services Office once they have met the Satisfactory Academic Progress standards.

Financial Aid Programs

New England College participates in the following financial aid programs:

Federal Pell Grants

A Federal Pell Grant is a federally administered program that awards grants to undergraduate students seeking their first baccalaureate degree. It is awarded on the basis of exceptional financial need. All undergraduate financial aid applicants are required to apply for a Pell Grant by completing the Free Application for Federal Student Aid (FAFSA).

Supplemental Education Opportunity Grants

A Federal Supplemental Education Opportunity Grant (FSEOG) is a federal grant administered by New England College. FSEOG is awarded to undergraduate students demonstrating exceptional financial need. In compliance with federal regulations, priority in awarding is given to students that are Federal Pell Grant recipients.

State Student Incentive Grants

State grants are administered by the state in which the student resides. Each state stipulates its own eligibility criteria. Each student is responsible to meet state application guidelines.

Federal Perkins Loans

A Federal Perkins Loan is a 5%, simple interest loan administered by New England College. It is awarded to students with exceptional financial need. Recipients must sign a Promissory Note. The cumulative loan limit for undergraduate students is \$20,000 with no more than \$4,000 awarded in any given academic year. Repayment begins 9 months after graduation (or when the student is no longer enrolled on at least a half-time basis). Students are normally allowed up to 10 years to repay. Entrance interviews are required for first-time borrowers. For more information on Perkins loans, visit www.studentaid.ed.gov.

New England College Grants

New England College offers a limited number of need-based grants for undergraduate students. Students must have a complete financial assistance application on file and have demonstrated need in order to be considered for these grants. Students must maintain satisfactory academic

progress and must not be placed on social probation for the grants to be renewed. Students who drop below full-time status will not be eligible for NEC Grant consideration.

Federal Direct Subsidized Loans

A Federal Direct Subsidized Loan is a low interest, federally subsidized loan awarded on the basis of need. To apply, students should complete the Free Application for Federal Student Aid at www.fafsa.ed.gov. If the first disbursement of the subsidized loan is between July 1, 2016 and June 30, 2017, the interest rate on the loan is fixed at 4.66%.

Repayment normally begins 6 months after the student graduates or enrolls for less than half time. Depending on need and course load, first-year students may borrow up to \$3,500, sophomores may borrow up to \$4,500, and juniors and seniors may borrow up to \$5,500 each year. The total amount in Federal Direct Subsidized Loans a student may borrow as an undergraduate is \$23,000.

Following graduation, students may be eligible to consolidate their federal loans or repay them on a graduated basis tied to student income. For more information on Direct Loans, visit www.studentloans.gov.

Federal Direct Unsubsidized Loans

A Federal Direct Unsubsidized Loan is insured by the government. It provides an opportunity for students to benefit from the low interest of the Federal Direct Loan Program when they are not eligible for a subsidized loan or are eligible for less than the maximum annual limit due to federal financial need requirements. All provisions of the Federal Direct Loan apply, except that students are responsible for paying the interest on the loan that accrues while the student is enrolled. Undergraduate dependent first-year students may borrow up to \$3,500, sophomores may borrow up to \$4,500, and juniors and seniors may borrow up to \$5,500 each year. The total amount in Federal Unsubsidized Loans a student may borrow as a dependent undergraduate is \$23,000. Undergraduate independent first-year students may borrow up to \$7,500, sophomores may borrow up to \$8,500, and juniors and seniors may borrow up to \$10,500 each year. The total amount in Federal Direct Unsubsidized Loans a student may borrow as an independent undergraduate is \$46,000. Graduate students may borrow up to \$20,500 per year with an aggregate total of all Federal Direct Loans of \$138,500. For more information on Direct Unsubsidized Loans, visit www.studentloans.gov.

Federal Work-Study

The Federal College Work-Study Program is a federally funded student employment program. Students are placed in various campus offices and receive a paycheck for hours worked.

Eligibility is based on need and the timely submission of the FAFSA. A student's earnings under the Federal College Work-Study Program are paid every two weeks via direct deposit to the student's bank.

Federal Direct PLUS

The Parent Loan for Undergraduate Students (PLUS) is an additional loan that may be borrowed toward the cost of education. The PLUS is a federal loan for parents of dependent students enrolled at least half time. Parents without adverse credit history may borrow up to the difference between the cost of education and any other forms of expected financial assistance. The interest rate for the Direct PLUS loan is 6.31%. The disbursement fee for these loans is 4.272%. Repayment of PLUS loans begins 60 days after the loan is fully disbursed however an in-school deferment option is available. For more information on PLUS loans visit www.studentloans.gov.

Private Student Loans

We strongly encourages the pursuit of all state, federal, and institutional aid available first in financing a New England College education. If additional financing is needed after exhausting these sources or if a student does not qualify for federal loans there are several lenders who offer alternative/private education loans. The terms and conditions of private loans may be less favorable than federal loans. Approvals of private loans are typically based on credit rating and debt-to-income ratio and may require a co-signer.

New England College does not maintain a preferred lender list. A list representing the private lender programs used by our students during the previous school year is available through Student Financial Services. New England College will process your financing options from any participating lender program.

We encourage thorough research of lenders to ensure the best rates and services are received. Comparison of borrower benefits ranging from origination and default fees that can reduce the initial cost of the loan as well as benefits to save money during repayment such as auto-debit interest rate reductions should be reviewed. Interest rates are typically variable, which means they can change monthly and rates vary amongst private lenders. For current Prime and London Interbank Offered Rate (LIBOR) information, please go to www.bankrate.com.

Other Opportunities

Private foundations and organizations offer programs to help meet the cost of post-secondary education. Students are encouraged to contact such organizations directly to inquire about available programs. The Office of Student Financial Services has a scholarship resource library

available for students to use while visiting the office. In addition, scholarship information may be accessed online at www.finaid.org.

Tuition Prepayment Plan

The Tuition Prepayment Plan is offered to New England College students and families to prepay up to four years of undergraduate tuition. It is available to students and their parents who are not receiving institutional scholarship/grant assistance and exempts the student from future tuition increases. Room and board and other College charges will be subject to annual increases. Contact the Office of Student Financial Services for further details.

Applying for Financial Aid

New Students

For those who wish to apply for need-based financial assistance, first-year and transfer students are strongly encouraged to apply for financial assistance concurrently when applying for admission. Offers of financial aid are made only after a student is accepted for admission and the Student Financial Services Office has received all required documentation. Students who are U.S. citizens or permanent residents (with permanent resident card) may apply for financial assistance by submitting a Free Application for Federal Student Aid (FAFSA). New England College's code for the FAFSA application is 002579. International students apply by completing the CSS Financial Aid Profile at student.collegeboard.org/css-financial-aid-profile

Students are encouraged to apply for aid as early as possible while applying for admission. Students may file the FAFSA online at www.fafsa.ed.gov after October 1 of the New Year for students entering that upcoming Fall semester. For complete filing instructions, please go to www.nec.edu/admission/financial-aid.

A financial aid award letter will be sent to notify students regarding the financial aid award offer as well as provide information about award components.

Please note that the priority filing deadline for financial assistance is March 1. If in a given year March 1 is a Saturday or Sunday, then the priority deadline will be the following business day.

Returning Students

All students must reapply for financial aid each academic year by filing the FAFSA as well as providing other requested documentation.

Please note that the priority filing deadline for financial assistance for returning students is March 1. If in a given year March 1 is a Saturday or Sunday, then the priority deadline will be the following business day.

Student Accounts

If all required documents have been received and verified, financial aid awards are credited directly to the student's account at the beginning of each semester after the add/drop period. If a student's account with the College is paid in full and has a credit balance, the student may request a credit refund to cover other educational costs such as books and supplies or off-campus living expenses. Requests should be made in writing to the Office of Student Financial Services or by email to sfs@nec.edu. If you plan to use your refund to help pay for off campus expenses, please plan to cover the first two months of each semester on your own to account for any delays in receiving funds from federal, state or other outside sources.

Refund Procedure

If a student officially withdraws during a semester, a portion of any refund calculated under the College's withdrawal policy will be returned to federal, state and College programs. Details of this policy are available online and through the Office of Student Financial Services.

External Resources

All students are encouraged to pursue scholarship programs available through service clubs, church groups, and businesses located in their hometowns. In addition, many students and parents qualify for tuition assistance through employment benefits, military service, or state social agencies. Students are expected to inform the Office of Student Financial Services of any external grant or scholarship, or resource assistance. In most instances, these external grants will help meet a greater portion of financial need and reduce the loan portion of the aid package. External resources will be reviewed on a case by case basis to ensure each student does not exceed institutional and/or federal need calculations.

Merit-based Scholarships

Merit-based scholarships are awarded to New England College's undergraduate students based on the following criteria:

- *a student must maintain Satisfactory Academic Progress*
- *students receiving NEC scholarships may not be placed on any kind of academic or social probation*

- *students who move off campus will have their scholarships reduced by a prorated amount;*
- *scholarships to students who do not maintain full-time status will be prorated according to the student's course load; and*
- *scholarships to students who do not maintain half-time status will be eliminated.*

Incoming students are automatically reviewed for scholarship eligibility and awards are generally renewable on an annual basis.

Restrictions to Institutional Awards

Students receiving any form of tuition remission to attend New England College are not eligible to receive any institutional scholarship. NEC Plus students are not eligible to receive merit based awards as they are already attending at a substantially discounted rate. Students are not eligible for more than one New England College scholarship.

Presidential Scholarship

New England College's most prestigious award, the Presidential Scholarship, is awarded to students with high school GPAs of 3.5 or higher.

Alta Petenda Scholarship

This scholarship is awarded to students with high school GPAs of 3.0 to 3.49.

New England Scholarship

This scholarship is awarded to students with high school GPAs of 2.5 to 2.99, who also indicate strong potential for achievement based upon academic or co-curricular accomplishments.

Academic Opportunity Scholarship

This scholarship is awarded to students with high school GPAs of 2.0-2.49.

Alumni Legacy Scholarship

This scholarship is awarded to those students who are children or grandchildren of NEC graduates.

John Stark Scholarship

Students graduating from John Stark Regional High School in Weare, NH are automatically awarded the John Stark Scholarship provided they have been accepted for admission to New England College. This scholarship provides half priced tuition each year.

Henniker Area Scholarship

Students graduating from Hillsboro-Deering High School, Hopkinton High School, and Kearsarge Regional High School are automatically awarded the Henniker Area Scholarship upon acceptance to New England College. This scholarship provides half priced tuition each year.

Endowed Scholarships

New England College students will be considered for a range of merit- and need-based endowed scholarships

Community College to NEC Scholarship

(CC2NEC)

The CC2NEC program offers four full-tuition scholarship each year to qualified students. Learn more at <http://www.nec.edu/admission/undergraduate-programs/transfer-students/cc2nec/>.

Transfer Scholarship

This scholarship is awarded to students who are transferring from one educational institutions with a minimum GPA of 2.0.

Student Development

Telephone: 603.428.2241

The Student Development Division is comprised of the offices of the Dean of Students, Associate Dean of Students and International Programs, Campus Safety, Residence Life and Housing, Student Engagement, Student Involvement, First- Year Programs, Diversity and Inclusion, Student Conduct, Career and Life Planning, and the Wellness Center. Student Development works collaboratively and across campus to provide services and experiences that foster personal growth and engaged citizenship.

Career & Life Planning (CLP)

Telephone: 603.428.2358

With the help of the CLP team, students can develop career and life plans consistent with their skills, interest, values and personal characteristics; acquire skills by engaging in internships, service activities, and study abroad; demonstrate the results of their experiences in and out of the classroom and effectively present themselves, and; make connections in the world of work and further study.

As part of Student Development, Career and Life Planning works with the entire College community in order to accomplish its mission. CLP actively engages students and ensures students access to services in the following areas, consistent with their interests and abilities:

- Career development, choice of major and interest "testing"
- Resume and interview preparation, the job search and employer contact
- Internships
- Study abroad
- Community service work-study
- Graduate school application and acceptance

Career & Life Planning is open from 8:30 a.m. - 5:00 p.m. every day.

Residential Life and Housing

Telephone: 603.428.2242

Mission

Residential Life and Housing strives to create a living environment that supports the growth and development of all residents in a community characterized by mutual respect and an appreciation for diversity.

As a residential college, New England College considers the experience of living on campus to be an extension of the learning that occurs in the classroom. The College believes that living on campus is an essential experience designed to help students develop lifelong skills such as problem solving and critical thinking, both which lead to a sense of self and purpose. Residential students are expected to actively participate in all of the programs and community activities planned by the Residential Life staff.

A listing of College housing policies are contained in the Student Handbook, *The Compass*, which can be found on-line. The residence halls at NEC are for registered, full-time, undergraduate and graduate NEC students. As a residential College, NEC requires all undergraduate students to live in College owned residential facilities for at least three academic years and/or 6 academic semesters. A student who is 23 years of age or older by August 1 of the

upcoming academic year, veteran status, married, civil-unioned, has a child/children, lives with a parent or guardian who has a permanent address within pre-approved commuter town, or who has a previously approved medical accommodation or financial hardship may be exempt from the housing requirement. Exemptions for financial or medical reasons require documentation and must be made through the Director of Student Financial Services or the Director of Disability Services. All housing contracts are binding agreements made for the entire academic year. Students are subject to meal plan requirements based on their academic year at NEC.

Returning students who are required to fulfill their residency requirement for the following academic year and who do not select a room and meal plan during the room selection process will be assigned an on-campus room and a 15-meal plan and charged accordingly. New students who are required to live on campus who do not submit a housing and meal plan contract will be assigned a room and a 19-meal plan and charged accordingly. Students who choose not to occupy their assigned room will be charged for the full cost of their room based on the above stated requirements. Likewise, students who choose not to use their meal plan will be charged for the full cost of the meal plan based on the above stated requirements. Please contact Residential Life and Housing for more information regarding our housing and meal plan policies.

Prior to moving in to their assigned room, all students will be required to sign Housing and Meal Plan contracts. Failure to sign a housing or meal plan contract does not absolve a student of the rights and responsibilities associated with the spirit of the contract or the stated living requirements.

Commuter Students

Although New England College is primarily a residential campus, some students live in off campus apartments or at home. Commuting Students are considered a vital part of the New England College community and are encouraged to participate in all services and programs available to residential students.

Wellness Center

Telephone: 603.428.2253

The Wellness Center, located in Hill House, is dedicated to the physical and emotional well being of NEC students, as well as the greater NEC community. Our services focus on the education, promotion, and maintenance of physical and psychological well-being of all regularly enrolled undergraduate students. Our health services are staffed by nurse practitioners and registered nurses. Our counseling staff is comprised of licensed mental health counselors, as well as a psychiatric nurse practitioner.

Mental health counseling services provide students with the opportunity to talk with a counselor in a confidential setting. The mental health staff is available to students for individual and/or couples counseling.

Medical evaluation and health education is available on a wide range of health issues including smoking, alcohol, nutrition, contraception, pregnancy, and sexually transmitted diseases. The Health Care Services provides care for acute illnesses as well as routine primary care including women's health, STD and pregnancy testing as well as physical exams. Should a student need a prescription while at school, our nurse practitioners are able to write prescriptions for students as indicated. Documentation from the home primary care provider may be required for certain prescriptions. Our services also include laboratory testing. Referrals to outside specialists can be facilitated through the Wellness Center for students with pre-existing or chronic health issues that require close monitoring.

The Wellness Center hours are Monday through Friday 8:30 a.m. - 4:30 p.m. There is emergency care located at Concord Hospital as well as non-emergency care at Horseshoe Pond Urgent Care in Concord during off-hours.

Student Engagement

Phone: 603.428.2429

The Office of Student Engagement, or the OSEI, serves as the main office for student events and programs on campus. Incorporating Student Organizations, Leadership Development, Student Senate, Student Entertainment Committee, Shuttle Services, New Student Orientation, Greek Life, the Charter Coffeehouse, Experiential Wednesdays, and major campus programming and traditions, the OSEI focuses on getting students involved on campus. With a wide range of activities, programs, and organizations to serve the varied interests of the campus community, the OSEI is an integral part of student life at New England College. With most activities having been planned, promoted and produced by NEC students, there is bound to be something that sparks your interest. If not, we will be more than happy to work with you to bring something that will.

Greek Life

Fraternities and sororities have been an active and vital part of New England College for many years. Greek organizations represent a wide diversity of students and opportunities. Greeks are involved in all aspects of campus academics, service, and social activities. Greek students write honors theses, serve on the NEC Student Senate, Student Entertainment Committee, participate in athletics, and tutor local school children through philanthropic activities. Greek affiliation is a unique chance to be involved with a strong, continuous community over one's college career - all

the while actively engaging in many other campus experiences. Unlike many other college campuses, "being Greek" is just one aspect of a NEC student's experience. Membership in fraternities and sororities is open by invitation to those undergraduate students meeting the necessary qualifications.

Councils, Boards, and Governing Groups

The Student Senate is the student legislative body on campus responsible for promoting the welfare and interests of students and fostering open communication between students and the College's administration. Elected by the student body, the Senate is a clearinghouse for student views, opinions, and interests. The Student Senate allocates and monitors funds to student clubs and organizations.

The Student Entertainment Committee (SEC)

The Student Entertainment Committee (SEC) is responsible for coordinating and scheduling events that draw much student interest, including special events, films, lectures, small concerts, and social programs for the community. Each of these areas is coordinated by student volunteers. SEC membership is open to any student who wants to be involved in co-curricular program planning.

Student Organizations

The following is a sampling of student organizations. The exact number and variety of organizations vary from year to year.

Adventure Bound

Adventure Bound offers vigorous outdoor learning opportunities in the form of workshops and weekend trips. All members of the College community are welcome to participate. Past trips have included backpacking, rock climbing, kayaking, and urban adventures. Rental equipment (such as backpacks, tents, cross-country skis, snowshoes, and sleeping bags) is also available for students to use.

Aspiring Minds

Aspiring Minds formed to provide support for students in the NEC community who care deeply about issues of diversity. Members plan social events and educational events such as lectures, films, and more. Aspiring Minds welcomes anyone to join and participate.

Carriage Theatre Ensemble

Students who are interested in theatre may wish to join the Carriage Theatre Ensemble. Each semester performances are staged in the Main stage and Studio Theatres. Scripts are selected to provide students with a broad perspective and experience in acting, costumes, scenery, lighting, and production.

College Democrats/College Republicans

The College Republicans and College Democrats each offer students opportunities to learn about and take action connected to our two major political parties. Each club is open to all students, and sponsors events and programs about politics and issues germane to their respective parties.

Environmental Action Committee (EAC)

The Environmental Action Committee brings environmental, conservation, and energy issues into focus for the community. By sponsoring events such as films, lectures, recycling programs, and town clean-ups, the EAC enables students to become actively involved with the community and nature.

International Student Association (ISA)

Composed of students from around the world, the International Student Association works to increase awareness and appreciation of various cultures and customs within the College community. The association sponsors such activities as International Week, teas, and the annual international dinner and dance.

New England College Role Playing Association (NECRA)

Through the use of role-oriented games and exercises, the New England College Role Playing Association offers students the opportunity to exercise their imaginations and expand their creative energies.

Political Science Club

The Political Science Club plays a vital role on campus through hosting debates, presidential candidates, lectures, and political parties. The Political Science Club also sponsors many events on campus throughout the year for all members of the NEC community, and is open for all students to join.

New England College Queer Straight Alliance

NEC Queer Straight Alliance (QSA) offers an opportunity for gay, lesbian, bisexual, transgendered, and questioning students to provide support for each other, plan events and programs, and advocate for GLBT issues on the NEC campus. The group is open to all students, and welcomes ally students as an integral part of the club. NEC QSA has sponsored events on National Coming Out Day and has held events such as the "Day of Silence," speakers, and drag shows.

Student Athlete Advisory Council (SAAC)

The Student Athlete Advisory Council is comprised of the leaders of varsity athletic teams. These students represent all student athletes on campus and provide leadership for students in fostering positive involvement with regard to athletic events.

Student Senate

The Student Congress is a group of students who represent the student body as student senators and the executive board. This organization consists of two parts: Student Senate and the House of Representatives. House of Representatives consists of a liaison from each student organization on campus and each senator in Student Senate represents a part of the student body.

The Henniker Review

The Henniker Review is an annual literary review edited by students; contributors to *The Henniker Review* include students, faculty, staff, and others from the community at large.

The New Englander

The New Englander, the New England College student newspaper, provides experiential learning for students interested in writing, editing, design, photography, public relations, and advertising. Students also gain professional experience working together as a group, formulating strategy for improving quality, and meeting deadlines. The goal is to produce a high quality newspaper that serves the needs of the New England College and Henniker communities. Students derive deep satisfaction from meeting this goal, typically by hard work, overcoming problems, and having plenty of fun. Students may treat the *New Englander* like a club, participating through agreement with the faculty advisor, or earn variable credits through the *New Englander* course.

T.E.A.C.H.

T.E.A.C.H. is an organization made up of members who are interested in the field of education and making a difference through providing opportunities and support for students, young and old. Because we are an education based organization, our goal is to not only work with schools

in the community and in places of need, but to help teach the college community about embracing diversity, so all students may have an open heart and mind about our ever changing culture, and be accepted and thus become more successful learners, and eventually leaders.

WNEC Radio

WNEC 91.7 FM is an opportunity for students to have internships, join the club, serve as a DJ on the radio, or help out a student organizations events on campus by playing music. The station is broadcast and staffed by students from all majors on campus.

Other Leadership Opportunities

In addition to the many clubs and organizations on campus, several additional leadership positions are available to students in an effort to assist the community, gain valuable skills and experience, and enhance the quality of life. Such leadership positions include:

- *Student organization executive board member*
- *Judicial Board Member*
- *Peer Leader*

Athletics Mission Statement

Together, we thrive on pride, integrity, and respect.

Intercollegiate Athletics

New England College is a member of the National Collegiate Athletic Association (NCAA, Division III), the North Atlantic Conference (NAC) and the New England Hockey Conference (NEHC)

New England College sponsors varsity competition in men's and women's soccer, field hockey, men's and women's cross country, women's volleyball, men's and women's basketball, men's and women's ice hockey, men's and women's alpine skiing, men's and women's lacrosse, softball, and baseball. Our teams are highly successful, with a long tradition of making the playoffs and representing NEC with pride.

New England College's major intercollegiate contests are played against such traditional opponents as Salem State University, Norwich, St. Anselm, Keene State, and Plymouth State University. NAC competitors in soccer, basketball, volleyball, baseball, softball, cross country, and lacrosse include: Colby-Sawyer, Lyndon State College, Johnson State College, Green Mountain College, Castleton University, Husson University, Maine Maritime Academy, Thomas College, and the University of Maine-Farmington. Alpine ski competes in the MacConnell Division of the Eastern Collegiate Ski Conference.

Facilities

New England College provides a turf field, gymnasium, 26 acres of athletic fields, tennis courts, and an AstroTurf® floored field house. Alpine skiers may ski at Pats Peak Ski Area (less than two miles away) at no cost and there are 30 kilometers of cross-country and biking trails located on the Henniker campus. Ice hockey is played at the College's Lee Clement Arena. A fitness center is located on campus in the lower level of Bridges Gymnasium. The Lee Clement Arena and Bridges Gymnasium house the offices of the Director of Athletics, coaches, and athletic trainers.

Recreational Sports

Recreational sports are an integral part of New England College. All members of the College community are invited to participate. Flag football, basketball, volleyball, and softball have been offered as team competitions. Individual sports such as tennis are also offered.

Academic Affairs and Student Engagement

Office of the Vice President of Academic Affairs

Telephone: 603.428.2235

The Office of the Vice President of Academic Affairs (VPAA) is responsible for creating and maintaining a dynamic learning environment for undergraduate, graduate, and continuing education students at New England College. Specific areas of responsibility include designing and implementing academic policy and programs, hiring and evaluating faculty, integrating new learning technologies, and monitoring student academic progress. The Office of the VPAA oversees the undergraduate and graduate divisions, the School of Graduate and Professional Studies, the NEC Gallery, the H. Raymond Danforth Library, the Registrar's Office, the Pathways Academic Success Center (Academic Advising, ConNEctions, PASS, Tutoring, Disability Services, and Mentoring), and the Centers for Engaged Learning and Civic Engagement. As well, the Office of the VPAA also supports student learning and achievement. Responsibilities include developing and implementing policies related to campus life, promoting co-curricular programming, and providing student services which enhance the NEC learning environment.

Center for Community Engagement and Leadership

cce1@nec.edu

Co-Directors:

Wayne Lesperance, Interim Dean of Undergraduate Programs & Professor of Political Science

Inez McDermott, Professor of Art History

The Center for Community Engagement and Leadership focuses on promoting and encouraging engaged and experiential learning by providing opportunities and serving as a resource for students, faculty and community members to work together in and out of the classroom.

A major initiative for the CCEL is the work done by the Center for Civic Engagement and Project Pericles (see descriptions below). In addition, the CCEL works closely with the Office of Career and Life Planning, the Office of Student Involvement, the First-Year program, and the

Concord Center, as well as with individual faculty planning study away and service learning trips.

The Center for Civic Engagement

The Center for Civic Engagement focuses on broadening and deepening traditional civic engagement through *Town Hall Series* which organizes and hosts U.S. presidential candidates, campaign leaders and elected officials, *Speaker Series* which hosts a variety of high profile speakers as well as election debates, and, to coincide with the presidential primary, *College Convention*, in which college students from across the country meet for a week and enjoy access to presidential candidates, campaign staff, political experts and media. *CiviCorps* also provides an opportunity for students to take an active role and organizing and supporting the Center's civic engagement activities.

Project Pericles

Project Pericles is a national organization committed to civic and social engagement based on knowledge of the principles and history of American democracy. As one of the ten founding Colleges, New England College is proud to be associated with this project and with the founder, Eugene Lang. NEC's Pericles program has two essential aspects - a theoretical, knowledge-based aspect, and a civic engagement aspect, in which students become personally involved in civic and socially responsible service.

Community Service

The Offices of Student Involvement and Career & Life Planning offer a variety of volunteer service placements in the local communities. These placements include opportunities in public schools, a private school for challenging teens, after-school programs, a daycare center, a senior center, a public library, a teen center and an equine therapy center, among others. Volunteering in the community not only helps those in need, but enables NEC student volunteers to acquire additional skills and a sense of confidence. With approval of a sponsoring faculty member, volunteer work can be undertaken for academic credit as an internship. Under Federal Work Study regulations, students with work-study funds as part of their financial aid package can also be paid for working in the community.

Pathways

Pathways-Academic Success Services

Simon Center, 4th floor

Telephone: 603.428.2218

Since its founding in 1946, New England College has emphasized its small classes and its student-centered education. Pathways-Academic Success Services provides NEC students with comprehensive academic support services that focus on individualized student attention and meaningful academic support. The Pathways Center (located on the 4th level of the Simon Center) is the central hub of our services and houses Academic Advising and the Registrar's Office. Additional supports located throughout campus include Tutoring Center (located on the second floor of the Danforth Library), Mentoring (Lewin House), Career and Life Planning (Lewin House) and Disability Services Office (Located in CEI),and First Year Programs (Simon Center). Pathways-Academic Success Services provides a wealth of support options that assists students in their quest to become independent, motivated and successful learners.

Pathways - Advising

Telephone: 603.428.2929

Students wishing to improve their ability to be academically successful during their collegiate experience can receive supporting instruction through the Academic Advising Office. Advising staff can provide course requirements needed for graduation, help students track their progress, discuss academic policies, as well as connect students with appropriate campus resources. Students having academic difficulties are encouraged to meet with the advising staff to develop a plan to achieve academic success.

Pathways: PASS

(Positive Academic Support System)

Telephone: 603.428.2247

PASS provides guidance and support to students who have been placed on academic probation. Students in the program meet with a member of the Pathways team on a weekly basis and are encouraged to take advantage of support services available on campus. Additionally, PASS offers programs including the PATH 1010: *Transitions to Academic Success* course.

Pathways: Mentoring Program

(Located in Lewin House)

Telephone: 603.428.2247

The Mentoring Program is designed to facilitate reaching academic and personal goals. Through their relationship with a professional Academic Mentor, students gain the academic skills and confidence to achieve inside and outside the classroom. Mentoring is intentional and tailored to individual needs. Mentoring includes multiple scheduled meetings, systematic communication with faculty and staff, and engagement with families.

Students who thrive in Mentoring are interested in academic success, managing time and staying organized. Mentors encourage students toward thoughtful, intentional actions and decision making. Enrollment in the Program requires an additional fee.

Pathways: First-Year Programming Office

Telephone: 603.428.2931

The First-Year Program aims to support the academic and social integration of first-year students within the New England College community. Emphasis is placed on assisting new students in their transition to college, while also promoting independence, confidence, and active engagement in campus life. This goal is accomplished primarily through the first-year seminar, *Bridges to Learning*. Seminars are taught by a professional staff or faculty member and a Peer Leader. Together, they support new students as they become engaged members of the NEC community.

Pathways - Tutoring Center

(located at the H. Raymond Danforth Library)

Telephone: 603.428.2276

As part of Pathways' commitment to student academic success, the Tutoring Center provides academic tutoring services, free of charge, to *all* student populations of New England College in a welcoming and supportive environment. The Tutoring Center is located on the second floor of the H. Raymond Danforth Library and provides a variety of academic services including professional and peer-tutoring programs. Professional tutors are available six days a week (usually from 8:30 a.m. until 10:00 p.m.) and offer drop-in, and scheduled tutoring appointments to individuals and groups. Peer tutors offer drop-in tutoring in select academic disciplines such as mathematics, business, accounting, the sciences, and psychology. Working closely with faculty and staff, the Center's professional and peer tutors encourage students to excel at their academic goals. The primary objective of the Center is to foster student academic success while encouraging independent learning.

The Tutoring Center provides academic tutoring in such areas as writing development, time management, study techniques, test-taking strategies, and goal-setting processes, as well as select

subject area tutoring in a number of academic disciplines. At the core of our services are the following:

Writing support: We assist students in all facets of the writing process: brainstorming, critical thinking development, organization of ideas, thesis development, outline preparation, revision strategies, and editing strategies.

Critical reading skills: We model active reading strategies and teach summarizing, paraphrasing, and analytical skills.

Time management and study skills: We review course syllabi and co-curricular activities with students and help them learn to create schedules that will lead to the most effective use of their time. Additionally, we teach effective study strategies tailored to individual student needs.

English as a Second Language: We assist those students for whom English is not their primary language with reading and writing skills and facilitate small group conversation practice sessions.

Pathways: Disability Services

Telephone: 603.428.2302

Accommodations Policy

New England College has a history of success in challenging and supporting students of diverse academic backgrounds who wish to achieve their full intellectual and personal potential.

Unlike some schools designed exclusively for students with learning differences, New England College does not have a special program just for students with disabilities. We have found, however, that our support services can meet the needs of students who are good self-advocates and who do not require a formal, structured program, but who can find success when offered academic support in conjunction with small classes and personal attention by faculty and staff. Typically these students have done well in "mainstream" college preparatory programs in high school, or as graduate students were successful in completing an undergraduate degree.

New England College is committed to assuring equal access to all of its programs, services, and activities. Students needing accommodations (such as extended time on tests, permission to tape lectures, wheelchair accessibility, etc.) should set up an appointment with the Disability Services Office. To be eligible for accommodations the student will need to have current, appropriate test results that are submitted to the Disability Services Office. The testing must be administered by a licensed, qualified professional and must include a diagnosis and specific recommendations. IEPs, minutes from 504 planning meetings, or letters from school officials are not acceptable as

legal documentation; however, they can be provided along with the required testing so that the Disability Services Director can more fully understand the needs of the student. Other types of disabilities must be documented by a certified medical and/or mental health professional, and must include a current detailed diagnosis, recommendations, and reasons for specific suggested recommendations. Regardless of the learning need or disability, the Disability Services Office needs to be contacted as it handles all requests for accommodations.

It is important to remember that all requests for accommodations must come through the Disability Services Office at which time the student will participate in the Needs Assessment process. Once the student has completed the Needs Assessment form it must be given to the appropriate faculty and staff. Test documents must be received a minimum of a week before accommodations can be provided. In situations where many different parties are involved in developing accommodations, three prior weeks may be required. A month's notice is needed for housing accommodations for first time students.

Under ADA and 504 requirements the student is responsible for disclosing his/her disability to each person the student contacts for an accommodation. The College reserves the right to review documentation and determine individual accommodations and services. The College maintains the right to determine the appropriate accommodation based on the student's documentation. Accommodations are based on a review of the test results and may be different than services provided in high school, or as an undergraduate student.

Relevant information from disability documentation may be shared with College personnel at the discretion of the Disability Services Office. All questions about the College's compliance with ADA/504 should be directed to the College's Campus Compliance Officer in the Disability Services Office.

International Study

Telephone: 603.428.2358

New England College promotes international programs as an important part of its efforts to foster an awareness of world citizenship. We believe in the importance of exposure to different cultures in the personal development of our students. The College maintains cooperative relations with many study abroad program providers and foreign institutions, and provides information on a wide variety of academic opportunities abroad.

Eligibility Criteria

Students wishing to participate in study abroad opportunities must apply to the Director of Career and Life Planning in advance of the projected study abroad and meet the following criteria:

Students should have successfully completed a minimum of 30 credits in residence at New England College. Transfer credits from other colleges will not normally be applied to this credit total;

Students should have achieved sophomore status or above;

Students must have good academic and social standing, including a cumulative grade point average of no less than 2.5 in credits earned at New England College;

Any student not meeting these conditions may petition the Students Committee.

Application Deadline

The priority date for semester-long study abroad applications is the end of the second week of the preceding semester of the intended study. Deadline dates for regular applications to study abroad programs are no later than October 15 (for the Spring semester) and March 15 (for the Fall semester). The application fee for study abroad programs is set at \$250 (of which \$50 is non-refundable).

Costs for Study Abroad

Normally, New England College students enrolled in semester-long study abroad programs will continue to pay tuition, room, and board to New England College, which will in turn pay the tuition, room, and board expenses at the study abroad location. New England College students studying abroad in an approved program continue to be eligible for most of their institutional and federal financial aid. Please contact Student Financial Services for further details. Additional scholarships may be available through our study-abroad partners.

Study Abroad Opportunities

New England College sponsors study abroad programs in:

Argentina
Australia
Austria
Belize
Brazil
Canada
Chile
China
Costa Rica
Czech Republic

England
Fiji
France
Germany
Greece
India
Ireland
Italy
Japan
Jordan
Morocco
New Zealand
The Netherlands
Peru
Russia
Scotland
South Africa
South Korea
Spain
Thailand
Ukraine

English as a Second Language (ESL) Transitional Programs at New England College

English Language Programs

New England College offers a range of credit-bearing ESL courses designed to target the specific needs and abilities of the incoming English language learner. These courses focus on the range of skills necessary to succeed in an academic environment. Our coursework is supplemented by a wide range of activities designed to speed the acquisition of the academic English language tools used to succeed in the classroom.

English as a second Language course sequence at New England College is for students who meet a minimum TOFL (or equivalent) proficiency. These courses are designed to improve English communication in an academic setting across four areas: Listening, oral communication, reading comprehension and written communication. Students are placed in the appropriate course, based upon their TOFL (or equivalent) score.

The goal of NEC's ESL courses is to prepare students for academic success. All courses in NEC's ESL sequence are highly participatory. Our program is designed to immerse students in the study of academic English and our faculty are committed to student success. The College provides

tailored academic advising, support, and recourse referral for all our international students throughout their studies.

Our graduate ESL classes also provide vocabulary, reading, research, listening, and writing skills in the context of each graduate program. Students frequently take a semester of ESL before beginning their graduate courses. New England College's ESL program is committed to facilitating the successful transition to your academic program.

Our ESL classes also provide opportunities to utilize English outside of class. Campus life activities, field trips, and cultural events introduce students to their new surroundings - Henniker, New Hampshire, the Boston metropolitan area, and New England.

Admission Process

International students follow the same procedure as domestic students if they do not require English as a Second Language (native English speakers or 79-80 minimum on the TOEFL IBT). Our ESL Transitional Program accepts students with low to intermediate English proficiency, expressed by a TOEFL IBT 45 or the equivalent on comparable English proficiency tests. Students must show proof of financial support before the College issues an I-20 (Certificate of Eligibility for Non-Immigrant [F-1] Student Status). We look at each applicant on his/her own merits and evaluate all materials, including coursework, recommendations, extracurricular activities, and an essay to determine acceptance.

Academic Standards and Policies

The Bachelor's Degree

All baccalaureate candidates attending New England College are awarded, upon completion of requirements, a Bachelor of Arts or a Bachelor of Science degree.

Graduation Requirements

To graduate from New England College, a student must fulfill the following requirements:

- Completion of a minimum of 120 credits with passing grades. Some majors may require more than 120 credits (see the catalog section for your major for specific details).
- Achievement of a cumulative grade point average of at least 2.0 and a grade point average in the major (defined as all courses required for the major) of at least 2.0.

Individual disciplines may have requirements which are more stringent than the general College requirement (see the catalog section for your major for specific details).

- Successful completion of the College's Liberal Arts and Sciences Core Curriculum requirements (see the Liberal Arts and Sciences Core Curriculum section of this catalog).
- Satisfactory completion of all requirements in the major.
- Earn at least 60 credits at New England College (of which a minimum of 24 credits must be earned in the senior year), or earn 30 credits in the senior year. In addition, a minimum of 12 credits of requirements from within the major must be completed at New England College.
- By the end of their junior year, all students should file an "Intent to Graduate" form, available at the Registrar's Office.
- Fulfillment of the graduation requirements is the student's responsibility. Only the Registrar (or designee) is authorized to issue official summaries of progress. To avoid unpleasant surprises, it is imperative that students check their fulfillment of requirements with the Registrar's Office at the end of their junior year.
- A student who has earned a minimum of 108 credits by the end of the spring semester will be allowed to participate in commencement if they have a GPA, both cumulative and in the major, of 2.00 or higher and have no more than three courses left to complete.

Degrees with Latin Praise

In recognition of outstanding academic achievement, the following Latin praise is awarded at graduation. To be eligible, at least 45 New England College credits graded A, B, or C must appear on the student's academic record:

Summa Cum Laude:

Those students having a cumulative grade point average of 3.80 or higher.

Magna Cum Laude:

Those students having a cumulative grade point average between 3.65 and 3.79.

Cum Laude:

Those students having a cumulative grade point average between 3.50 and 3.64. Students with fewer than 45 New England College credits are eligible for *Cum Laude* as follows:

Credits Completed	GPA
40-45	3.6-3.74
35-39	3.75-3.89

30-34	3.9+
-------	------

Dean's List

Superior academic achievement is recognized at the end of each semester. All students completing 12 or more credits for grades (not pass/no record) are eligible. At the end of each semester, all full-time students meeting this requirement with a semester GPA of at least 3.5 will be included on the Dean's List.

Academic Standards

Grading System

Letter grades and numerical point values are assigned as listed below:

Letter Grade	Meaning	Quality Points Per Credit
A	Excellent	4.0
A-		3.7
B+		3.3
B	Good	3.0
B-		2.7
C+		2.3
C	Satisfactory	2.0
C-	Minimally	1.7
D+	passing	1.3
D		1.0
D-		0.7
F	Failure	0.0
I	Incomplete	none

P	Passing (D- or higher)	none
NR	Below passing	none
AU	Audit	none
ADW*	Administrative Withdrawal	none
ADI*	Administrative Incomplete	none
W*	Withdrawal	none
WD	Withdrew from school	none

* see following for description

ADW (Administrative Withdrawal): This grade is submitted by an instructor when a student attended the course infrequently prior to the last date to withdraw, failed to comply with the required procedure for withdrawal, and did not attend at all subsequent to the last date to withdraw. This grade is noted on permanent record, but not calculated in grade point average.

ADI (Administrative Incomplete): This grade is submitted only in extraordinary circumstances when the instructor of record did not or could not turn in grades. A grade of ADI will be converted to a letter grade by the instructor of record as soon as conditions permit. When extreme circumstances, such as the death of a faculty member, make it impossible for him or her to convert the ADI, the VPAA will make the conversion in consultation with the affected students and appropriate faculty.

W (Withdrawal): This grade is submitted when the student withdrew from class by the withdrawal deadline.

WD (Withdrew from school): This grade is submitted for all outstanding classes when a student withdraws from school.

Calculation of Grade Point Average

To compute a student's cumulative grade point average (GPA), numerical values are assigned to each letter grade as indicated above. Grades of I, P, NR, AU, ADW, ADI, W and WD are not used in grade point calculations. The sum of the grade points earned is divided by the number of GPA hours, resulting in the student's cumulative GPA.

The decision of an instructor to award a grade is presumed to be final. Grades submitted become a part of the student's permanent record. Under ordinary circumstances, no one else within the College has the right, or competence, to change an instructor's grades.

Students who believe they have been graded wrongly must immediately bring this to the attention of their instructors. Should disagreement ensue, students are best served by seeking counsel from their faculty advisors or with the Dean of Undergraduate Programs, who, if necessary, can act as intermediaries to seek resolution. As a last resort, disagreements may be appealed to the Vice President of Academic Affairs.

Pass/No Record Option

Only 16 credits under the Pass/No Record (P/NR) option may be submitted for graduation. The Pass/No Record option is not permitted in the student's major program except for internships.

During the first 20 days of the semester, the student must file with the Registrar's Office the appropriate form indicating his/her desire to be graded P/NR. Otherwise, the A-F system will be used.

No petitions will be accepted to convert from A-F to P/NR after the first 20 days of the semester. Students may, however, petition to convert from P/NR to A-F. Petitions to convert to a letter grade must be submitted to the Office of Academic Affairs.

Maintenance of Standards

Each student is expected to make satisfactory progress toward meeting degree requirements. Instructors teaching undergraduate students are asked to identify, during the fifth and eighth weeks of the semester, all who are having difficulty in their classes. This information is available to students and advisors to determine strategies for improvement.

All undergraduate students who have a cumulative GPA below 2.0 are subject to having their academic records reviewed by the Academic Standards Committee, which will determine appropriate action as indicated below. For purposes of record, students who are not under academic probation and have not been suspended or dismissed are defined as being in good academic standing.

Students who do not meet the general criteria for good standing will receive letters of warning, probation, or suspension. In viewing the records of students in academic difficulty, the Academic Standards Committee normally uses specific guidelines in decision-making. These guidelines are available from faculty advisors, the Pathways Center or the Registrar's Office.

Suspended students who wish to reenter the College must attend a hearing with the Academic Standards Committee for readmission after they have complied with the conditions of their suspension. Academic Standards Committee will determine if a student is academically eligible to return. Students must still apply and meet all requirements for readmission located in the Readmission section.

Appeals

Undergraduate students who have been placed on probation or who are suspended may appeal their status to the Academic Standards Committee. Appeals requests must be submitted to the Committee, in writing, by the deadline stated. Appeals will not normally be heard after the start of the semester.

The Committee, or its designee(s), will hear each appeal, and the student must present his or her views. The student may be accompanied, if he or she chooses, by an advocate from within the College community. The committee may confirm or change the student's academic status with such conditions as it deems appropriate. The student and parent(s), if appropriate, will be provided with written statements of the actions taken by the committee in regard to the student's appeal. Adverse decisions by the committee may be appealed, on procedural grounds only, to the Dean of Undergraduate Programs, who will review the matter and make a final determination.

Notification

Students placed on probation or who are suspended shall be notified in writing. In compliance with the Family Educational Rights and Privacy Act of 1974, parents may also be notified.

Email Policy

New England College uses NEC e-mail as a means for official communication with students. As these communications may be time sensitive, the college expects that such communications will be read in a timely fashion. The college expects that students check their NEC e-mail at least once per business day while enrolled. The college will continue to use the NEC email system as a means of official communications during the Winter and Summer breaks. Students are expected to check their NEC email accounts during these breaks at least twice during the business week. Students who have their NEC e-mail forwarded to a different email address bear the responsibility to ensure that important and time-sensitive communications are not lost.

Academic Standards for Extracurricular Activities

Academic standards for participation in extracurricular activities are determined by the individual student group or by the intercollegiate organization with which the group is affiliated.

Normal Course Load

In order to maintain full-time status, an undergraduate student must be registered for at least 12 credits per semester. The normal course load for a full-time student is 16 to 18 credits per semester. Students who enroll in more than 18 credits per semester will be charged per credit for the overload. Students who have completed at least 16 credits at NEC and have a cumulative GPA of 3.5 or higher may enroll in up to 20 credits with no overload charges.

In the graduate programs, normal course loads and credits required for full or part time status vary depending on the structure of the program.

Expected Student Academic Work per Credit

Workload expectations in this policy are an estimate of the amount of work needed for an average student to earn an average grade. Course grades are based on the quality of the work submitted, not on hours of effort. Workload expectations per credit do not vary with the method of delivery of the course or the length of the academic term. Students should plan on spending 3 hours, per credit hour, per week. Therefore, they should plan on spending approximately 12 hours per week for one 4 credit hour course.

Adding/Dropping

Undergraduate students may add or drop courses online during the first five class days of the fall or spring semester. After the first five days, students may petition to add/drop classes, with approval of the instructor and faculty advisor. Petition forms are available at Pathways and the Registrar's Office. Dropped courses are not recorded on a student's academic record. The Add/Drop period during Summer or January terms will be proportionate to the length of the term.

Withdrawing

An undergraduate student may withdraw from a course for any reason up to the tenth class day past mid-semester. Withdrawals are noted on the student's academic record with the designation of "W." Students are financially responsible for all courses with a "W" grade. Withdrawal forms are available from the Registrar's Office and Pathways and must be completed and returned to the Registrar's Office by the deadline listed above. After the last date to withdraw, students must petition to do so. Petitions are available at the Registrar's Office and Pathways, and must be approved by the students Associate Dean. If petition is not granted, and appeal can be made to the Dean of Undergraduate Programs.

Audited Courses

Students wishing to audit a course may do so by contacting the Registrar's Office. Permission of the instructor is required. The workload and attendance policy in the course is to be determined by the instructor and should reflect expectations of both the instructor and the student. No credit is granted for an audited course. A grade of "AU" will not be entered on the student's permanent record unless a student satisfactorily completes the attendance and workload requirements of the course. Full time students are not charged for an audited course. Part-time students will be charged one-half the current tuition rate for that course. All students will be charged any course-related fees. After the end of the add/drop period, a student may not convert an audited course back to the letter grading system.

Prerequisites and Repeated Courses

An instructor may waive a prerequisite if the student has demonstrable competence in areas embraced by the prerequisite.

Credit is not given a second time for a repeated course, unless the Academic Catalog and/or the official course schedule state that the course may be repeated for credit. When a course not repeatable for credit is repeated, all grades remain on the student's permanent record, but only the highest grade is used in computation of the grade point average. Students may repeat a four-credit NEC course with an equivalent three-credit course taken at another institution. Only three credits of credit would be awarded in this case. Students who need to repeat courses no longer offered due to curricular changes may take an approved substitute if available. Substitutions must be approved by the discipline in the case of a major course or the Associate Dean of Liberal Arts Education in the case of a Liberal Core Curriculum course.

Incomplete Grades

An "I" (Incomplete) is given only in exceptional circumstances beyond the student's control (e.g. illness, unexpected delay in receiving materials for which the student is not responsible, etc.). A student has 30 calendar days from the first day of the following semester to complete any grade of incomplete received in a semester. Unless the instructor notifies the Registrar's Office that another grade has been issued, grades of incomplete are automatically converted to grades of "F" or "NR."

Faculty may grant an extension to students with compelling reasons for needing more time to complete course work. An extension is also applicable to students not registered in the semester following the incomplete. Extensions will be granted only for extenuating circumstances.

When the coursework for an incomplete is submitted and the grade is changed, the new grade will be applied immediately to the student's standing with regard to academic honors, warning, probation, etc.

Exceptions to Academic Policy

Exceptions to the College's academic policies may be requested only by petition, which must be approved by the Dean of Undergraduate Programs and Services and the Registrar. This decision can be appealed to the VPAA.

Grade Reports

Student grades are available through the College's web services. Students requiring a paper grade report may request one from the Registrar's Office. A student may request a written evaluation of his/her work in any course. A student requesting a written evaluation must submit that request in writing to the Dean of Undergraduate Programs. Students are entitled to examine and make copies of any graded examinations and papers not handed back in class.

Class Attendance

Students are expected to attend and participate in all dimensions of every course. A student's grade in a course may include attendance, and these policies and grading procedures will be stated clearly in writing by the instructor in the course syllabus before the end of the add/drop period. Attendance policies may vary among instructors, and some courses may involve specified grade reductions for missed classes. It is the responsibility of each student to understand fully the attendance policies and procedures for every course in which the student is enrolled.

New England College respects student absences from classes due to religious observances. In such cases, students are expected to notify their instructors prior to the anticipated absence. Making up missed assignments is the student's responsibility.

Withdrawals and Leaves of Absence

A student who wishes to withdraw from the College during a semester must apply to the Director of Counseling or the Director of Academic Advising. If the student is less than 18 years of age, or if his/her parent(s) will be billed for his/her tuition, the College must have evidence that the parent(s) is/are aware that the student is planning to withdraw.

Students are automatically granted a leave of absence for a period of two years if they are in good academic and social standing. All other students must apply for readmission should they wish to return to the College.

The normal limitation for a leave of absence from the College is two years. Students whose absence exceeds this limitation may be required to file for formal readmission to the College, in which case they would normally reenter under the major and graduation requirements in effect at

the time of their readmission. Students who withdraw during a semester may be required to apply for readmission before returning the following semester. For further information please see the Student Handbook.

Policy on Disruptive Behavior in an Academic Setting

Disruptive Behavior in an Academic Setting

New England College is committed to establishing an educational community that is respectful of all members. This includes balancing free speech, including the expression of controversial opinions, with appropriate behaviors in all academic settings. Students and faculty share responsibility in maintaining an appropriate learning environment.

Disruptive behaviors hinder the educational process. Although these types of actions are addressed in The Compass, the New England College Student Handbook, the purpose of this policy is to clarify what constitutes disruptive behavior in an academic setting, what actions a faculty member and/or the Office of Academic Affairs may take in response to disruptive conduct, and the interim procedures that will be followed if a student needs to be removed from an academic setting pending the outcome of an investigation and student conduct process.

Classifying and Defining Disruptive Behaviors

Disruptive behaviors in an academic setting are those behaviors that a reasonable faculty member would view as interfering with normal academic functions and/or the emotional and/or physical safety of all members of the class community. For the purposes of this document, disruptive behavior is divided into three categories based on the degree to which conduct includes aggression or harassment.

Category One: A category one disruption is behavior that is disruptive, but which has no element of aggression or harassment, i.e., no one feels threatened, endangered or at-risk. Such situations might include but are not limited to:

A student is sleeping during class.

A student talks incessantly during class.

A student uses a cell phone during class.

Category Two: A category two disruption is behavior that has some element of aggression or harassment without an immediate risk. Such situations might include but are not limited to:

A student swears loudly and repeatedly upon getting a grade.

A student makes disparaging comments about other students.

A student tears his paper up in class upon receiving it.

A student appears to be under the influence of drugs or alcohol.

Category Three: A category three disruption is behavior that has clear and immediate potential for risk or harassment. Such situations might include but are not limited to:

A student threatens a faculty member, staff member, or student.

A student says he/she has a gun and knows how to use it.

A student mentions contemplating suicide.

Policy

Students are expected to adhere to the standards described in the Academic Catalog and The Compass; specifically, students are to refrain from disrupting classes and other academic settings.

Category One Offenses

A faculty member should tell students who are disruptive to stop the disruptive behavior and to warn the student that such disruptive behavior, if continued or repeated, may result in academic or disciplinary action.

A faculty member is authorized to ask a student to leave the classroom or other academic setting if the faculty member deems such action necessary. If the faculty member takes such actions, he/she shall notify the Office of Academic Affairs within 24 hours. The Office of Academic Affairs will share this information with the Student Development Office. If, upon consultation with the Student Development Office, it is determined that the student presents a risk, the Office of Academic Affairs will request that the faculty member complete a *Disruptive Behavior in an Academic Setting Report*. This report documents the events that occurred in this incident.

Category Two Offenses

A faculty member is authorized to ask a student to leave the classroom or other academic setting if the faculty member deems such action necessary. The faculty member must report such instances to the Office of Academic Affairs within 24 hours. Working collaboratively with the faculty member and the Student Development Office, the Office of Academic Affairs will take appropriate action that may include initiating interim removal and/or initiating an investigation and student conduct proceeding.

Category Three Offense

A faculty member is required to report all Category Three offenses to Campus Safety. This report will result in an immediate interim removal of the student from the academic setting, pending the outcome of the investigation and student conduct proceeding. The faculty member will notify the Office of Academic Affairs about the incident as soon as possible. The faculty

member must complete a *Disruptive Behavior in an Academic Setting Report* within 24 hours of the incident.

Interim Removal from an Academic Setting

The Office of Academic Affairs, in consultation with the faculty and the Student Development Office, may enact interim removal pending resolution of the matter by sending the student a written notice informing the student of the interim conditions and advising the student of the pending investigation and judicial process.

The Office of Academic Affairs will work with the student to try to establish an interim means to allow the student to continue to make satisfactory academic progress. This may include reassigning the student to a different class section or a different academic advisor. While it is the intention of the College to assist a student in making satisfactory academic progress, the College will not compromise the safety of faculty, staff, or students in order to do so.

Any incident that results in interim removal will be referred directly to the Student Development Office within 24 hours.

Student Conduct Proceedings

Generally, a student will not be permanently removed from an academic setting without a formal student conduct proceeding. A student who is removed from an academic setting on an interim basis has the following rights:

- The Student Development Office will conduct a Student Conduct Hearing pursuant to an investigation and judicial processes as defined in the New England College Compass.
- The student can request an expedited review of the incident. If such a request is made, the Student Development Office shall review the incident through a Student Conduct Hearing within three business days of the date that the student requests such review.

In addition to the sanctions that are possible through a Student Conduct Hearing, the following possible sanctions are available to the instructor and the Office of Academic Affairs.

Authority of Instructor:

- Warning
- One-time removal from a class session or an academic setting
- Academic sanctions if course participation and/or attendance are a component of the final grade and are indicated in the syllabus

Authority of the Office of Academic Affairs:

- Interim exclusion from the instructor's academic area, pending the outcome of a judicial procedure
- Interim reassignment to a different class section or alternative means by which to make satisfactory academic progress
- Interim reassignment to a new academic advisor

Appeals

There is no appeal of a faculty member's one-time decision to remove a student from a class, and there is no appeal of an interim decision to remove a student from an academic setting pending the outcome of the judicial procedures. To accelerate this process, the student must request an expedited judicial review.

Appeals for the outcome of the judicial proceedings will follow the appeals process described in The Compass.

Students with Disabilities

All students, with or without disabilities, are expected to adhere to the same reasonable behavior standards in academic settings. Faculty are not required to make accommodations or to ignore inappropriate behavior by a student who has a disability unless the faculty member has received some written notification from the Office of Disability Services that provides for a reasonable accommodation.

Students' Rights to Privacy

All information and discussion regarding the disruptive student shall be handled in a confidential manner. The privacy of the student's educational records, including misconduct cases, is protected under the Family Educational Rights and Privacy Act of 1974 (FERPA).

Disruptive Behavior in an Academic Setting Report Form

The *Disruptive Behavior in an Academic Setting Report* form should include the following information:

- *Date of incident*
- *Student's name*
- *Instructor's name*
- *Instructor's phone number*
- *Instructor's email*
- *Title of course, course number and section*

- *Detailed summary of incident including a description of the disruptive behavior*
- *Names of witness and identification of witness status (student, faculty, staff, etc.)*
- *Action, if any, taken by the instructor (e.g. student warned, asked to leave class, campus security contacted, etc.)*
- *Recommendations for a course of action and reason for this: what do you want to have as a potential outcome?*
- *Instructor's signature*

Academic Integrity Policy

Academic Honor Principle

We as a community at New England College embrace an academic honor principle. It consists of honesty, trust, and integrity. Honesty is being true to oneself and others, engendering a culture of trust. Trust builds mutual respect, fostering a disposition of responsibility and civility. Integrity denotes inner strength of character: doing what is right and avoiding what is wrong. As members of the NEC community, we accept these values as fundamental guides to our actions, decisions, and behavior.

Academic Dishonesty

Academic dishonesty includes, but is not limited to, the following infractions:

Plagiarism

Misrepresentation

Facilitation of Academic Dishonesty

Cheating

Two Levels of Academic Dishonesty

Because academic dishonesty violates academic integrity, it cannot be condoned at NEC. Nevertheless, because there are various degrees of academic dishonesty, some more serious than others, NEC classifies offenses into two levels: minor violations and major violations. In accordance with academic freedom, NEC entrusts all decisions regarding cases of academic dishonesty (i.e., whether they be minor or major) to the discretion of each instructor, accepting as a premise that instructors honor intellectual property rights and wish to promote academic integrity in their students.

Minor: a minor violation is any case of academic dishonesty that an instructor deems of such a nature that it does not compromise academic integrity or reflect a flagrant breach of NEC's Academic Honor Principle (see above). It typically involves cases of accidental omissions or unintended oversights.

Major: a major violation is any case of academic dishonesty that an instructor deems serious enough to warrant reporting. A major violation compromises academic integrity and constitutes a flagrant breach of NEC's Academic Honor Principle (see above). It typically involves cases in which a student deliberately commits an act of academic dishonesty.

Procedures for Minor and Major Cases of Academic Dishonesty

As indicated above, instructors use their discretion in determining whether instances of academic dishonesty are minor or major.

Minor

In the case of a minor offense, the instructor should meet with the offending student to notify him or her of the charge and explain the meaning and importance of academic honesty. In addition, the instructor, in consultation with the offending student, decides any associated penalty: e.g., should the work be redone, should it receive a grade deduction, should it receive a failing mark? If the case is indeed minor, it is understood to have been an accident, a mistake, or an oversight. Hence, the purpose of meeting with the student is to educate so that he or she will know how to avoid similar acts of academic dishonesty in the future. An initial case of a minor offense in a course is not reported to the Registrar.

Major

In the case of a major offense, the instructor collects relevant evidence, meets with the offending student to notify him or her of the charge, explains the seriousness of the charge (including the penalties associated with violations: see below), and submits a report of academic dishonesty to the Registrar. In the meantime, the instructor decides how the offense will affect the offending student's grade in the course.

Sanctions for Major Cases of Academic Dishonesty

All major infractions of academic dishonesty will result in the student's name being reported to the Registrar, who enters that student's name in a log for future reference. The information is confidential, to be kept among those parties immediately concerned: the instructor of the course, the student, the Registrar who enters the name, and any others directly involved, such as the Associate Dean of the Division, the student's advisor, the Academic Standards Committee, and the Academic Integrity Board.

First Reported Case: In response to an initial case of academic dishonesty, a student must successfully complete and pass (all questions answered correctly) an assigned plagiarism tutorial/test on academic integrity via Blackboard, or else the student will be put on academic

suspension. The student will have three weeks upon being enrolled in the Bb course (the plagiarism tutorial/test itself) to pass the tutorial/test. The test may be taken as many times as necessary within those three weeks for the student to pass it. Failure to pass it will result in academic suspension.

Second Reported Case: In response to a second case of academic dishonesty, a student must attend a hearing with the Academic Integrity Board. Penalties for a second case of academic dishonesty may include suspension. Suspension can be appealed according to the policies described below. Readmission to NEC after suspension due to cases of academic dishonesty will be determined by the Academic Standards Committee.

Third Reported Case: In response to a third case of academic dishonesty, a student must attend a hearing with the Academic Integrity Board. Penalties for a third case of academic dishonesty may include permanent expulsion from NEC. Expulsion may be appealed according to the policies described below. Readmission to NEC after expulsion is not allowed.

Academic Integrity Board and Hearings

The Academic Integrity Board consists of at least two members of the Academic Standards Committee and a staff member. Hearings will include the Academic Integrity Board and the student. The student may also invite a witness or advocate from within the college community. When appropriate, hearings may also include relevant instructor(s), witness(es), or advocate(s) from within the college community that the instructor(s) invites.

Appeals Procedures

A student may appeal to the Academic Integrity Board an instructor's accusation of academic dishonesty or the instructor's decision to fail, for example, an offending student for an assignment or the course. Within ten class days of receiving notice of the disputed accusation or decision, the student must submit a written request for a hearing to the Academic Integrity Board. The request will contain a statement of the basis for appeal, as well as any supporting evidence. The instructor will receive a copy of the student's appeal. After the hearing and within ten class days, the Academic Integrity Board will inform the student and the instructor of its decision. If the decision of the Academic Integrity Board reverses an accusation of academic dishonesty, all records pertaining to the case will be destroyed.

A student may appeal the decision of the Academic Integrity Board. The appeal must be submitted in writing within ten days of the decision and can rest on procedural grounds only. It is to be given to the Vice President of Academic Affairs, whose decision is final.

A student may also appeal a decision by the Academic Integrity Board regarding penalties associated with a second or third case of academic dishonesty (e.g., suspension or expulsion).

Such appeals must be submitted in writing within ten days of the decision, on procedural grounds only, to the Vice President of Academic Affairs whose decision is final.

Transfer Credit

New England College will grant credit for course work taken at other regionally accredited colleges in accordance with the recommendations of the "Transfer Credit Practices of Selected Educational Institutions" published by the American Association of Collegiate Registrars and Admissions Officers.

New England College recognizes that this activity must be governed by regulations that are clear, consistent, and equitable.

The Registrar has the sole authority to grant transfer credit. The transfer credit evaluator, acting on behalf of the Registrar, evaluates all requests for advanced standing and will notify transfer students in writing of credit granted. The evaluator works closely with Associate Deans and other faculty to ensure that all credit granted is based on the most current academic information.

Transfer Policies

1. Transfer credit will be normally awarded only for course work completed at regionally accredited institutions of higher education or the equivalent in other countries.
2. New England College awards credit only; grades and other academic honors from other institutions are not recorded on a student's academic record, with the exception of courses taken through New Hampshire University and University Council (NHCUC) schools after a student has matriculated at New England College.
3. The evaluator reviews each course on an individual basis by comparing catalog course descriptions and reviewing any other appropriate documents. A course equivalent will be assigned to each course granted transfer credit, and the evaluator will indicate if that credit will apply to general education requirements. If the student has indicated a major, the evaluator will indicate if that credit will apply to degree requirements. Transfer credits are awarded on a credit-by-credit basis only. A three credit course taken at another institution will satisfy a four credit requirement at NEC, but only three credits of transfer will be granted for that course. Students transferring from institutions on the quarter-hour system will be granted 0.67 semester hours per quarter hour. Not all credits granted will necessarily be applicable to degree requirements. If previous course work is deemed to have no applicability to a degree program, or if no comparable course at New England College can be identified, and yet the course work is deemed comparable to college-level work, then unassigned elective credit may be granted.

4. Entering transfer students will be granted class standing according to the following table:

<u>Credits Granted</u>	<u>Class Standing</u>
0-29	First-year student
30-59	Sophomore
60-89	Junior
90+	Senior

Transfer credit of any type granted by other institutions must be reevaluated by New England College prior to granting New England College credit. Students must have an official transcript sent to New England College from each school attended.

5. Only those courses in which a student has received a grade of C- or better will be considered for transfer credit, except as stated below:
- Any student possessing an Associate of Arts degree from a regionally accredited institution may be granted junior standing (60 credits), provided that the student has earned at least 60 credits at the previous institution. When junior standing is granted, all passing course work will be granted credit, regardless of grade, with the exception that no more than 16 credits of D grades will be accepted. Please note that some majors may have restrictions on the number of D grades within the major. Transfer students with Associate of Arts degrees should understand that some College programs may require more than two years to complete.
 - If a D grade is received in the first course of a two-course series (such as Accounting I and II) and a C- or better grade is received in the second course, credit will be granted for both courses, subject to the 16-credit limit noted above.
6. Evaluation for transfer credit will be made at the time of a student's admission to New England College. Students who have attended other institutions of higher education must include official transcripts from all previous institutions in their application, regardless of whether or not they wish to be granted credit for that work. Course work in progress at the time of application will be evaluated on a tentative basis and credit awarded pending receipt of an official transcript.
7. Courses taken at other institutions after a student is enrolled at New England College must be approved in advance through the Registrar's Office.
8. There is no limit to the number of transfer credits that can be granted; however, a student must earn at least 60 credits at New England College (of which a minimum of 24 must be earned in the senior year), or 30 credits must be earned in the senior year. In addition, a

minimum of 12 credits of requirements from within the major must be completed at New England College.

9. Students who repeat courses at New England College for which they have already received transfer credit will lose that transfer credit.
10. General Education courses are not required to be equivalent to New England College courses but must satisfy the same guidelines and principles as New England College Liberal Core Curriculum courses.
11. Students transferring from institutions where course work is graded by non-traditional mechanisms will be asked to request that the institution provide letter equivalents or written evaluations from individual instructors.
12. Credit will be granted for each score equal to or higher than those recommended by the American Council on Education (ACE) on the College Level Examination Program (CLEP). Placement and course equivalencies are determined by the appropriate discipline.
13. College Entrance Examination Board advanced placement tests with scores of 3, 4, or 5 will be granted up to eight credits, depending on the exam and the score. Placement and course equivalencies are determined by the appropriate discipline.
14. No credit will be granted for the following:
 - social activities;
 - pre-collegiate or remedial courses;
 - correspondence courses, unless recognized and offered by the U.S. Armed Forces Institute;
 - continuing education units.
15. International Equivalency Policies:
 - British General Certificate of Education (G.C.E.) "A" level laboratory science courses be granted ten credits for a grade of A, B or C and seven credits for a grade of D or E.
 - Other G.C.E. "A" level courses will be granted nine credits for a grade of A, B or C and six credits for a grade of D or E.
 - Students holding a French Baccalaureate II will be granted 30 credits and sophomore standing.
 - Students completing a 13th year at a Canadian secondary school will be granted appropriate credit using AACRAO or British Council standards.
 - International Baccalaureate will be granted up to 30 credits by individual subjects.
 - Work comparable to British "A" level work will be granted credit accordingly.

Credit by Proficiency Examination

College-Level Exam Program (CLEP): New England College awards credits for each score greater than or equal to the American Council on Education minimum recommendation.

Internships

The College recognizes the importance of integrating academics with learning experiences outside of the classroom. Internships can provide exposure to a career field, increase self-confidence, help in the attainment of practical skills and provide contacts and references that will be helpful in gaining employment after graduation.

Internship sites can be arranged through a faculty member or the Office of Career and Life Planning. The Office of Career and Life Planning maintains up-to-date listings of internship sites and will work with students and faculty to find an appropriate site. Through a careful contracting and evaluation process, the College encourages reflection on career goals and their successful integration into the student's education as part of the internship process.

Internships require careful planning. A faculty member can develop and maintain contact with an organization and refer students for internships, or a student can locate a site through networking, research and/or direct application, with the support of the Office of Career and Life Planning or New England College faculty.

Students may elect internships within their major or minor disciplines. Specific guidelines may be established by individual disciplines, but all internships are governed by the following regulations:

- Internships are available to students who exhibit emotional maturity and a strong sense of responsibility, who have earned a minimum of 30 credits at New England College, and are in good academic standing (meeting both College-wide standards and those specific to the major);
- Internships may take place only at sites approved by the discipline;
- Internships require a full-time ranked faculty sponsor in the discipline for which credits for the internship will be awarded. A faculty member approved by the department involved and the head of its collegium/division may also serve as an internship sponsor;
- Students are required to submit to the faculty sponsor and on-site supervisor a brief resume prior to the beginning of the semester in which the internship is being conducted;
- Internships are conducted according to a contract jointly developed by the student, faculty sponsor, and internship site supervisor. Completed internship contracts must be submitted to the appropriate Division Associate Dean prior to the beginning of the internship;
- Internships may be awarded from 1 to 16 credits. The number of credits awarded for an individual internship is determined by the discipline and dependent on the complexity of the internship experience, the amount of conventional academic work assigned, and the amount of time spent on-site by the student intern;

- No more than 16 internship credits may be applied towards the total credits required for graduation. Some disciplines allow fewer than 16 credits to be applied to major requirements;
- Tuition for internships is the same as for other College courses and is subject to the same charges for overloads (*19 or more credits*).

Directed Study

A directed study is an academic tutorial course that allows a student to do an in-depth study with an instructor in an area of mutual interest. Meetings with the instructor will occur on a weekly basis.

The Following Guidelines Apply to Directed Study Courses:

- Directed Study courses normally do not duplicate courses offered during a semester;
- Directed Study courses may not be for more than four credits;
- Students may use no more than 12 credits of Directed or Independent Study courses toward meeting graduation requirements. A combination of no more than 28 credits for Directed Study, Independent Study, and Internships can be applied toward meeting graduation requirements.
- Students Registering for a Directed Study Must:
 - have at least sophomore standing (*30 credits or more*);
 - have a cumulative GPA of at least 2.5;
 - have no record of having been reported for cheating or plagiarism;
 - have a faculty sponsor for the Directed Study;
 - have completed the Directed Study Contract Form, and have obtained all the necessary signatures;
 - have submitted the completed forms to the appropriate Associate Dean prior to the start of the Directed Study.

Independent Study

An Independent Study is an academic course that allows a student to do in-depth study in an area of interest. Students will work primarily on their own, with minimal support and guidance from the faculty sponsor.

The Following Guidelines Apply to Independent Study Courses:

- Independent Study courses normally do not duplicate courses offered on a semester or yearly basis;
- Independent Study courses may not be for more than four credits;

- Students may use no more than 12 credits of Directed or Independent Study courses toward meeting graduation requirements. A combination of no more than 28 credits for Directed Study, Independent Study and Internships can be applied toward meeting graduation requirements.
- Students Registering for an Independent Study Must:
 - have at least junior standing (*60 credits or more*);
 - have a cumulative G.P.A. of at least 3.0 in the major;
 - have no record of having been reported for cheating or plagiarism;
 - have a faculty sponsor for the Independent Study;
 - have completed the Independent Study Contract Form, and have obtained all the necessary signatures;
 - have submitted the completed forms to the appropriate Associate Dean prior to the start of the Independent Study.

Academic Divisions

New England College offers a robust program of undergraduate, graduate and online continuing education studies. Faculty work together closely to promote the integration of coursework and to build foundations for continued study and professional success. All disciplines and programs of New England College prepare undergraduate students for graduate study or for immediate entry into professional or pre-professional positions and prepare graduate students for professions or advancement within professions. New England College's departments, majors, minors, and other academic programs are housed in the following divisions: Arts and Humanities, Education, Management, and Natural and Social Services.

Management Division

The programs in the Division of Management provide opportunities to develop ethical and responsible citizens who appreciate the economic and political landscape of a changing global environment. The curriculum brings several traditional fields of study, including business, economics, and public relations, together in new and exciting ways to help students prepare for further studies or careers in business, communication, government, and not-for-profit organizations. Whether graduates find their niche in starting a business or working in an established community or corporate setting, they will have developed the critical thinking and analytical skills necessary for managing resources, information, and ideas.

Undergraduate

- Accounting

- Business Administration
- Sports and Recreation Management
- Computer Information Systems
- Associate Degree in Business Administration

Graduate

- MBA
- MS in Management
- MS in Accounting
- MS in Computer Information Systems
- MS in Engineering Project Management

Continuing Education

- Business (Associate and Bachelor)
- Healthcare Administration
- Associate and Bachelor in Liberal Arts (shared with other Divisions)

Education Division

The mission of the Education Division is:

- To enable students to understand the forces that shape individual and societal dynamics;
- To empower students to be lifelong learners and agents of change;
- To promote a concern in students for enhancing the quality of individual lives;
- To provide a supportive context in which students are encouraged to develop their own ethical world views;
- To develop students' critical thinking skills;
- To foster creativity and qualities of effective leadership;
- To foster sensitivity to and the appreciation of cultural, ethnic, gender, and generational differences;
- To prepare students for graduate study or immediate entry into professional or pre-professional careers.

Each discipline merges practical skills with theoretical concepts and incorporates "real world" experiences into classroom discussion. Concern for ethical issues in research and practices forms the cornerstone of our philosophy of education.

Undergraduate

- Educational Communities

- Elementary Education K-8 (certification)
- Kinesiology
- Outdoor Leadership
- Physical Education K-12 (certification)
- Secondary Education (English, Social Studies, or Life Science) (certification)
- Special Education K-12 (certification)
- Theatre Education K-12 (certification)

Graduate

- MED
- CAGS
- EdD
- Superintendent Certification
- Principal Certification
- Teacher Conversion
 - Elementary Education K-8 (certification)
 - Physical Education K-12 (certification)
 - Secondary Education (English, Social Studies, or Life Science) (certification)
 - Special Education K-12 (certification)
 - Theatre Education K- 12 (certification)

Continuing Education

- Associate and Bachelor in Liberal Arts (shared with other Divisions)

Arts & Humanities Division

The mission of the Arts & Humanities Division is to promote the understanding of what it is to be human and explore the ways humans interact with each other and the environment. To those ends we seek to develop in our students.

- Critical and creative thought, communication skills, imaginative and curiosity;
- Ethical and humane values that reflect respect for all the members of our species and the cultural diversity of the world in which we live;
- An understanding of the rule of law, morality and ethics and how they inform a commitment to social justice;
- An appreciation for beauty and elegance in the creative and performing arts, and the search for meaning and truth;

- Knowledge of the variety of human cultures, the civic and natural environments in which we engage one another and the memory of the cumulative thoughts and acts of all humankind.

Undergraduate

- Art
- Communications Studies
- Creative Writing
- Criminal Justice
- History
- Integrated Studies (in Philosophy&Literature)
- Modern Languages/ESL
- Music
- Political Science
- Theatre
- Women's Studies (minor)
- Associate Degree in Humanities

Graduate

- MA in American Studies
- MA in International Relations
- MA in Professional Writing
- MA in Public Policy
- MFA in Creative Writing

Continuing Education

Associate and Bachelor degrees in:

- Communication Studies
- Criminal Justice
- Humanities
- Liberal Arts (shared with other Divisions)

Natural & Social Sciences Division

The Natural & Social Sciences are powerful intellectual disciplines for understanding the universe. As such, they are firmly embedded in the liberal arts and sciences traditions. Our goals are to enable students to develop:

Critical and quantitative thinking to accumulate and analyze reliable knowledge and to make rational and logical decisions based on that knowledge;

Abilities to see scientific methods as universal problem-solving techniques, and to integrate these techniques into other disciplines and everyday life.

The majors emphasize both theoretical and applied approaches:

- Biology focuses primarily on theoretical aspects of organisms and their environment within the framework of evolution;
- Environmental Science applies this information to the "real world," the world of human and practical affairs;
- Psychology focuses on human development and interactions with the intent of using this knowledge to better one's community and the world;
- Health Science provides critical background in the natural sciences and facilitates the application to many health care careers.

Undergraduate

- Biology
- Environmental Science
- Environmental Studies & Sustainability
- Health Science (with various pre-professional tracts)
- Psychology (General and Human Services concentrations)
- Sociology Minor
- Associate Degrees: Natural Science and Mathematics; Social Science (includes courses from other Divisions)

Graduate

- MS in Human Services
- MS in Mental Health Counseling

Continuing Education

- Psychology

Associate and Bachelor in Liberal Arts (shared with other Divisions)

School of Graduate and Professional Studies

The purpose of New England College Graduate and Professional Studies is to remove obstacles to educational advancement and open new pathways leading to professional development and

personal enrichment. Coursework integrates the conceptual knowledge necessary for understanding complex organizational systems navigating dynamic professional environments with projects applied to contemporary workplaces. Graduate programs are offered on the Henniker campus, online, and on location throughout New England.

Graduate and Professional Studies Programs offer the following degrees: Master of Arts in Professional Writing, Master of Arts in Public Policy, Master of Business Administration, Master of Education, Master of Fine Arts in Creative Writing (Poetry and Fiction), Master of Science in Accounting, Master of Science in Higher Education Administration, Master of Science in Management, Master of Science in Mental Health Counseling, Master of Science in Human Services, Doctor of Education (Ed.D.), and continuing education Bachelor of Science programs in Business, Criminal Justice, Health Care Administration, Liberal Studies, and Psychology. For more information on these programs and specific offerings please see that section of the catalog.

Graduation Requirements

To graduate from New England College, a student must fulfill the following requirements:

- Completion of a minimum of 120 credits with passing grades. Some majors may require more than 120 credits (see the catalog section for your major for specific details).
- Achievement of a cumulative grade point average of at least 2.0 and a grade point average in the major (defined as all courses required for the major) of at least 2.0. Individual disciplines may have requirements which are more stringent than the general College requirement (see the catalog section for your major for specific details).
- Successful completion of the College's Liberal Arts and Sciences Core Curriculum requirements (see the Liberal Arts and Sciences Core Curriculum section of this catalog).
- Satisfactory completion of all requirements in the major.
- Earn at least 60 credits at New England College (of which a minimum of 24 credits must be earned in the senior year), or earn 30 credits in the senior year. In addition, a minimum of 12 credits of requirements from within the major must be completed at New England College.
- By the end of their junior year, all students should file an "Intent to Graduate" form, available at the Registrar's Office.
- Fulfillment of the graduation requirements is the student's responsibility. Only the Registrar (or designee) is authorized to issue official summaries of progress. To avoid unpleasant surprises, it is imperative that students check their fulfillment of requirements with the registrar's office at the end of their junior year.
- Students who has earned a minimum of 108 credits by the end of the spring semester will be allowed to participate in commencement if they have a GPA, both cumulative and in the major, of 2.00 or higher and have no more than three courses left to complete.

New England College First Year Program

The First-Year Program provides students with an opportunity to better understand themselves as learners and to explore strategies to maximize their academic success at the college level.

Through participation in a variety of courses (typical first semester courses include Bridges to Learning, Composition, an LAS I course, and a course in their major/area of interest) and with the support of their advisor, students build on their academic strengths, engage in the NEC Community, and develop positive connections with their peers, Peer Leaders, faculty, and staff.

Most students take the following courses during their first semester:

- LAS 1000
- LAS 1110 or LAS 1120
- WR 1010
- At Least One Course in a Major

The Liberal Arts and Sciences Core Curriculum

Education for the Common Good

The New England College General Education Program reflects the values and commitments of a liberal arts education as reflected in a humanizing curriculum that supports engaged and responsible learning and teaching.

By placing the Common Good at the center of our Liberal Arts and Sciences (LAS) Core Curriculum, New England College recognizes the importance of understanding and strengthening the interdependencies that form the basis of community and promote life, and human flourishing. As the nucleus of our general education program, the LAS Core Curriculum provides a course of study that demonstrates how each of the disciplines of knowledge contributes to this understanding. Through the application of ideas to real world challenges, LAS seminars encourage responsible, ethical action in service to preserving and maintaining our natural and civic environments as the foundations of our collective well-being.

Learning Outcomes

Upon completing the Liberal Arts & Sciences Core Curriculum students will be able to:

- Describe the interdependence between human culture and the natural world;
- Explain how concepts of sustainability are connected to issues of social justice, the environment, and the economy;

- Explain the relationship between freedom of inquiry in the pursuit of knowledge and democratic/free societies;
- Discuss the inter-relationships among the disciplines;
- Apply critical and creative thinking, quantitative reasoning, and information literacy skills in the pursuit of knowledge;
- Apply course content (theory) to the world beyond the classroom (practice);
- Articulate an understanding of the ethical dimensions of knowledge and action.

Administration, Faculty and Staff

New England College Board of Trustees

James Murtha, PhD
Chair, Board of Trustees
Chairman and CEO, Maguire Associates, Inc.
New York

Lex Scourby '75, MBA
Chair-Elect, Board of Trustees
Consultant, Chicken of the Sea Frozen Foods
New Hampshire

Stephen A. Geremia '85
Co-Vice Chair, Board of Trustees

Undergraduate Programs

Residential Undergraduate

Accounting

The Accounting faculty believes that competence in accounting is fundamental to good management. Recent events serve to reinforce this belief. This challenging major includes hands-on work experience in an accounting internship and prepares the student for a variety of careers in accounting. For those interested in "sitting" for the CPA exam, the College offers a one-year graduate master's program.

One of the hallmarks of New England College is the close working relationship between our faculty and our students. The Accounting faculty is highly motivated to help each student realize his or her full potential for success in the program.

Learning Outcomes

Students completing the Accounting program should be able to:

- Prepare and evaluate financial statements.
- Understand the role of the accountant in the organization and in society.
- Understand the impact of taxes on decision making and the statements.
- Understand the importance of costing processes in an organization.
- Understand and subscribe to the ethical code of conduct required by the accounting profession.
- Understand and implement internal control mechanisms within an organization.
- Remain accountable to the stakeholders of the organization for the accurate and fair presentation of the financial statements.
- Be prepared to take the certification exams in accounting (CPA, CMA, CFP, CIA).
- Use the experiential learning activities they had on campus with things like Quickbooks, H&R Block tax software, etc. to enhance their capabilities in their future job experiences.
- Understand the pronouncements as promulgated by the FASB, SEC, AICPA, etc. in facilitating corporate governance.

Experiential Learning Component:

The Business Department has felt strongly that an important component of the Accounting major would be a required internship. While we are not as concerned with the level of off-campus activity, it was decided that as long as the student gets one course credit (45 hours of work) for the internship, this would suffice.

Students have a wide variety of exciting opportunities for internship: one of our students worked on Wall Street for a major stockbrokerage firm; another student worked in a cost accounting capacity for a local hospital; another student worked for a nonprofit organization in Hillsboro that caters to individuals with autism in a capacity to use the accounting software, Quickbooks, to update their books of record.

Major

Accounting, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Accounting Core Courses

AC 2210 (BU 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the financial Accounting Standards Board, its predecessors, and the Security and Exchange Commission. (4 Credits)

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to

acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. (4 Credits)

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 2210/BU 2210. (4 Credits)*

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 3210 or permission of the instructor. (4 Credits)*

AC 3230 - Cost Accounting

A study of the concepts, procedures and tools associated with reporting financial data on performance to an organization's decision-makers. Emphasis is on the tools associated with planning, directing, and controlling an organization's activities, all with the goal of performance improvement. Topics include activity based costing, earned value management, and budgeting activities.

Prerequisites: AC 2220/BU 2220. Offered every other year. (4 Credits)

AC 3290 - Federal Taxation

A study of the composition of the federal tax law as applied to individuals. Topics include filing statuses, exemptions, basis calculations, capital gains and losses, sale of residences. An important component of the course will be the strategies the taxpayer can legally use to evade or postpone the payment of taxes. An introduction to the tax effects of organizing as a proprietorship, partnership, or corporation will be presented. *Prerequisite: AC 2210/BU 2210 or permission of the instructor. Offered every other year. (4 Credits)*

AC 4910 - Internship in Accounting

Qualified students apply knowledge and theories gained in class to real accounting situations. Students may work with cooperating employers on either a full- or part-time basis to achieve predefined objectives that have been developed and accepted by the student, the employer, and a faculty supervisor. The student's internship is developed under the guidance of an accounting faculty member. *Contract required. Variable credit (1-16)*

AC 5640 - Auditing & Assurance

This course introduces the student to the audit process, with emphasis on the perspective of management in a CPA firm, but with consideration to internal processes. Topics include implementing control procedures and assessments using both the compliance and management methods. Audit planning, staffing and training are considered. Special topics include enterprise risk management and auditing non-profit and public organizations.

Prerequisites: AC 3210, AC 3220. Offered every other year. (4 Credits)

Electives

Take one course from the following list:

AC 5620 - Government and Non-Profit Reporting

This course covers the environment of government/non-profit accounting and financial analysis,

budgeting control, revenues and expenditures, accounting for capital projects, related account groups, and endowment management to include investments, accounting for business type and trustee activities, issues of reporting, disclosure, and non-profit organizations. *Prerequisites:* AC 3220. *Offered on a rotating basis. (4 Credits)*

AC 5630 - International Accounting

Under the current business environment all businesses, directly or indirectly, compete in the global marketplace. Understanding and awareness of international issues in accounting, therefore, is critical to the education of a well-rounded, competent business student. The International Accounting course provides an overview of and a platform for understanding and discussion of comparative accounting, theoretical as well as practical challenges posed by the global environment. Throughout the course, accounting issues unique to international business activities, are introduced and examined. The topics encompass presentation and probe of issues faced by contemporary global entities in the areas of auditing, Standards, external financial reporting, accounting systems, foreign currency transactions and translations, performance valuation, changes in price levels, controls, taxes and transfer pricing, as well as ethical, social, legal, and cultural considerations. *Prerequisites:* AC 3210. *Offered on a rotating basis. (4 Credits)*

AC 5730 - Accounting for Mergers and Acquisitions

This course focuses attention on all key stages of the M&A lifecycle including conception, planning, the first 100 days post-merger/acquisition, due diligence of intellectual property, and ongoing evaluation and improvement.. *Prerequisites:* AC 3220. *Offered on a rotating basis. (4 Credits)*

Related Courses Required for the Major

(4 courses, 16 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth.

Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. *(4 Credits)*

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT*

1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)

BU 3920 - Business Law

An introduction to the nature of law and the judicial system as it affects business. Torts, contracts, proprietorships, agencies, partnerships, and corporations will be considered. (4 Credits)

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status (4 Credits)

Strongly Recommended Course

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites:* BU 2110, BU 2210 (4 Credits)

Other Programs

Accounting Program Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

AC 2210 (BU 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the financial Accounting Standards Board, its predecessors, and the Security and Exchange Commission. (4 Credits)

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (2 Credits)

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be

human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

AC 2220 (BU 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and

religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Elective or Quantitative Literacy Requirement
- Elective

Second Year

Fall

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 2210/BU 2210. (4 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn

manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Spring

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites: AC 3210 or permission of the instructor. (4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

- Elective *or*

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

Third Year

Fall

AC 3230 - Cost Accounting

A study of the concepts, procedures and tools associated with reporting financial data on performance to an organization's decision-makers. Emphasis is on the tools associated with planning, directing, and controlling an organization's activities, all with the goal of performance improvement. Topics include activity based costing, earned value management, and budgeting activities.

Prerequisites: AC 2220/BU 2220. Offered every other year. (4 Credits)

- LAS 2130 (LAS 5)
- Elective *or*

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites: BU 2110, BU 2210 (4 Credits)*

- Elective

Spring

AC 3290 - Federal Taxation

A study of the composition of the federal tax law as applied to individuals. Topics include filing statuses, exemptions, basis calculations, capital gains and losses, sale of residences. An important component of the course will be the strategies the taxpayer can legally use to evade or postpone the payment of taxes. An introduction to the tax effects of organizing as a proprietorship, partnership, or corporation will be presented. *Prerequisite: AC 2210/BU 2210 or permission of the instructor. Offered every other year. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

- AC Elective

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status *(4 Credits)*

BU 3920 - Business Law

An introduction to the nature of law and the judicial system as it affects business. Torts, contracts, proprietorships, agencies, partnerships, and corporations will be considered. *(4 Credits)*

Art: Fine Arts Concentration and Media Arts Concentration

Program Description:

The art program provides majors with the opportunity to acquire a thorough knowledge and practice of the basic means of visual expression and a broad exposure to the history of art. Those who major in art acquire foundation preparation for professional or graduate study or for careers in teaching, museum work, and studio and commercial art.

Learning Outcomes

Students completing concentrations in FINE AND MEDIA ARTS will:

- Articulate the formal qualities of the various fine and media arts.
- Show competence in one or more areas of the fine or media arts
- Develop a cohesive body of work and articulate its concepts and methods of production
- Write creatively and critically about the arts and understand research methods and principles
- Read critically and interpret art historical texts and art criticism.
- Understand and articulate the interrelationship between the arts.
- Describe the fine and applied arts in relation to history and culture.
- Analyze, interpret, and evaluate their own and others art works.
- Apply the principles and concepts of the field(s) to new situations.

Experiential Learning Components - Required

At the course level: Studio Courses are immersive and experiential in nature. The studio classroom requires hands-on involvement in the practice and efforts toward mastery of various media resulting in a portfolio or body of work at the conclusion of each term. Singular and group critiques (both received and given) are a regular part of the studio pedagogy. Art History assignments are often project based, replicating museum or gallery practice, or reinforcing concepts crucial to developing the visual and discipline-based vocabulary essential to the study of art and visual culture.

Internships are strongly encouraged and can be substituted for a studio art or art history course at the intermediate (2000,3000) level.

CAPSTONE: 3 Courses (10 Credits)

Themes in Fine and Media Arts Topics (4 credits) is an interdisciplinary capstone class that allows students working in range of media and in both concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments encourages students to broaden their perspectives on art and art

making. Emphasis is also placed on professional studio practice, skilled execution, and self-direction.

Senior Project (4 credits) consists of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. Students produce a minimum of six to ten presentation quality and/or exhibition ready works. The project usually culminates at the end of the senior year with an exhibition.

Professional Practices in Art (2 credits) provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. In addition to gallery, studio and museum visits, and practical assignments relating to a career as a professional artist, designer or curator, students expand their professional experience by applying for competitive exhibits or participating in internships, community involvement and other related visual arts opportunities. In addition, the Signature Experience for all majors is embedded in this course. Students spend 2-3 days together at an urban destination and visit galleries, artists' studios, museums, design and photography studios to gain an understanding of the profession.

Other Experiential Learning Opportunities - Not Required - Highly Recommended

Senior Exhibition (4 credits) focuses on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Working collaboratively, students organize and present an exhibition of the work they produced for their senior project.

Experiential Learning Opportunities at the Program Level:

Annual Student Art Exhibition: Student work from all courses is exhibited in the Chester Gallery (yearly Student Exhibition) and at the Simon Center gallery (on a regular basis). Students work is selected by faculty for inclusion in these exhibitions.

Fieldtrips: Students across the art curriculum participate in field trips to art museums and galleries through their art history courses, in combination with studio courses and as members of the Student Art Association. In addition, students visit artists' studios, or are visited by artists in the art and art history classrooms when appropriate.

Study Away opportunities: Short and long term- are strongly encouraged.

Foundation Review: All students participate in the Foundation Review which replicates the artist critique encountered in graduate school and at the professional level. This takes place in Spring

semester of a student's second year, or after 20 credits in the major. It requires portfolio preparation with a written and oral statement before the entire Art faculty.

Gallery: Some students are involved beyond their regular course work in installation processes and related activities of the New England College Gallery. Work study opportunities are available as are internships.

Internships: Qualified students will be encouraged and invited to apply for competitive internships at local museums and galleries, including the Chester Gallery. Various offices on the NEC campus also provide photography and design internships.

Travel Opportunities (Immersion): Art faculty periodically lead college funded trips abroad during March break.

Major

Art Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses

First Year

Fall

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

Spring

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

LAS 2 (LAS 1120) - The Civic Environment - Democratic Values

An introduction to understanding the values and ideals of democratic thought and the challenges of pluralism.

In this seminar students will begin the work of how to understand the differences in human culture, values, customs, in the context of a shared humanity. With a focus on the civic environment this seminar works toward an understanding of diversity that strengthens an appreciation for democratic values and institutions as understood and articulated in The Universal Declaration of Human Rights. LAS 2 is designated as a writing-intensive General Education course. *(4 Credits)*

- Fine Arts or Media Arts Studio
- Elective

Second Year

Fall

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

MT 1100 - Quantitative Reasoning

The goal of this course is to develop students' ability to think critically about quantitative statements and information. In this course, students will have opportunities to evaluate the strengths and weaknesses of numerical evidence and logical arguments, to apply mathematical methods in the context of real-world problems, and to study and employ strategies and methods for how to manipulate, understand, analyze, and interpret quantitative information. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. Students who do not need to take a higher level mathematics course should find this an interesting way of meeting the Quantitative Literacy requirement. *(4 Credits)*

- Fine Arts or Media Arts Studio
- Elective

Spring

LAS 4 (LAS 2120) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through

critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

- Fine Arts or Media Arts Studio (outside of chosen concentration)
- Elective
- Elective

Third Year

Fall

- Art History (2 credits)
- Fine Arts or Media Arts Studio
- Elective
- Elective

Spring

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. *(4 Credits)*

LAS 7 (LAS 3110) - Global Perspectives

LAS 7 (LAS 3110) is the final seminar in the LAS Core Curriculum, bringing issues that affect the natural and civic environments into global perspective. Building on previous LAS seminars, it is the culminating course within the general education program, and will involve high levels of analysis and critical reflection on global issues that impact the human race and the biotic community of which we are a part. While LAS 7 may take its direction from a particular discipline, the seminar will include a multi-disciplinary approach to finding local, as well as national and global solutions to our most pressing challenges. LAS 7 is designated as a writing-intensive General Education seminar. *Prerequisites: LAS 5 (4 Credits)*

- Art History (2 credits)

AR 4510 - Professional Practices in Art

Professional Practices is designed to provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. Students will be exposed to a variety of career and graduate school opportunities, and learn how to present themselves and their work in a professional manner. Written support materials, successful documentation of their visual product, visiting artist and art professional presentations, class lectures, research assignments and professional exercises will allow the student to acquire an expansive understanding of the professional artist's role and opportunities. Students will be expected to expand their professional experience through competitive exhibits, internships, community involvement and other related visual arts opportunities. *Prerequisites: 46 Credits Earned Offered every Fall. (2 Credits) Required course for all art majors.*

- Fine Arts or Media Arts Studio

Fourth Year

Fall

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

- Elective
- Elective

Spring

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

Core Capstone Courses

AR 4440 - Fine and Media Arts Topics

This interdisciplinary capstone class allows students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisites: 3000 level Fine Arts or Media Arts Course Offered each Fall. (4 Credits) May be repeated for credit. Required course for all art majors.*

AR 4510 - Professional Practices in Art

Professional Practices is designed to provide students with knowledge and practical field experience necessary for the promotion and development of a professional career in the visual arts. Students will be exposed to a variety of career and graduate school opportunities, and learn how to present themselves and their work in a professional manner. Written support materials, successful documentation of their visual product, visiting artist and art professional presentations, class lectures, research assignments and professional exercises will allow the student to acquire an expansive understanding of the professional artist's role and opportunities. Students will be expected to expand their professional experience through competitive exhibits, internships, community involvement and other related visual arts opportunities. *Prerequisites: 46 Credits Earned Offered every Fall. (2 Credits) Required course for all art majors.*

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

Art History Course Requirements

Select 8 credits from the following list:

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

AR 2230 (HS 2230) - History of American Art and Architecture

What is "American" about American art? How do the political, social and cultural events and ideals of an era shape the art and artists that emerge from it? This course will examine the visual culture of the United States from the colonial period through the early twentieth century. We will

study art and architecture made in America as a reflection of its social, political, economic and cultural values. *Seven week course. Offered every fourth year. (2 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

AR 3110 - Themes in Modern Art

A study of major movements and artists in Europe from 1860 to 1940, and in America from 1940-1970s. Emphasis is on significant artists, art theories and visual images as a reflection of, and reaction to, changes in modern civilization. *Offered every Spring. (2 Credits) Seven week course.*

AR 3120 - Themes in Photography

This course covers a broad historical survey of photography as we study the major artists and innovations of the medium of photography and its impact on art and society. We will learn the vocabulary of photography and study the technical innovations that have led us to the digital image of today. Students will learn to evaluate and discuss a wide range of photographs as documents, as aids to artistic production and as art works. *Offered every Spring. (2 Credits) Seven week course.*

AR 3220 - Renaissance Art

This course surveys the painting, sculpture and architecture produced in Italy and in Northern

Europe from approximately the thirteenth through sixteenth centuries, situating the art within a discussion of its social and artistic contexts. The Humanism of Renaissance Italy and its connection to the art and culture of antiquity will serve as focal point for an exploration of civic responsibility and its expression in art and architecture. *Offered every four years. (2 Credits) Seven week course.*

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites:* AR 2520 or AR 1240/CO 1240. *Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4810 - Directed Study in Art or Art History

Course of study to be arranged between faculty and student in the field of Art. *Variable credit, depending on contract. Permission of instructor required Variable credit: 1-4 May be repeated for credit.*

AR 4910 - Internship/Apprenticeship in Art/Art History

Students who meet requirements for admission to the College Internship Program may acquire practical experience in a variety of settings (e.g. artists' studios, museums, commercial galleries, art organizations) under the supervision of a qualified professional and a member of the art faculty. *College requirements for eligibility for intership met. Variable credit: 1-16 May be repeated according to college guidelines. Only 4 credits may be substituted for studio art or art history requirement. Permission of advisor and appropriate faculty member required.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites:* 8 credits at 3000 level Studio Art or Art History. *Variable Credit: 1-4 Credits May be repeated for credit with different topics.*

Fine Arts Concentration Requirements

Select 16 credits from the following list:

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

AR 2120 - Intro to 3-D Design & Sculpture

A Studio course dealing with the fundamentals of three-dimensional design and sculpture. This course will help students develop an understanding of the interaction of forms in nature and space. Students will explore and examine basic and common approaches used for integrating disparate parts into a cohesive whole. *Offered every Spring. (4 Credits)*

AR 2612 - Painting I

This course is an introduction to the fundamentals of oil painting. The course will emphasize observation and use of color, technical control, and expressive use of the oil painting medium. *Prerequisites: AR 1610. (4 Credits)*

AR 2314 - Printmaking Studio I

This course is designed to introduce the student to a wide variety of traditional and non-traditional printmaking processes including relief (lino and woodcut, collagraph), intaglio (drypoint and etching) and monotype. Comprehension of techniques and materials and their relationship to the printed image and visual concepts will be emphasized. *Prerequisites: AR 1610. Offered every Spring. (4 Credits)*

AR 2610 - Drawing Studio I

Students will investigate meaning and content in drawing by exploring a range of themes and various modes of drawing. While continuing to consolidate fundamental drawing skills, students will develop the techniques needed for effective visual expression in one or more drawing media. Course components may include study of the human figure, nature studies, the landscape, narrative drawing, imaginative and conceptual approaches to image making. Assignments may range from daily sketchbooks to completed series of works, research to develop both content and imagery and the research of the relevant work of contemporary artists and historical works of art. *Prerequisites: AR 1610. Offered every Fall. (4 Credits)*

AR 3511 - Sculpture / 3D Design II

A continuation of the concepts introduced in AR2120 Sculpture / 3D Design I with an emphasis on aesthetic and expressive concerns of sculpture, emphasizing the basic forming processes: modeling, building, casting and carving. *Prerequisites: AR 2120. Once every 2 years. (4 Credits)*

AR 3612 - Painting II

A course designed to strengthen the fundamental skills of oil painting introduced in Painting Studio 1. Students will be encouraged to explore personal imagery and style. *Prerequisites: AR 2612. (4 Credits)*

AR 3313 - Printmaking II

This course introduces more advanced techniques and skills of printmaking as a fine art medium. Includes developing a deeper understanding of visual concepts as they relate to prints. Students are encouraged to work in a variety of print processes and processes in combination. *Prerequisites: AR 2314. Offered every other Spring. (4 Credits)*

AR 4650 - Structured Studio

This advanced course offers students the opportunity to utilize the skills acquired in their discipline of choice to gain further technical competency while applying these skills to a series of structured assignments that allow them to develop conceptually and discover their personal

artistic voice. Students are expected to be more self-directed and take initiative as they address idea-based, generative exercise assignments to create portfolio ready work. Students will need to conceptually defend their work orally and in written form to successfully complete this course. Prerequisites: Studio courses in the discipline of choice at the 2000 and 3000 level. (4 Credits)

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites:* AR 2520 or AR 1240/CO 1240. *Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4810 - Directed Study in Art or Art History

Course of study to be arranged between faculty and student in the field of Art. *Variable credit, depending on contract. Permission of instructor required Variable credit: 1-4 May be repeated for credit.*

AR 4910 - Internship/Apprenticeship in Art/Art History

Students who meet requirements for admission to the College Internship Program may acquire practical experience in a variety of settings (e.g. artists' studios, museums, commercial galleries, art organizations) under the supervision of a qualified professional and a member of the art faculty. *College requirements for eligibility for intership met. Variable credit: 1-16 May be repeated according to college guidelines. Only 4 credits may be substituted for studio art or art history requirement. Permission of advisor and appropriate faculty member required.*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with

the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites: 8 credits at 3000 level Studio Art or Art History. Variable Credit: 1-4 Credits May be repeated for credit with different topics.*

Fine Arts Concentrates

Select one course (4 credits) from the list of Media Arts courses.

Media Arts Concentration Requirements

Select 16 credits from the following list:

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1990 - Introductory Topics in Art and Art History

The study of a selected topic in art or art history at an introductory level. *(Credits 2-4) Various topics may be repeated for credit.*

AR 2414 - Graphic Design I

This course builds on skills acquired in the Design Fundamentals course. It focuses on the elements and principles of graphic design with an emphasis on visual communication. Design concepts and use of graphic elements as a communication tool will be explored. Students will be introduced to the basic concepts of visual communication through a series of projects that pertain to conceptual development, design tools and techniques. *Prerequisites:* AR 1110. *Offered every Fall. (4 Credits)*

AR 2710 - Photography II

Building on the skills acquired in Introduction to Photography, students will learn more advanced image capture and processing techniques to produce a professional style portfolio of work. Students will also survey various avenues for photography as a profession ranging from studio lighting, portraiture, photo-illustration as well as fine art photography. A digital Single Lens Reflex camera with a minimum of a 10 mega-pixel image sensor is a requirement for this class. *Prerequisites:* AR 1710. *(4 Credits)*

AR 3414 - Graphic Design II

A graphic design course covering a wide range of design processes and approaches to publication design. Students will expand their vocabularies in visual communication and explore the principles of design as they relate to layout, composition and production. *Prerequisites:* AR 2414. *Offered every Spring. (4 Credits)*

AR 3990 - Intermediate Topics in Art and Art History

The study of a selected topic in art or art history at an intermediate level. *Prerequisites:* AR 2520 or AR 1240/CO 1240. *Variable Credit : 2-4 May be repeated for credit with different topics.*

AR 4650 - Structured Studio

Permission of advisor and appropriate faculty member required.*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

AR 4990 - Advanced Topics in Art or Art History

Study of a selected topic in art or art history at an advanced level. *Prerequisites: 8 credits at*

3000 level Studio Art or Art History. Variable Credit: 1-4 Credits May be repeated for credit with different topics.

CO 3210 - Video Production I

Students learn basic strategies of shooting, sound recording and editing digital video to create short quality productions. Through hands-on experience and learning from professional video analysis, you will be able to understand and practice the fundamental elements of this ultimate communication tool. Video production is rarely a solo endeavor so you will learn the ins-and-outs of a production team and will take on all necessary roles. A video camera or still camera with video capacity is suggested but not required. *(4 Credits)*

CO 3220 - Video Production II

Building on the skills acquired in Video Production I, students learn advanced strategies for shooting, sound recording and digital editing. A greater emphasis will be made on lighting and sound editing in order to acquaint you with industry standards. The two central projects will cover a broad range of skills. The first, an art-based project that will explore alternative narrative and expression. The second, a documentary-based project will hone your skills in this reality-based genre that nevertheless requires the abilities of a consummate storyteller. A video camera or still camera with video capacity is strongly suggested. *Prerequisites: CO 3210. (4 Credits)*

Media Arts Concentrates

Select one course (4 credits) from the list of Fine Arts courses.

Foundation Review

* In order to continue in the major, all studio art majors are required to submit portfolios of work from all art courses for review by the art faculty by the end of their second year in the program (fall of Junior Year for Junior year transfer students). The purpose of the Foundation Review is to identify, early in the student's career, potential strengths and weaknesses, to provide students with an opportunity to solicit opinions from and exchange ideas with professors outside their areas of emphasis and to assist the student in clarifying goals. Students must participate in and pass the Foundation Review in order to continue in the major.

Fine Arts Concentration - Suggested Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

Note:

ALL COURSES ARE 4 CREDITS EXCEPT WHERE NOTED

First Year

Fall

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

- LAS 1010 (LAS 1)

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in

the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

Core Requirement:

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

- Quantitative Literacy Requirement

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

Required

AR 4440 - Fine and Media Arts Topics

This interdisciplinary capstone class allows students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisites: 3000 level Fine Arts or Media Arts Course Offered each Fall. (4 Credits) May be repeated for credit. Required course for all art majors.*

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision

to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

- Electives (6 credits)

Spring

Required

AR 4444 - Fine and Media Arts Topics II

This second of a pair of interdisciplinary capstone classes allow students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisite: AR 4440 (4 Credits)*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and

society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

Required

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

Core Requirement

AR 1110 - Design Fundamentals

The course will introduce the student to two-dimensional and graphic design concepts and

principles of visual organization such as line, shape, form, texture, value and color. Knowledge of the terminology, concepts, as well as basic and digital materials utilized in the studio by visual artists will be explored. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

AR 1710 - Photography I

This course will introduce students to the practice of photo-based imagery in the digital age. Through hands-on exercises, group projects and assignments, students will be exposed to the fundamental skills and visual literacy necessary for taking powerful and effective images. Additionally, students will learn how to process and print their work with professional software and equipment. A means of taking images with an 8-megapixel sensor or greater is required. A digital camera with the ability to control aperture, shutter-speed and focus manually is preferred. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS3 requirement.*

- Quantitative Literacy Requirement

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

Core Requirement

AR 1610 - Intro to Drawing

Instruction in the fundamental techniques of drawing. Students explore line, form, value and

composition using black and white media and a range of subjects. *(4 Credits) Required of every art major. Fulfills LAS3 requirement.*

Choice of course

Choice of course from Media Arts Concentration at Studio I level

- Elective (4-6 credits)

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. *(4 Credits)*

Core Requirement

AR 2120 - Intro to 3-D Design & Sculpture

A Studio course dealing with the fundamentals of three-dimensional design and sculpture. This course will help students develop an understanding of the interaction of forms in nature and space. Students will explore and examine basic and common approaches used for integrating disparate parts into a cohesive whole. *Offered every Spring. (4 Credits)*

Choice of course

Choice of course from Media Arts Concentration at Studio I or II

- Elective (4-6 credits)

Third Year

Fall

- LAS 2130 (LAS 5)

Choice of course

Choice of course from Media Arts Concentration at Studio I or II level

Required

AR 3110 - Themes in Modern Art

A study of major movements and artists in Europe from 1860 to 1940, and in America from 1940-1970s. Emphasis is on significant artists, art theories and visual images as a reflection of, and reaction to, changes in modern civilization. *Offered every Spring. (2 Credits) Seven week course.*

AR 3120 - Themes in Photography

This course covers a broad historical survey of photography as we study the major artists and innovations of the medium of photography and its impact on art and society. We will learn the vocabulary of photography and study the technical innovations that have led us to the digital image of today. Students will learn to evaluate and discuss a wide range of photographs as documents, as aids to artistic production and as art works. *Offered every Spring. (2 Credits) Seven week course.*

2 credits each, 7 week courses taken in sequence

Choice of course from Media Arts Concentration at Studio I or II level

- Elective (8-10 credits)

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

Required

AR 4440 - Fine and Media Arts Topics

This interdisciplinary capstone class allows students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisites: 3000 level Fine Arts or Media Arts Course Offered each Fall. (4 Credits) May be repeated for credit. Required course for all art majors.*

AR 4980 - Senior Project in Studio Art

The Senior Project in Studio Art will consist of a self-determined study under faculty supervision to create and develop a body of work for portfolio and/or senior exhibition. A minimum of six to ten presentation quality and/or exhibition ready works is required. The project will include a

short thesis addressing influences, direction, chronology, and working methods. The project will normally be undertaken at the start of the senior year and culminate at the end of the senior year with an exhibition. Senior status *Offered annually. (2 Credits) Required for all art majors.*

- Elective (10 credits)

Spring

Required

AR 4444 - Fine and Media Arts Topics II

This second of a pair of interdisciplinary capstone classes allow students from the range of concentrations in the art department to address topic-based projects from their own unique skill sets and perspectives. Group critiques and collaborative assignments will encourage students to broaden their perspectives on art and art making. Emphasis will also be placed on professional studio practice, skilled execution, and self-direction. *Prerequisite: AR 4440 (4 Credits)*

AR 4985 - Senior Exhibition

This course will focus on exhibition strategies, practices and standards encountered when soliciting opportunities and preparing work for exhibition. Students will gain experience and knowledge regarding exhibition consideration, venues, planning, contracts, design, and marketing and promotion. Selected readings, exhibition analysis and gallery and museum visits will educate students about current trends and related concerns. The course will culminate with the Senior Exhibition. Senior status and permission of advisor and appropriate faculty *Offered every Spring. (2 Credits) Strongly recommended.*

- Elective (10 credits)

Biology

The two main goals of the Biology majors are

1. to prepare majors for graduate education and/or careers in the biological sciences, and
2. to inform students of the methods of science as a tool for understanding the natural world.

Students will study the structure and function of living systems, spanning the range of biological scale from cells to organisms to ecosystems. Through a combination of lectures, extensive laboratory investigations, field work, and opportunities beyond the school, majors study the processes that occur in the natural world and their practical applications.

Recent graduates from our department have successfully entered and completed many graduate and professional degree programs (including ones in conservation biology, environmental engineering, science education, and forensics science) and are employed as scientists and state biologists.

All students in the Biology program begin their training with a common set of core classes that include introductions to biology, chemistry, physics, and math. As a student progresses through this core, in consultation with his or her faculty advisor and the department faculty, they will select a major:

1. B.S. in Biology for students interested in graduate school, careers in biological research, or a broad training in the biological sciences, or
2. B.S. in Health Science for students interested in a career in the health and medical field. See Health Science program of the catalog for details on that major. Each of these majors has a set of courses and electives designed to prepare students for their chosen area of interest.

Learning Outcomes

Students completing the Biology major should be able to:

- Know, understand and apply a broad range of basic biological concepts.
- Master applied laboratory skills.
- Apply mathematics to the field (i.e., statistical analysis).
- Understand the process of science and basic assumptions in the discipline.
- Think critically when reading and writing about research in the field.
- Generate hypotheses, design approaches to test them, and interpret data to reach valid conclusions.
- Communicate knowledge in an effective oral presentation.
- Demonstrate the ability to organize and write quality reports in the sciences.
- Demonstrate the ability to work effectively and responsibly with others.
- Demonstrate adherence to accepted standards of professional and ethical behavior.

As part of the Senior Thesis all majors are required to conduct their own research projects under the guidance of the Biology faculty. Students are also encouraged to engage in more extensive research projects throughout their time in the major. New England College is located in a pristine natural setting with diverse terrestrial and aquatic habitats that are available for research and field

studies. In addition, on-campus facilities and equipment as well as off-campus affiliations are available for student research.

Biology majors encouraged, to participate in internships and/or volunteer to further their career and personal development. There are numerous local internship and volunteers opportunities in private, state, and federal agencies, as well as non-profit organizations.

Any two modules of General Biology (BI 1111-BI 1114) will satisfy the LAS 2130 requirement for students majoring in Biology, Health Science, and Kinesiology.

The Sophomore Review

Upon completion of BI 1111 - General Biology - Biodiversity, Evolution and Ecology to BI 1114 - General Biology - Cellular Biology and CH 2110 - General Chemistry I, all Biology majors will meet with the Biology faculty advisors. The purpose of this review is to identify, early in the student's career, potential strengths and weaknesses, to assist the student in clarifying his or her goals and to advise the student on an appropriate course of study.

Experiential Learning Component

For a science major, the act of doing science is fundamental to fully integrating the content contained in courses. Most of the courses in this major have a laboratory component that stresses experiential learning in the field and/or in the laboratory. These experiences include activities that range from a single laboratory session to an entire year (in the case of Senior Thesis).

Furthermore, several classes include a public presentation component that is either done in the NEC community or even at professional scientific conferences. External funding, such as the current IDeA Network of Biological Research Excellent [NH-INBRE] grant, also facilitates infusion of research into the curriculum, as well as providing research opportunities outside of standard coursework. These research experiences can range from a few hours of work in the lab each week to intensive 10-week long summer research experiences.

Major

Biology, B.S.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Grades of C- or better are required in all courses needed for the Biology major, including chemistry, mathematics and physics.

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems). Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory

exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) *Offered every spring (2 Credits)*

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites: BI 1111-BI 1112. Offered every other Fall. (4 Credits)*

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical

equilibrium, and acid-base and solubility equilibria. *Prerequisites:* CH 2110. *Offered every Spring. (4 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester. (4 Credits)*

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation.

Prerequisites: MT 1510. (4 Credits)

Plus one of the following organismal level courses:

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC greenhouse and those collected in the field from local natural areas. *Prerequisites:* BI 1111-BI 1112. *Offered in odd falls.* (4 Credits)

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs.* (4 Credits)

Plus one of the following micro-level courses:

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls.* (4 Credits)

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

Plus 4 of the following courses

(ones not taken above)

BI 1020 - Foundations of Nutrition

An introduction to the basic concepts of nutrition, their application to the functions of carbohydrates, fats, proteins, minerals, and vitamins; the function and role of nutrients on health; and identification of substances in the diet which may adversely affect the body. *Offered every spring. (4 Credits)*

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall. (4 Credits)*

BI 2040 - Human Anatomy & Physiology II

This is a continuation of BI 2030, Human Anatomy and Physiology I. This course concludes discussion of organ systems in humans, including the senses, hormonal control, and the

integumentary, immune, digestive, urinary, and reproductive systems. *Prerequisites:* BI 1113-BI 1114. *Offered every spring. (4 Credits)*

BI 2070 ES 2070 - New England Natural History

A field and laboratory course emphasizing the diversity of local organisms and their environments. We attempt to cover all major groups (animals, plants and fungi) of both terrestrial and aquatic habitats, in terms of basic structure, relationships, identification, and adaptations. *Prerequisites:* BI 1111-BI 1112 or ES 1110 *Offered in odd falls. (4 Credits)*

BI 3020 - Comparative Animal Physiology

This course examines the functioning of body systems in a wide range of animal groups. Covered topics include nervous and hormonal control systems, cardiovascular physiology, respiration, water balance/regulation, and muscle physiology. The laboratory consists of a self-designed, semester-long set of experiments, culminating in a scientific presentation. *Prerequisites:* BI 1111-BI 1114, CH 2110. *Offered in odd springs. (4 Credits)*

BI 4020 - Evolution

The theory of evolution is the intellectual glue that bonds all the sub-disciplines of biology into a coherent system. The goal of this seminar/reading course is to introduce students to major topics of evolutionary theory. Examined, among other items, are origins of specific adaptations, co-evolution, sex ratios, sexual selection, speciation rates, the origin of life, and major events in the evolution of organisms. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

BI 4910 - Internship

Students are encouraged to seek internships in area hospitals, research facilities, nonprofit organizations, environmental educational facilities, and field studies. Students should work with a faculty sponsor to develop an internship in their area of interest. *A contract is required. Variable credit (1-16) May be repeated for credit*

CH 3310 - Organic Chemistry I

A study of carbon compounds by functional groups including the correlation of chemical and physical properties with structure, reaction mechanisms, and methods of synthesis. The laboratory portion emphasizes the microscale techniques. *Prerequisites: CH 2120. (4 Credits)*

CH 3320 - Organic Chemistry II

A continuation of CH 3310 - Organic Chemistry I. A study of additional functional groups and spectroscopy including IR, UV-VIS and NMR. *Prerequisites: CH 3310 (4 Credits)*

CH 3330 - Biochemistry

This course explores the roles of essential biological molecules focusing on proteins, lipids and carbohydrates. Students examine the structure of proteins, their function, and their association with other molecules. Protein purification and enzyme kinetics will be explored in the laboratory. *Prerequisites: CH 3310. (4 Credits)*

MT 2510 - Calculus I

This is the first course in the study of the calculus of one variable. It covers the concepts of limit and derivative as well as applications of the derivative to curve sketching, optimization, linear approximation, and related rates. The course concludes with an introduction to integration. Calculus I includes applications to real-world problems in physics, biology, chemistry, engineering, and economics. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1510 Offered every year. (4 Credits)*

PH 2220 - General Physics II

A continuation of PH 2210. Topics include optics, thermal physics, electricity and magnetism, waves (especially sound, and light), and nuclear physics. Laboratory work emphasizes data collection, analysis, and interpretation. *Prerequisites: PH 2210. (4 Credits)*

Minor

Biology Minor

- Description and Learning Outcomes

Requirements

A minor in Biology will consist of the following courses:

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology. Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. *(Meets the Second seven weeks of every fall semester). Offered every Fall. (2 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas

exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) *Offered every spring (2 Credits)*

- And at least 16 credits of additional biology courses.

Other Programs

Biology Suggested Sequence of Courses

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

BI 1112 - General Biology - Genetics and Plant Biology

This general biology course module examines the principles of genetics and plant biology.

Genetics topics include structure and function of genes, chromosomes and genomes, recombination and mutation. Plant biology topics include genetics, and structure of stems, roots and leaves as it relates to water transport and photosynthesis. Laboratory work involves plant anatomy and morphology, molecular biology of plants and bioinformatics analyses. (*Meets the Second seven weeks of every fall semester*). *Offered every Fall. (2 Credits)*

- Math as determined by MPA

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (*4 Credits*)

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) *Offered every spring (2 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

- Bio or a general elective

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. *(4 Credits)*

CH 2110 - General Chemistry I

Fundamental concepts and principles for an understanding of chemical phenomena are discussed. Topics include atomic and molecular structure, periodic properties of elements, stoichiometry, gas laws, thermochemistry and chemical bonding. Laboratory work consists of experiments which are largely quantitative. *Prerequisites: MT 1510. Offered every Fall. (4 Credits)*

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC greenhouse and those collected in the field from local natural areas. *Prerequisites:* BI 1111-BI 1112. *Offered in odd falls. (4 Credits)*

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls. (4 Credits)*

- Bio elective

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites:* C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. *Offered every semester. (4 Credits)*

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through

critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

CH 2120 - General Chemistry II

This course is a continuation of CH 2110 - General Chemistry I. Topics covered include intermolecular forces and physical properties of solutions, chemical kinetics, chemical equilibrium, and acid-base and solubility equilibria. *Prerequisites:* CH 2110. *Offered every Spring.* (4 Credits)

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs.* (4 Credits)

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs.* (4 Credits)

- Bio elective

MT 2310 - Statistics

This course is an introduction to statistical reasoning. The emphasis of the course is on the concepts of statistics rather than coverage of traditional statistical methods. Topics include: sampling and experimentation, descriptive statistics, probability, binomial and normal distributions, estimation, single sample and two sample hypothesis tests for means and

proportions, regression and correlation. Additional topics will be selected from: contingency table analysis, multiple regression, and/or ANOVA. Recommended for second-year students. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics pre-assessment. Offered every semester. (4 Credits)*

Third Year

Fall

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

PH 2210 - General Physics I

An introduction to mechanics and the behavior of solids and fluids using algebra. Topics will include kinematics, forces, energy, torque, pressure, and dynamics of an ideal fluid. Laboratories provide the opportunity to explore these concepts through hands-on experimentation.

Prerequisites: MT 1510. (4 Credits)

BI 2020 - Plants and Human Affairs

This course examines the importance of plants in human lives. Plants are sources for food, drugs, medicines, poisons, clothing, shelter, perfumes, cosmetics, paper and have many other uses. We will examine the form, structure, and morphological adaptations of algae, fungi, mosses, primitive vascular plants, gymnosperms and angiosperms. Emphasis is placed on the economic importance of plants in the past and present. Laboratory work utilizes living plants from the NEC greenhouse and those collected in the field from local natural areas. *Prerequisites: BI 1111-BI 1112. Offered in odd falls. (4 Credits)*

BI 3030 - Genetics

Much of modern biology centers on genetics. In this course, all major subdivisions of genetics are covered: Mendelian genetics, chromosome structure and changes, linkage, introductory population genetics, and molecular genetics. The laboratory work includes *Drosophila* genetics and molecular techniques. *Prerequisites:* BI 1111 -BI 1114. *Offered in even falls. (4 Credits)*

- Bio elective

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites:* BI 1111-BI 1112. *Offered every other Fall. (4 Credits)*

Spring

BI 3000 - Careers in Science

This one-credit course is designed to give junior science majors the opportunity to hone the practical skills needed to have a successful career in the sciences. There will be activities addressing: self-assessment of personal attributes, potential career paths, resume and cover letter writing, job searching and interviewing, and graduate school options. *Offered every spring. (1 Credit)*

BI 3020 - Comparative Animal Physiology

This course examines the functioning of body systems in a wide range of animal groups. Covered topics include nervous and hormonal control systems, cardiovascular physiology, respiration, water balance/regulation, and muscle physiology. The laboratory consists of a self-designed, semester-long set of experiments, culminating in a scientific presentation.

Prerequisites: BI 1111-BI 1114, CH 2110. *Offered in odd springs. (4 Credits)*

BI 4020 - Evolution

The theory of evolution is the intellectual glue that bonds all the sub-disciplines of biology into a coherent system. The goal of this seminar/reading course is to introduce students to major topics of evolutionary theory. Examined, among other items, are origins of specific adaptations, co-evolution, sex ratios, sexual selection, speciation rates, the origin of life, and major events in the evolution of organisms. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- Bio elective

BI 2050 - Zoology

This course focuses on the anatomy, classification, adaptive physiology, ecology, and evolution of the major phyla of invertebrate and vertebrate animals. *Prerequisites:* BI 1111-BI 1114. *Offered in even springs. (4 Credits)*

BI 3210 - Microbiology

The course studies the genetics, physiology, and classification of microorganisms. Microorganisms include bacteria, viruses, fungi, protozoa and algae. A special emphasis is placed on disease causing microbes and the interactions between microbes and their environment. Laboratories focus on aseptic technique, safety, microbial metabolism, identification and genome annotation. *Prerequisites:* BI 1111-BI 1114. *Offered in odd springs. (4 Credits)*

- LAS elective

4th Year

Fall

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

BI 4030 - Senior Thesis

This course encompasses a significant independent project that can take the form of a research project, community service project, or extensive literature review. Typically spanning an academic year, the course is usually taken for two credits in both the fall and spring semesters of the senior year, although exceptions are made for projects encompassing summer research projects. During the first semester, students develop a project proposal with relevant background and a plan of implementation. Completion of the project occurs during the second semester. Both semesters include extensive writing and culminating public presentations. *Offered every semester. (4 Credits)*

- Bio or a general elective

BI 4010 - Ecology

This course examines basic principles and factors governing the relationships of organisms to their environment. Topics include abiotic and biotic factors, energy flow, population dynamics, species interactions, species diversity, abundance and community structure. Laboratories provide opportunities to collect and analyze data from field and lab. *Prerequisites: BI 1111-BI 1112. Offered every other Fall. (4 Credits)*

Business Administration

At New England College, entrepreneurship isn't just an academic discipline; it is a way of life. Our knowledgeable faculty are acquainted with the interdisciplinary value of entrepreneurship and integrate it throughout our curricular and co-curricular programs. The skills learned in our

business and management classes are vital for the success of any business -- large or small, local or global, public or private, corporate or not-for-profit.

New England College students learn to recognize, create opportunities, and build the infrastructure to create economic and social value. Our students learn to evaluate viability and drivers of opportunities, develop feasible business models, and take action. We teach both analytical and creative approaches to all aspects of launching, growing, and expanding businesses and organizations. Our entrepreneurship curriculum provides a broad skill-set for business and also provides highly customized paths for a variety of business contexts, including new ventures, socially responsible companies, and family owned businesses. We focus on the creation of social and economic value by developing core capabilities of idea generation, opportunity recognition, acquiring resources, and entrepreneurial management. The skills and competencies gained in the business program at New England College are vital for the success of any business or organization including promising start-ups, corporations, family businesses, nonprofits, or any other setting. Business students will apply the entrepreneurial thought process both academically as well as in real world settings.

Learning Outcomes

The New England College Business Program seeks to guide and develop students into becoming honest, hard-working and thoughtful contributors to the maximization of owners' wealth in businesses and public good in not-for-profit foundations, mindful of the needs and objectives of all organizational stakeholders and in careful consideration of ecological sustainability. Accordingly, the Business faculty seek to develop students' abilities to:

- Conduct themselves and their business to high ethical and professional standards
- Write and communicate effectively
- Problem-solving and the ability to work effectively in teams
- Employ numerical analysis and accountancy in support of decision-making and problem-solving
- Employ technology in pursuit of organizational objectives
- Be familiar with terminology and principles associated with: the legal, social and international environments of business, organizational behavior, management, marketing, finance, strategy, finance, macroeconomics and microeconomics, and information literacy.

Experiential Learning Component

- Community Engagement/Guest Speaker series with Concord Campus , and other local businesses
- Study Abroad opportunities (including "short-study abroad and "study-away" trips)

- Internships are highly encouraged (but not required)
- Close alignment with the Accounting and Sport and Recreation Management majors (sharing many core and elective courses) - encouraging interdisciplinary engagement
- Writing in the major will be emphasized using case study analysis, hands-on projects, and in-class exercises that engage students
- Group projects will encourage the concept of teamwork in a business setting
- Appreciation and enjoyment of nature and the natural setting encouraged through activities outside the classroom.
- Leadership opportunities and community engagement within coursework and local businesses

About the Associate Degree in Business Administration

Business administration is designed to provide each student with an overview of the foundations of management. With purposeful combination of basic management tools and elements from the liberal arts, students will be better prepared for entry level positions.

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule to meet individual interests and goals.

Major

Business Administration, A.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to

evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. (4 Credits)

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. (4 Credits)

Twelve credits from the following list:

Note: Courses which are being used to fulfill discipline-specific requirements cannot count in the additional 12-credit requirement.

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic

awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (*4 Credits*)

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (*4 Credits*)

- LAS 2130

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. (*4 Credits*)

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (*4 Credits*)

MT 1020 - College Algebra

This course is designed for students who need additional preparation for MT 1510 (Pre-calculus). The course will focus on the application of algebra to real world problems including introductory algebra topics such as: factoring polynomials, solving quadratic equations, graphing linear, quadratic, and other polynomial functions, rational functions, and solving systems of equations. Emphasis will be on conceptual understanding, learning in context, and solving real world problems using graphical, symbolic, and numeric representations. This course satisfies the Quantitative Literacy requirement *Offered every semester (4 Credits)*

4 credits from one of the following courses:

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. *(4 Credits)*

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to

acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (*4 Credits*)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (*4 Credits*)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (*4 Credits*)

Twenty additional credits

Twenty additional credits taken from the following disciplines:

- Accounting
- Business
- Economics

General electives

General electives to complete 60-credit requirement.

Business Administration, Accounting, B.A.

- Description and Learning Outcomes
- Business Administration Suggested Course Sequence

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. *(4 Credits)*

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. *(4 Credits)*

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (*4 Credits*)

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. (*4 Credits*)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (*4 Credits*)

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites:* BU 2110, BU 2210 (*4 Credits*)

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status (*4 Credits*)

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills, both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (*4 Credits*)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (*4 Credits*)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and

appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

Accounting

(16 Credits)

The accounting concentration is designed to provide a firm foundation in accounting. The Business Department believes that competence in accounting is fundamental to good management. Expertise will be gained which will open the possibilities for careers in private industry, governmental, or other nonprofit accounting entities. Students wishing to pursue professional certification are advised to meet with their advisor to develop a 4-year plan.

Required courses for the Accounting Concentration

AC 3210 - Financial Reporting I

A study of the theory and practice of the accounting for most balance sheet accounts, revenues, and expenses. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 2210/BU 2210. (4 Credits)

AC 3220 - Financial Reporting II

A continuation of the concepts begun in Financial Reporting I. Balance sheet topics include liabilities like long-term debt, pensions, and leases, along with stockholders' equity accounts. May include other advanced topics. Pronouncements of the AICPA, FASB and other authoritative sources are an integral part of this course. *Prerequisites:* AC 3210 or permission of the instructor. (4 Credits)

AC 3290 - Federal Taxation

A study of the composition of the federal tax law as applied to individuals. Topics include filing statuses, exemptions, basis calculations, capital gains and losses, sale of residences. An important component of the course will be the strategies the taxpayer can legally use to evade or postpone the payment of taxes. An introduction to the tax effects of organizing as a proprietorship, partnership, or corporation will be presented. *Prerequisite: AC 2210/BU 2210 or permission of the instructor. Offered every other year. (4 Credits)*

Plus One elective chosen from:

AC 3230 - Cost Accounting

A study of the concepts, procedures and tools associated with reporting financial data on performance to an organization's decision-makers. Emphasis is on the tools associated with planning, directing, and controlling an organization's activities, all with the goal of performance improvement. Topics include activity based costing, earned value management, and budgeting activities.

Prerequisites: AC 2220/BU 2220. Offered every other year. (4 Credits)

AC 3990 - Topics in Accounting

A changing selection of courses designed to offer a variety of enrichment studies in Accounting. *Offered on a rotating basis. (4 Credits) The course may be repeated for credit with different topics.*

AC 5620 - Government and Non-Profit Reporting

This course covers the environment of government/non-profit accounting and financial analysis,

budgeting control, revenues and expenditures, accounting for capital projects, related account groups, and endowment management to include investments, accounting for business type and trustee activities, issues of reporting, disclosure, and non-profit organizations. *Prerequisites:* AC 3220. *Offered on a rotating basis. (4 Credits)*

AC 5630 - International Accounting

Under the current business environment all businesses, directly or indirectly, compete in the global marketplace. Understanding and awareness of international issues in accounting, therefore, is critical to the education of a well-rounded, competent business student. The International Accounting course provides an overview of and a platform for understanding and discussion of comparative accounting, theoretical as well as practical challenges posed by the global environment. Throughout the course, accounting issues unique to international business activities, are introduced and examined. The topics encompass presentation and probe of issues faced by contemporary global entities in the areas of auditing, Standards, external financial reporting, accounting systems, foreign currency transactions and translations, performance valuation, changes in price levels, controls, taxes and transfer pricing, as well as ethical, social, legal, and cultural considerations. *Prerequisites:* AC 3210. *Offered on a rotating basis. (4 Credits)*

AC 5640 - Auditing & Assurance

This course introduces the student to the audit process, with emphasis on the perspective of management in a CPA firm, but with consideration to internal processes. Topics include implementing control procedures and assessments using both the compliance and management methods. Audit planning, staffing and training are considered. Special topics include enterprise risk management and auditing non-profit and public organizations.

Prerequisites: AC 3210, AC 3220. *Offered every other year. (4 Credits)*

AC 5730 - Accounting for Mergers and Acquisitions

This course focuses attention on all key stages of the M&A lifecycle including conception, planning, the first 100 days post-merger/acquisition, due diligence of intellectual property, and ongoing evaluation and improvement.. *Prerequisites:* AC 3220. *Offered on a rotating basis. (4 Credits)*

BU 3920 - Business Law

An introduction to the nature of law and the judicial system as it affects business. Torts, contracts, proprietorships, agencies, partnerships, and corporations will be considered. (4 Credits)

Business Administration, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (4 Credits)

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. (4 Credits)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (4 Credits)

BU 3310 - Business Finance

This course concentrates on financial principles and their application to typical business problems in the operation of the business enterprise. Time value of money, securities valuation, financial statement analysis, financial planning, asset management, operating and financial leverage and capital budgeting are examined. *Prerequisites:* BU 2110, BU 2210 (4 Credits)

BU 3880 - Legal and Ethical Environment of Business

This course provides an overview of the regulatory, legal, political, and social environment in which business operates. Emphasis is placed on how the legal environment influences decision-making. This course will present such topics as the legal system, anti-trust, consumer and administrative law, and the role of stakeholders in the decision-making. Special emphasis will be placed on the ethical environments of business as well as an examination of how businesses interact with their social environments, including on-line social environments. This course will begin with a review of legal systems and the U.S. Constitution. Sophomore status (4 Credits)

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills, both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (4 Credits)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles,

employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. *(4 Credits)*

Business Administration, Marketing, B.A.

- Description and Learning Outcomes

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. *(4 Credits)*

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive

statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (4 Credits)

Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (*4 Credits*)

Required Courses for Marketing Concentration

(*12 Credits*)

The marketing concentration prepares students for careers in advertising, sales, marketing management and marketing research. This concentration focuses on developing strategies to meet the needs and wants of consumers.

Students select three courses from the following list:

BU 3410 - Personal Selling and Client Relationships

This course focuses on direct selling, one of the key elements of marketing promotion. Utilizing a variety of methods, this course provides students with the tools and skills necessary to build

long-term relationships that result in successful sales outside a fixed retail location.

Prerequisites: BU 2220, BU 2510. (4 Credits)

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites.

Prerequisites: BU 2510. (4 Credits)

BU 3540 (SM 3540) - Sport Marketing

This course will examine the role of marketing, services, and sponsorship in sport, recreation, and leisure services. Focusing on the various structures within the sports industry, students will study tactical uses of a marketing mix, for both for-profit and nonprofit entities. Using a text, lecture, discussion, and projects, the class will examine marketing needs from a range of perspectives including large multi-sport corporations to small recreation programs. Additionally, students will engage in a hands-on marketing project, the specifics determined by the needs of the selected entity. *Prerequisites:* BU 2510 Offered every fall. (4 Credits)

BU 3810 (CO 3810) - Advertising and Promotion

This course focuses on the need to advertise, the media, consumer motivation, creating the message, the use of agencies, the design and use of promotion techniques, and the organization and functions of a corporate advertising staff. *Prerequisites:* BU 2510. (4 Credits)

BU 3990 - Topics in Business

A changing selection of courses designed to offer a variety of enrichment studies in Business. Permission of Associate Dean or Accepted into MBA Program (4 Credits) *The course may be repeated for credit with different topics.*

BU 4515 - Enterprise Consulting and Development

This project-based course involves consulting to a specific enterprise and is designed to integrate the various functional areas of business. Students in this course will be expected to work independently and professionally. Senior status is preferred. *Prerequisites:* BU 2510, BU 2210/AC 2210, BU 2220/AC 2220, BU 2410. (4 Credits) *This course may be repeated with permission of the department.*

CT 2750 (CO 2750) - Website Design

This course will explore the information resources on the Web and the best tools to access these resources. It will also introduce students to publishing on the Web. Students will learn HTML (Hypertext Markup Language) and how to design and implement a website while enhancing SEO (search engine optimization) protocol. Students will review and analyze successful websites, design a simple website of their own, and will discuss the reasons websites are successful. Students will create web pages that focus on both the user's needs and the information requirements of content while producing a site that is easy to navigate and quick to download. (4 Credits)

Business Administration, Strategic Sales Management, B.A.

Business Administration, Strategic Sales Suggested Course Sequence

Sales and sales management professionals are in high demand, and long-term job growth prospects are strong. In addition to building a career in sales, the ability to communicate effectively, leverage evolving technology, and build strong relationships among customers and stakeholders are critical elements in almost any successful career. The art and science of selling is a highly marketable and transferable skill set - and a big competitive advantage for your career. Salesmanship is best developed through experience, so students will be exposed to the material through a variety of methods including mock sales scenarios, class projects, and case studies.

Because this concentration relies on graduate level courses as part of the undergraduate program, students wishing to concentrate in Strategic Sales Management must either be accepted into New England College's MBA - program or get permission from the Associate Dean of Management or the Dean of the Undergraduate Program in order to take MG 5360 and MG 6230.

Requirements

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. *(4 Credits)*

BU 2110 - Quantitative Methods in Business

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and

demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

- S.M. Requirements

BU 3410 - Personal Selling and Client Relationships

This course focuses on direct selling, one of the key elements of marketing promotion. Utilizing a variety of methods, this course provides students with the tools and skills necessary to build long-term relationships that result in successful sales outside a fixed retail location.

Prerequisites: BU 2220, BU 2510. (4 Credits)

MG 5360 - Technology and the Art of the Sale

With the growth of social media and the digital age customers now have unprecedented access to information, a new reality that is changing the way salespeople do their jobs. Salespeople must now shift the focus from "selling to serving" customers in order to provide the marginal value necessary to build customer loyalty. In this course students will review the psychology of sales from the perspective of this new reality, exploring how this has shaped buyer behavior. Students will learn how to successfully leverage technology to their advantage and negotiate a sale in this constantly shifting environment. Emphasis will be placed on a range of likely sales venues, ranging from social media to a conference.

Permission of Associate Dean or Accepted into MBA Program 4 credits

MG 6230 - Strategic Sales Management

This course provides students with the tools to develop, implement, and analyze a strategic sales plan. Students will learn how to recognize the strengths and weaknesses of forecasting techniques as well as how to hire and incent a sales force to achieve sales goals. Emphasis will be placed on identification of potential customers and the strategic allocation of resources to effectively reach those customers. Students will review Customer Relationship Management (CRM) Software as well as successful tools for sales negotiations. Eligible students can use the knowledge gained in this course to sit for the Certified Sales Executive exam.

Permission of Associate Dean or Accepted into MBA Program. 4 credits

Associate Degree in Business Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and

responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. (4 Credits)

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

Second Year

Fall

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (4 Credits)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (4 Credits)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and

the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

- Elective

Spring

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (*4 Credits*)

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (*4 Credits*)

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. (*4 Credits*)

EC 2120 - Introduction to Microeconomics

A study of the basic tools of economic analysis and principles necessary to understand and appreciate economic relationships, business behavior, and consumer behavior regarding production, exchange, pricing, and distribution of goods and services amongst various economic agents under free market constraints. Special emphasis will be placed on the areas of supply and demand, market mechanism and equilibrium, marginal analysis, theory of firm, market failure, and applications of microeconomics theory. (4 Credits)

- Elective

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

4th Year

Fall

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills, both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (4 Credits)

- Elective or Internship

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (*4 Credits*)

- Elective

Business Administration, Strategic Sales Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. (*2 Credits*)

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

BU 1110 - Business, Innovation and the Entrepreneur

This course is an introduction to the world of business, with a focus on innovation. Traditional topics of accounting, marketing, management, economics, law, and strategy will be examined from the perspective of an entrepreneur and innovative business leader. Students will learn the basics of Excel, and participate in activities that develop the innovative, entrepreneurial mind. Marketing projects, case studies, and accounting projects will be completed culminating in a business start-up presentation. *(4 Credits)*

Spring

BU 2410 - Management in a Global Economy

This course utilizes case studies, projects and small group work to develop an understanding of

how organizations negotiate management of human capital in a dynamic global environment. Students learn the basic language of management and apply critical thinking to solve common problems with managing people in a variety of organizations. Topics covered include vision and mission, intercultural and international human resource management, considering diverse legal, ethical and human rights perspectives. (4 Credits)

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

- Elective
- Quantitative Literacy Requirement

Second Year

Fall

BU 2210 (AC 2210) - Financial Accounting

This course examines basic concepts and principles of financial accounting. After completing the accounting cycle, emphasis is placed on the recording and reporting of financial information conforming to the generally accepted accounting principles published by the Financial Accounting Standards Board, its predecessors, and the Securities and Exchange Commission. (4 Credits)

or

BU 2220 (AC 2220) - Management Accounting

This course shows students how to generate information needed to help managers achieve goals and objectives. Students determine prices for products and services, decide whether or not to acquire equipment, prepare budgets, compare actual performance to budgets, decide what information is relevant to decisions, allocate costs to various activities in the organization, and generate information in support of managerial decisions. Students receive instruction in a computer spreadsheet program and use spreadsheets to facilitate decision-making (*4 Credits*)

BU 2510 - Principles of Marketing

This introductory-level marketing course exposes students to a broad range of marketing functions and theories. Students will develop competency in the methods used for planning, implementing and analyzing marketing strategies. Emphasis is placed on an understanding of the consumer decision-making process and how the marketing mix is created to meet the wants and needs of consumers. (*4 Credits*)

BU 2110 - Quantitative Methods in Business

This introductory course builds the foundation for basic quantitative analysis required for managing profit and not-for-profit organizations. The course is a blend of commonly used topics in business statistics, probability and operations management. Topics include: basic descriptive statistics, probability, expected value, sampling, inference, regression analysis, forecasting, linear programming, customer service, customer & supplier relations, introductory transportation problems, scheduling and project management, and issues in quality control and learn manufacturing techniques. Emphasis is placed on issues in global supply chain management and the role of supply chain management software specifically and as integrated with enterprise software. *Prerequisites: MT 1020 or greater (4 Credits)*

LAS 5 (LAS 2130) - Natural and Biological Sciences

A laboratory science seminar in the natural and biological sciences designed to expose students to the scientific process through laboratory investigation and experimentation, and its application to a specific field of study. (*4 Credits*)

BU 3410 - Personal Selling and Client Relationships

This course focuses on direct selling, one of the key elements of marketing promotion. Utilizing a variety of methods, this course provides students with the tools and skills necessary to build long-term relationships that result in successful sales outside a fixed retail location.

Prerequisites: BU 2220, BU 2510. (4 Credits)

Fourth Year

Fall

BU 4045 - Senior Seminar in Business

This course serves as the senior capstone course in the Business Administration program. A major perspective of this course is to synthesize prior coursework in order to help the student develop an integrated concept of issues affecting contemporary business environments. The effective manager of today and in the future must understand a wide range of technical and social relationships and must be able to integrate them with the expense, performance, and time constraints of their position. The course provides opportunities for students to integrate material and content from previous courses such with analytical techniques and communications skills, both oral and written. The over-arching goal of the course is for students to demonstrate sound capabilities in executing successful strategies in actual and simulated business situations. The emphasis is on understanding and effectively communicating information on issues that affect businesses. Completion of all other BU Major requirements (4 Credits)

MG 5360 - Technology and the Art of the Sale

With the growth of social media and the digital age customers now have unprecedented access to information, a new reality that is changing the way salespeople do their jobs. Salespeople must now shift the focus from "selling to serving" customers in order to provide the marginal value necessary to build customer loyalty. In this course students will review the psychology of sales from the perspective of this new reality, exploring how this has shaped buyer behavior. Students will learn how to successfully leverage technology to their advantage and negotiate a sale in this constantly shifting environment. Emphasis will be placed on a range of likely sales venues, ranging from social media to a conference.

Permission of Associate Dean or Accepted into MBA Program 4 credits

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

- S.M. Concentration Course

Spring

- Elective or Internship

MG 6230 - Strategic Sales Management

This course provides students with the tools to develop, implement, and analyze a strategic sales plan. Students will learn how to recognize the strengths and weaknesses of forecasting techniques as well as how to hire and incent a sales force to achieve sales goals. Emphasis will be placed on identification of potential customers and the strategic allocation of resources to effectively reach those customers. Students will review Customer Relationship Management (CRM) Software as well as successful tools for sales negotiations. Eligible students can use the knowledge gained in this course to sit for the Certified Sales Executive exam.

Permission of Associate Dean or Accepted into MBA Program. *4 credits*

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

Chemistry

Communication Studies

Communication Studies examines the ways in which social meanings are produced through the creation, mediation, and reception of messages. Students may focus in Media Studies, Journalism, or Public Relations and Advertising, or devise their own area of concentration. This major offers both practical training in the use of media technologies and communication strategies, as well as critical and historical perspectives on media and communication. Students in this major learn to gather, analyze, organize, and present information in a clear and engaging fashion. In addition to course work, students may gain practical experience through the college newspaper, radio, commercial magazines, and professional internships.

Learning Outcomes

Upon completion of the Communications Studies program, students will be able to exhibit:

- Clear and effective writing skills
- Strong oral communication skills
- Strong interpersonal skills
- Strong intrapersonal skills
- Strong critical thinking skills
- Competent research abilities
- Media Literacy
- Ecological Literacy
- Engagement in experiential learning

Internships

Students are encouraged to consider an internship as part of their communication study at New England College. Internship opportunities exist in the areas of radio and television broadcasting, public relations, video production, new media, newspapers, for-profit and non-profit organizations.

Semester Abroad Recommendation

International affairs and first-hand knowledge of other cultures is increasingly significant to communication studies majors. We therefore recommend that students in the communication

program consider taking one semester or more at a foreign study program offered by New England College. In the semester abroad program, students may fulfill some of their major requirements as well as general education requirements.

Experiential Learning Component

The Communication Studies Program provides experiential learning through participation in media professions such as journalism, public relations, advertising, video and radio production, and media practices such as video production, audio production/podcasting, social media, radio broadcasting, public speaking, and writing for journalism, PR, and advertising. The core immersion experience for many Communication Studies majors is contributing to *The NewEnglander*, NEC's college newspaper, and/or WNEC, the college radio station. PR and advertising students often work for campus organizations and events. An internship or practicum is also a requirement for the major.

Major

Communication Studies, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(40 Credits Total)

Students may not earn below a grade of C- in the required Core or Elective courses.

Communication Core Courses

CO 1010 - Introduction to Communication Studies

This introduction to communication study explores interpersonal theory, ethics, language and meaning, nonverbals, perception, questioning and listening, and public speaking. The course requires both individual and small group work in designing three presentations. (*4 Credits*)

CO 1240 (AR 1240) (WS 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be emphasized and examined through the study of pertinent issues in contemporary society, with special focus on the natural and civic environment. Students will develop the skills of formal, critical and contextual analysis that are crucial for those interested in a career in the arts, communication and/or media. Trips to museums and galleries, visits with local artists and hands-on activities will familiarize students with the practices of the disciplines and their place in the world today. *(4 Credits)*

CO 3410 - Freedom of Speech

Freedom of speech is a fundamental right guaranteed by the first amendment of the U.S. Constitution. As such, it operates as an ideal, principle, and guide. However, the actual practice of this ideal, while codified into laws, is influenced by power, social inequality, and circumstance. This course surveys the ideal and actual practice of free speech. Particular attention is also paid to seminal court cases and ethical dilemmas that have shaped our views of freedom of the press. Topics explored in this course include Enlightenment rationality and freedom, democracy and citizenship, civil rights and dissent, media monopoly, free speech during wartime, and freedom in non-U.S. countries. *(4 Credits)*

CO 4430 - Senior Seminar

The senior seminar is designed to prepare students for life after college, giving them a deeper sense of who they are and what they have to offer to others in their personal, work, and community lives, as well as in their roles as citizens of the world. Practical skills like resume writing, searching for a job, and interviewing are also explored. *Prerequisites: 70 Credits Earned. (4 Credits)*

CO 4910 - Internship in Communication Studies

Internship and practicum opportunities exist in the areas of radio and television broadcasting, public relations, advertising, video production, new media, newspapers, and for-profit and non-profit organizations. *Variable Credit - (1-16)*

CO 4920 - Practicum in Communication Studies

Internship and practicum opportunities exist in the areas of radio and television broadcasting, public relations, advertising, video production, new media, newspapers, and for-profit and non-profit organizations. *Variable Credit - (1-16)*

Communication Electives

- A minimum of 20 elective credits with the CO designation.

Note:

Students wishing to incorporate relevant courses from other departments into their major should use the substitution waiver form.

Minor

Communication Studies Minor

- Description and Learning Outcomes

The Communication Studies minor consists of a minimum of 20 credit hours that show a balanced distribution between beginning and advanced courses. Depending on the choice of courses, a student may develop a minor focused on media studies, journalism, public relations and advertising, or some other combination of courses (radio, media criticism, public speaking, sport communication, etc.).

Requirements

(20 Credits)

- 8 credits with the 1000 and 2000 level CO course designation
- 8 credits with the 3000 and 4000 level CO course designation.
- 4 credits with a CO course Designation.

Other Programs

Suggested Course Sequence for Communication Studies Program

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year, below is a suggested course sequence for the major:

Suggested Sequence of Courses:

First Year

Fall

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

Topics explored in this course include Enlightenment rationality and freedom, democracy and citizenship, civil rights and dissent, media monopoly, free speech during wartime, and freedom in non-U.S. countries. *(4 Credits)*

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. *(4 Credits)*

- Elective

4th Year

Fall

CO 4430 - Senior Seminar

The senior seminar is designed to prepare students for life after college, giving them a deeper sense of who they are and what they have to offer to others in their personal, work, and community lives, as well as in their roles as citizens of the world. Practical skills like resume writing, searching for a job, and interviewing are also explored. *Prerequisites: 70 Credits Earned. (4 Credits)*

Computer Information Systems

Program Description:

This program is designed to prepare graduates to work in a variety of computer and data related fields. Students will build foundational knowledge in systems that are:

- a) within the requirements of budgetary constraints
- b) incorporate ethical and legal considerations
- c) meet specific organizational goals for customer service.

This degree path is designed to combine the benefits of a traditional liberal arts college education with the benefits of hands-on training in state-of-the-art computer technology. Through the core

curriculum and the elective offerings graduates will be prepared to plan, design, and optimize scalable software systems and/or mobile applications for use in business environments. This degree is ideal for students who have a technical background and an interest in the theory, practice, art, and science of computer systems and programming.

Revisions to this degree path have been made since it was last listed as a major at NEC. Specifically, business management classes have been replaced with more technical computer technology classes. The intention is to create a more technical degree that explores a greater range of topics within computer information services with less focus on management.

Learning Outcomes:

Students who complete New England College's Bachelors of Science in Computer Information Systems should be able to:

- Apply communication, teamwork, and leadership skills to translate technical information that will help align computer information systems and tools with organizational goals.
- Analyze technical aspects of IT projects and apply project management strategies to meet business needs and organizational goals.
- Apply IT methods and tools to the development of applications and administration of computing system, as well as to the adoption of new technologies in the organization.
- Identify information tools and technologies that may have strategic value for the organization, and manage the implementation of those technologies.

Experiential Component:

This degree path utilizes hands-on training in state-of-the-art computer technology, helping students to build practical skills in the digital economy. Course curriculums are focused on developing these skill sets through relevant projects, so that students gather a thorough knowledge of the theory and technical aspects of a given subject area. In addition, students are encouraged but not required to pursue internships as part of the degree path. Ideas for a signature experience for the major are being discussed.

Major

Computer Information Systems, B.S.

Program Description

Learning Outcomes

Experiential Component

Major Requirements

(44 credits)

CT 1510 - Introduction to Programming Logic and Design

The course will provide the student with knowledge on the principles of programming logic and design. An emphasis will be placed on using the correct rules of program engineering, structure of data, basic algorithms and problem solving in computer programming. A hands-on approach will be used to conceptualize programming concepts and techniques. Additional importance will be placed on understanding the value of creating flowcharts or writing pseudo code and will include top-down program development using algebraic notation, standard control structures, and arrays in an appropriate programming language. The course stresses planning, building, coding, testing, debugging and documenting program applications. Additional programming concepts covered include binary representation, storage, and general architecture and functioning of a computer system. *(4 Credits)*

CT 2430 (BU 2430) - Information Systems in Organizations

This course introduces students to how information technology is used in support of an organization's ongoing strategy development and implementation as well as to provide management with information regarding the organization's performance and in support of decision making. Students will learn about information technology support for customer relationship management, supply chain management, enterprise resource planning, and business intelligence as well as for streamlining operations and fostering innovation. Case studies about developing and implementing information systems will be analyzed for small, large, for profit, not for profit, bricks and mortar, and online organizations. Additionally, hands-on components of this course will focus intensively on current software used in a variety of business environments, preparing students for upper level courses and today's workforce. *(4 Credits)*

CT 2510 - Object Oriented Programming

This course covers topics in object oriented programming utilizing a variety of visual

programming languages. Major topics include analysis and design, and use of object oriented programming techniques. A hands-on approach will be used to conceptualize programming modeling and techniques such as concepts in classes, inheritance, encapsulation, and abstraction. *Prerequisites: CT 1510 or Permission of instructor. (4 Credits)*

CT 6110 - IT Project Management

This course will examine various techniques used to manage complex projects in the context of overall organizational goals and strategy. The course will examine the roles of team members as well as the impact of team building, planning, scope management, time management, and budgetary constraints. A number to technical tools, e.g. GANTT and PERT charting will be examined. *Prerequisites: CT 2430 (4 credits)*

CT 4540 - Systems Analysis and Design

This course provides a methodical approach to developing computer systems including systems planning, analysis, design, testing, implementation and software maintenance. Emphasis is on the strategies and techniques of systems analysis and design for producing logical methodologies for dealing with complexity in the development of information systems. *Prerequisites: Junior standing. (4 Credits)*

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. *(4 credits)*

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a

variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

(CT5610 & CT5750 are offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Electives:

Choose three from the following list.

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites.

Prerequisites: BU 2510. (4 Credits)

CT 3740 - Java Programming

This course presents basic programming concepts using the Java programming language. Structured and object oriented programming techniques are presented and used to design and implement a variety of programming problems. *Prerequisites: CT 1510. (4 Credits)*

CT 3820 - Programming in C++

This course offers an introduction to the C++ programming language and provides an overview of programming concepts, design and an introduction to coding using the C++ language. The course has a focus on creating working computer programs in C++ and addresses fundamental concepts of analysis, design, testing, and code development. This course will prepare students for focused studies in any programming language. *Prerequisites: CT 1510. (4 Credits)*

CT 3990 - Topics in Computer Systems

A changing selection of courses offering a variety of specialized applications of computer

technology and contemporary situations. *Prerequisites: Permission of instructor. (4 Credits)*
May be repeated for credit with different topics.

CT 4810 - Directed Study in Computer Information Systems

Course of study to be arranged between faculty and student(s) in the field of Computer Information Systems beyond regular course offerings. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract. May be repeated for credit.*

CT 4830 - Independent Study in Computer Information Systems

Advanced, independent study of a specific topic beyond regular course offerings. Course of study to be arranged with a faculty member. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract.*

CT 4910 - Internship in Computer Information Systems

Potential interns must meet the College-wide internship requirements and must be approved by the computer information systems faculty. An internship may be taken by qualified students on a semester, year, or summer basis. *Prerequisites: Permission of instructor, and junior/senior status. Variable credit (1-12), depending on contract.*

CT 4920 - Practicum in Computer Information Systems

The practicum is designed to provide the student with an experiential learning experience in an area within computer information systems based on interest and availability. The practicum can be completed either on- or off- campus. *Variable credit (1-12)*

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will

introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. *(4 credits)*

(CT6670 is offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Minor Requirements

(20 credits)

CT 1510 - Introduction to Programming Logic and Design

The course will provide the student with knowledge on the principles of programming logic and design. An emphasis will be placed on using the correct rules of program engineering, structure of data, basic algorithms and problem solving in computer programming. A hands-on approach will be used to conceptualize programming concepts and techniques. Additional importance will be placed on understanding the value of creating flowcharts or writing pseudo code and will include top-down program development using algebraic notation, standard control structures, and arrays in an appropriate programming language. The course stresses planning, building, coding, testing, debugging and documenting program applications. Additional programming concepts covered include binary representation, storage, and general architecture and functioning of a computer system. *(4 Credits)*

Electives:

Choose four of the following:

CT 2430 (BU 2430) - Information Systems in Organizations

This course introduces students to how information technology is used in support of an organization's ongoing strategy development and implementation as well as to provide management with information regarding the organization's performance and in support of decision making. Students will learn about information technology support for customer relationship management, supply chain management, enterprise resource planning, and business intelligence as well as for streamlining operations and fostering innovation. Case studies about developing and implementing information systems will be analyzed for small, large, for profit,

not for profit, bricks and mortar, and online organizations. Additionally, hands-on components of this course will focus intensively on current software used in a variety of business environments, preparing students for upper level courses and today's workforce. (4 Credits)

CT 2510 - Object Oriented Programming

This course covers topics in object oriented programming utilizing a variety of visual programming languages. Major topics include analysis and design, and use of object oriented programming techniques. A hands-on approach will be used to conceptualize programming modeling and techniques such as concepts in classes, inheritance, encapsulation, and abstraction. *Prerequisites: CT 1510 or Permission of instructor. (4 Credits)*

BU 3530 (CT 3530) - Digital Media Marketing

This course evaluates the influence of the Internet on the world market. Topics covered include Internet applications in obtaining information from governmental organizations, direct marketing of products and services, marketing communication, and establishing marketing sites. *Prerequisites: BU 2510. (4 Credits)*

CT 6110 - IT Project Management

This course will examine various techniques used to manage complex projects in the context of overall organizational goals and strategy. The course will examine the roles of team members as well as the impact of team building, planning, scope management, time management, and budgetary constraints. A number to technical tools, e.g. GANTT and PERT charting will be examined. *Prerequisites: CT 2430 (4 credits)*

CT 3740 - Java Programming

This course presents basic programming concepts using the Java programming language. Structured and object oriented programming techniques are presented and used to design and implement a variety of programming problems. *Prerequisites: CT 1510. (4 Credits)*

CT 3820 - Programming in C++

This course offers an introduction to the C++ programming language and provides an overview of programming concepts, design and an introduction to coding using the C++ language. The course has a focus on creating working computer programs in C++ and addresses fundamental concepts of analysis, design, testing, and code development. This course will prepare students for focused studies in any programming language. *Prerequisites: CT 1510. (4 Credits)*

CT 3990 - Topics in Computer Systems

A changing selection of courses offering a variety of specialized applications of computer technology and contemporary situations. *Prerequisites: Permission of instructor. (4 Credits)*
May be repeated for credit with different topics.

CT 4540 - Systems Analysis and Design

This course provides a methodical approach to developing computer systems including systems planning, analysis, design, testing, implementation and software maintenance. Emphasis is on the strategies and techniques of systems analysis and design for producing logical methodologies for dealing with complexity in the development of information systems. *Prerequisites: Junior standing. (4 Credits)*

CT 4810 - Directed Study in Computer Information Systems

Course of study to be arranged between faculty and student(s) in the field of Computer Information Systems beyond regular course offerings. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract. May be repeated for credit.*

CT 4830 - Independent Study in Computer Information Systems

Advanced, independent study of a specific topic beyond regular course offerings. Course of study to be arranged with a faculty member. *Prerequisites: Permission of instructor. Variable credit (1-4), depending on contract.*

CT 4910 - Internship in Computer Information Systems

Potential interns must meet the College-wide internship requirements and must be approved by the computer information systems faculty. An internship may be taken by qualified students on a semester, year, or summer basis. *Prerequisites: Permission of instructor, and junior/senior status. Variable credit (1-12), depending on contract.*

CT 4920 - Practicum in Computer Information Systems

The practicum is designed to provide the student with an experiential learning experience in an area within computer information systems based on interest and availability. The practicum can be completed either on- or off- campus. *Variable credit (1-12)*

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. *(4 credits)*

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. (4 credits)

(CT5610, CT5750, CT6670 are offered at the graduate level with a prerequisite of 3.0 or higher within the major.)

Accelerated Program Requirements

(BS & MS in Computer Information Systems in 148 credits)

Students wishing to pursue both a BS and MS in CIS can apply to participate in the accelerated masters program. Under this degree path undergraduate students complete 12 MS CIS credit hours while pursuing a BS in CIS. These credit hours will count as required hours for both the BS and MS degree, allowing students to complete a BS and MS in 148 credits instead of 160. Students wishing to pursue this option must have a cumulative GPA of 3.0, approval of the Associate Dean of the Management Division, Dean of Undergraduate Programs, Dean of Professional and Graduate Studies, and acceptance into the School of Graduate and Professional Studies. The three classes that will qualify for dual BS/MS credit are:

CT 5750 - Web Applications and Web Design Development

This course provides an introduction to web-based applications development. Topics include the creation of web sites using web development software and the architectural elements of programming web sites that produce dynamic content. Students will gain familiarity with a variety of programming languages and tools, and will learn methods and tools that are used in the process of developing web-based applications. Prerequisites: CT 1510 (4 credits)

CT 5610 - Database Design

This course introduces database design and creation. Emphasis is on data dictionaries, normalization, data integrity, data modeling, and creation of simple tables, queries, reports, and

forms. Students should be able to design and implement normalized database structures by creating database tables, queries, reports, and forms. (*4 credits*)

CT 6670 - Network Communications

This course undertakes the study of the movement of information (data) from one device to another by means of electrical, optical, radio, or satellite transmission systems. This course will introduce the architecture, concepts, terminology, design, and management issues related to the modern environment of networking and data communications. Various types of networks and communication systems, protocols, regulatory issues, and policies will be explored. Data and network security will be examined. (*4 credits*)

Creative Writing

The goal of the Creative Writing major at New England College is to prepare students for a professional writing career and/or to prepare students for graduate work in the creative arts.

Students will approach Creative Writing as a craft-based discipline rooted in the study of literature and writing. Through genre workshops and literature courses students will gain the analytical, critical and creative skills necessary to develop an informed practice of craft and, as a result, produce original works grounded in the historical and theoretical knowledge of the discipline. In this context, the Creative Writing curriculum emphasizes the authenticity and integrity of public voice.

All students in the Creative Writing program begin with a common set of core courses which introduce, examine and facilitate practice in a variety of creative writing genres. As a student progresses through this core they will, in consultation with the department faculty and their faculty advisor, identify, develop and pursue a full course of study which best serves to facilitate a close examination and revision of their creative work. As part of the Senior Seminar, all majors are expected to compile a professional manuscript in a specific or blended genre which demonstrates their understanding of and dedication to the practice of their craft.

In addition to their coursework, students are encouraged to engage in more extensive learning opportunities such as public readings, internships with regional writing organizations, community literacy projects, and taking on leadership roles with *The Henniker Review*, *The New Englander*, or other regional literary publications. The rich literary tradition at New England College provides superior opportunity for such engagement in the literary arts.

The breadth of curricular approaches offered within this major allows for a significant level of interdisciplinary study. Students who are interested in Creative Writing in conjunction with another major will work closely with faculty advisors in each discipline to develop a comprehensive plan of study that will enhance their knowledge and integrate professional practice in each discipline while completing the individual requirements for both courses of study.

Students interested in a teaching career involving Creative Writing curriculum should consult the Education Department Program in Secondary Education for requirements.

Learning Outcomes

Upon successful completion of the course, students completing the Creative Writing program should be able to:

- Recognize, identify, appreciate and discuss the different genres of writing and their inter-relationship.
- Critically read, analyze, and interpret complex texts be they in prose or verse.
- Effectively participate in peer reviewed workshops.
- Explain with clarify the relation of literature and creative writing to history and culture.
- Identify and discuss literary and artistic movements and their impact on social conditions and other fields of study.
- Use effective rhetorical strategies, along with proper grammar and punctuation, for academic, creative, aesthetic, personal, practical, and social purposes.
- Perform scholarly research using proper documentation and apply the terminology of the field of creative writing and literature with confidence.
- Write creatively and have a distinct personal point of view.
- Apply the principles and concepts of field to new and unexpected situations.
- Appreciate and be able to communicate the aesthetic value and importance of creative writing and literature.

The Henniker Review: The Henniker Review is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication

The New Englander The New Englander is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.

Edge Sports Edge Sports NH is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will

be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Experiential Learning Component

Students are encouraged to engage in more extensive learning opportunities such as public readings, internships with regional writing organizations, community literacy projects, and taking on leadership roles with The *Henniker Review*, *The New Englander*, or other regional literary publications. The rich literary tradition at New England College provides superior opportunity for engagement in the literary arts.

Major

Creative Writing, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

Grades of C- or better are required for any course credit to count toward the major in Creative Writing. Unless otherwise noted, all courses listed are 4 Credits, unless otherwise noted.

All Creative Writing Majors

ALL CREATIVE WRITING MAJORS MUST COMPLETE THE FOLLOWING COURSE REQUIREMENTS

(48 credits)

CW Core Courses:

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites:* WR 1010 and CW 1100. *This course is offered every other spring semester. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

CW 2520 - Performance Practicum

This course works in conjunction with TH 2520 as a seven-week course to put into practice the skills gained in Speech for the Performer. Working with Creative Writing faculty, students work collaboratively with peers to create, publicize and present their work at a public reading at the college. *Offered the second seven weeks of every fall. This course is offered as Pass/No Record.*

CW 4100 - Practicum in Creative Writing

Students are required to take a four-credits Practicum within the following areas listed below. Practicum work at another magazine/organization may be allowed with Creative Writing Department approval. Students will work with a faculty mentor to create an individualized plan for successful completion.

- **The Henniker Review:** *The Henniker Review* is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication.
- **The NewEnglander** *The New Englander* is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and

collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.

- **Edge Sports** *Edge Sports NH* is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Prerequisites: 60 Credits earned. (4 Credits)

CW 4300 - Senior Seminar and Topics

The Senior Seminar course is designed to prepare students for careers in Creative Writing and/or graduate school study. Students are required to complete a professional manuscript of creative work in addition to an annotated bibliography of literature read during their program of study. Specific areas covered in the course also include publishing and career topics applicable to student success. *Prerequisites: 90 Credits earned and one advanced genre workshop. Offered every year in the spring. (4 Credits)*

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

Genre Workshops:

Take two courses from the following list:

CW 2100 - Short Story Workshop

Students submit their own short stories for critical discussion and revision, participate in the

critical discussion of their colleagues' work, and complete a short story portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2110 (EN 3520) - Poetry Workshop

Students submit their own poems for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a poetry portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2120 - Creative Nonfiction Workshop

The Creative Nonfiction Workshop asks writers to examine the relationship of narrative identity in the context of the creative writing process. Specific focus is given to autobiographical consciousness and subtext, the narrative arc and formation of identity of the self and others. Students submit work for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a Creative Nonfiction portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

Advanced Genre Workshops:

Take one course from the following list:

CW 3100 - Advanced Short Story Workshop

Advanced writing students may work with the 2100 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites:* CW 2100 and one of either CW 2110 or CW 2120. (4 Credits) *Not Open for Students Who have taken EN 4540.*

CW 3110 - Advanced Poetry Workshop

Advanced writing students may work with the 2110 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on

publication (publication not required). *Prerequisites: CW 2110 and one of either CW 2100 or CW 2120. (4 Credits) Not Open for students who have taken EN 4520.*

CW 3120 - Advanced Nonfiction Workshop

Advanced writing students may work with the 2120 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2120 and one of either CW 2100 or CW 2110. (4 Credits)*

Literary Movements

Take one course from the following

Take one course from the following 2000 level literary movements courses.

EN 2000 - Topics in Literary Movements

This course will examine the writers and criticism associated with that particular literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 2001 - Topics in Modern Literary Movements

This course will examine the writers and criticism associated with that particular modern literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

- EN 2003 - Topics in Contemporary Literary Movements

EN 2080 - The American Short Story Since 1945

This course is both a detailed survey of the American short story since World War II, and an exercise in creative writing. The student, through rewriting the assigned stories will come to understand the changes in form from the inside out. As such, it offers literary background to

creative writing students. This course satisfies a Creative Writing requirement. *Offered every fall. (4 Credits)*

EN 2140 - Existential Literature: The Individual Against the System

Existential literature dramatically illustrates the human being's confrontation with his/her existence with all its complexities. The emphasis in this course is on well-known existential writers, such as Kierkegaard, Dostoevsky, Kafka, Nietzsche, Ortega, Sartre, Simone de Beauvoir, Neruda, and Camus, but not limited to them. The students will examine how this philosophy has become so closely linked to the almost all artistic works of the 20th Century. *Offered every spring. (4 Credits)*

EN 2850 (EN 3850) - Modernism: Revolt and Discovery

Modernism is an elusive term difficult to define, and even more difficult to confine to a specific time in history. Yet it is universally accepted that some profound changes were already afoot around the turn of the 20th century in the related fields of art and literature, not to mention technology. We will examine what factors contributed to this upheaval of society and the arts. We will discuss what impact these changes have had on our world today. We will do this through carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. *(4 Credits)*

Take one course from the following

Take one course from the following 3000 level literary movements courses.

EN 3000 - Advanced Topics Literary Movements

These courses will offer in-depth studies of specific Literary Movements and will examine the writers and criticism associated with that particular movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits)*

EN 3020 - The Romantic Movement

This course will introduce the students to the movement called Romanticism as it will examine the major works of British literature of the period. It will branch out to include works by European writers of the same period, such as Goethe, Baudelaire, Rimbaud, and Lermontov. *Prerequisites: a lower level literature course, or permission of instructor. Offered every other year. (4 Credits)*

EN 3860 - Post-Modernism: Irony Takes Center Stage

Postmodernism seems to be a self-consciously contradictory phenomenon. It is as much about attitude as it is about negation of attitude. It is about trying to find meaning in a world where none may exist. Postmodernism seems to dominate the period after WWII, and irony dominates most of the works of art and literature of that period. The students will try to find the reasons as to why this may be so, as well as examine what Postmodernism may be heralding for the future by reading and analyzing carefully selected works of art, criticism, literature, and music. *Prerequisites: one 2000 level Literary Movements course. (4 Credits) Not open to students who have taken EN 4860*

Select one course from following:

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

CO 3120 - Journalism: Feature Writing Workshop

Feature articles are longer pieces that integrate research and reporting with stylistic techniques learned from great fiction. The course begins with a month of readings exploring different genres

(travel, sports, music, politics, etc.), styles (profile, personal narrative, etc.), history (new journalists of the 60s and 70s like Thomas Wolfe and Hunter S. Thompson), and craft (feature leads, editing, organization, etc.). Informed and inspired, students then workshop their own articles, receiving constructive criticism from classmates. This course generates dynamic features for the college newspaper, *The New Englander*. *This course is offered every other spring. (4 Credits)*

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

EN 3950 (TH 3950) - Shakespeare

This course studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. This course is team-taught. *Prerequisites: at least a lower level literature course. Offered every other year. (4 Credits)*

Minor

Creative Writing Minor

- Description and Learning Outcomes
(20 credits)

All students must take:

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

CW 2520 - Performance Practicum

This course works in conjunction with TH 2520 as a seven-week course to put into practice the skills gained in Speech for the Performer. Working with Creative Writing faculty, students work collaboratively with peers to create, publicize and present their work at a public reading at the college. *Offered the second seven weeks of every fall. This course is offered as Pass/No Record.*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

Take one course from the following:

Take one course from the following level literary movements courses.

EN 2000 - Topics in Literary Movements

This course will examine the writers and criticism associated with that particular literary movement. Students will become familiar with the cultural, political and creative influences on/of the particular movement being examined. *(4 Credits) (May be repeated with permission)*

EN 2140 - Existential Literature: The Individual Against the System

Existential literature dramatically illustrates the human being's confrontation with his/her existence with all its complexities. The emphasis in this course is on well-known existential writers, such as Kierkegaard, Dostoevsky, Kafka, Nietzsche, Ortega, Sartre, Simone de Beauvoir, Neruda, and Camus, but not limited to them. The students will examine how this philosophy has become so closely linked to the almost all artistic works of the 20th Century. *Offered every spring. (4 Credits)*

EN 2850 (EN 3850) - Modernism: Revolt and Discovery

Modernism is an elusive term difficult to define, and even more difficult to confine to a specific time in history. Yet it is universally accepted that some profound changes were already afoot around the turn of the 20th century in the related fields of art and literature, not to mention technology. We will examine what factors contributed to this upheaval of society and the arts. We will discuss what impact these changes have had on our world today. We will do this through carefully selected texts, art pieces, and music, from Avant-garde, to Cubism, to Surrealism and beyond. *(4 Credits)*

Take two courses from the following:

CW 2100 - Short Story Workshop

Students submit their own short stories for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a short story portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

CW 2110 (EN 3520) - Poetry Workshop

Students submit their own poems for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a poetry portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

CW 2120 - Creative Nonfiction Workshop

The Creative Nonfiction Workshop asks writers to examine the relationship of narrative identity in the context of the creative writing process. Specific focus is given to autobiographical consciousness and subtext, the narrative arc and formation of identity of the self and others. Students submit work for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a Creative Nonfiction portfolio. *Prerequisites: CW 1100 or WR 1010 (4 Credits)*

Other Programs

Creative Writing Suggested Course Sequence

Below is a suggested course sequence for the major. Due to the number of different course options available for fulfilling several requirements in the Creative Writing major, the sequence below has been constructed in a manner that actually presents a series of different paths toward graduation. In light of such variety, it is incredibly important that each student meet with his/her advisor to work out a specific course schedule each year.

First Year

Fall

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their

writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. *(4 Credits)*

- Elective

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project.

These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

Workshop:

CW 2100 - Short Story Workshop

Students submit their own short stories for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a short story portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2110 (EN 3520) - Poetry Workshop

Students submit their own poems for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a poetry portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

CW 2120 - Creative Nonfiction Workshop

The Creative Nonfiction Workshop asks writers to examine the relationship of narrative identity in the context of the creative writing process. Specific focus is given to autobiographical consciousness and subtext, the narrative arc and formation of identity of the self and others. Students submit work for critical discussion and revision, participate in the critical discussion of their colleagues' work, and complete a Creative Nonfiction portfolio. *Prerequisites:* CW 1100 or WR 1010 (4 Credits)

Second Year

Fall

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

Spring

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites: WR 1010 and CW 1100. This course is offered every other spring semester. (4 Credits)*

- Elective
- LAS or Elective
- LAS or Elective

Advanced Workshop:

- 3000 Level Literary Movements Course *or*

CW 3100 - Advanced Short Story Workshop

Advanced writing students may work with the 2100 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2100 and one of either CW 2110 or CW 2120. (4 Credits) Not Open for Students Who have taken EN 4540.*

CW 3110 - Advanced Poetry Workshop

Advanced writing students may work with the 2110 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on

publication (publication not required). *Prerequisites: CW 2110 and one of either CW 2100 or CW 2120. (4 Credits) Not Open for students who have taken EN 4520.*

CW 3120 - Advanced Nonfiction Workshop

Advanced writing students may work with the 2120 workshop and/or independently with a faculty mentor as they work on an individually designed original manuscript with a focus on publication (publication not required). *Prerequisites: CW 2120 and one of either CW 2100 or CW 2110. (4 Credits)*

4th Year

Fall

CW 4100 - Practicum in Creative Writing

Students are required to take a four-credits Practicum within the following areas listed below. Practicum work at another magazine/organization may be allowed with Creative Writing Department approval. Students will work with a faculty mentor to create an individualized plan for successful completion.

- **The Henniker Review:** *The Henniker Review* is an annual literary magazine showcasing regional writers and artists. NEC Students are able to be involved in areas of editing, marketing, design and publication.
- **The NewEnglander** *The New Englander* is New England College's student newspaper. Writers, photographers, and editors are current NEC students who research and collaborate on interesting news, sports scores, and all things NEC. The paper is printed locally and distributed throughout campus for the entire community.
- **Edge Sports** *Edge Sports NH* is a commercial magazine operated by students and distributed through the New Hampshire Department of Travel and Tourism welcome centers. Students will be able to apply knowledge of outdoor sports or sales or writing or photography or PhotoShop and InDesign within the context of a real, operating business model.

Prerequisites: 60 Credits earned. (4 Credits)

Criminal Justice

The criminal justice major emphasizes a multidisciplinary and experiential approach to crime, justice, and the reduction of violence. It is a liberal arts major, requiring students to think critically, contemplate and appreciate alternative viewpoints, and communicate effectively. It encourages students to take both an analytical and experiential approach to criminal justice.

The major shows students the "working side of the street," encouraging them to interact with people on the front lines of the criminal justice system and to confront real-life issues. Courses in the major take students to criminal justice sites, such as corrections facilities, police departments, courts, and community agencies. Many classes include guest speakers who will discuss first-hand experiences with specific aspects of criminality and crime prevention.

Students who complete the criminal justice major may go on to careers in law enforcement, corrections, social services, the justice system, or law. Regardless of student career track, the study of criminal justice provides a deeper understanding of crime and justice in contemporary American society.

Learning Outcomes

Students who graduate with a degree in Criminal Justice should be able to:

- Articulate the purpose, structure, and function of the American criminal justice system, including the roles of its major components, law enforcement, the courts and the corrections system.
- Identify and discuss the foundation of our system of laws.
- Compare and contrast the prominent psychological and sociological theories of crime causation, criminal behavior, crime control, and punishment.
- Explain how the substantive and procedural criminal law affects the practices of law enforcement, the courts and corrections, and the protection of citizens' civil rights and liberties.
- Identify and explain ethical principles applicable to criminal justice professionals and how the concepts of ethics, morality and justice apply to law enforcement practice and the trial process.
- Demonstrate analytical and problem solving skills in reading and writing about issues in law and criminal justice, and, proficiency in the application of principles necessary for competence in the profession.
- Demonstrate an understanding of the basic principles of research by analyzing and applying information gathered from scholarly sources and applying it in a variety of problem-solving and decision-making situations.
- Effectively present the results of research and analysis orally and in writing in a manner that demonstrates competence in the use of standard English conventions, including grammar and other mechanics, organization, and proper attribution.

Experiential Component

In addition to a strong academic foundation, Criminal Justice courses offer a variety of experiences designed to introduce students to professionals in law enforcement, law and corrections and to engage them in the practical aspects of each institution. Frequent guest speakers help students make connections between what they are learning and its application in the real world. Classes may involve trips to state correctional facilities and local trial and appellate courts. Subject-specific classes, such as Criminal Investigations, require students to combine the techniques of crime scene analysis with the principles of criminal procedure, and ultimately demonstrate their knowledge by analyzing a mock crime scene as a final examination. Our internship program has placed qualified students in a variety of State and local law enforcement agencies, with prosecutors and victim/witness coordinators, in juvenile facilities, and at the NH State Prison. Finally, Issues in Professional Practice, the capstone class, requires graduating seniors to interview working professionals in the student's particular area of interest, to research contemporary issues in criminal justice and present their findings at an open forum, and, to participate in a mock oral board (hiring) exercise conducted by a panel of professionals from the criminal justice field. Overall, with a combination of academics and experience, students are well-positioned to succeed in the field.

Major

Criminal Justice, B.A.

- Description and Learning Outcomes
- Suggested Course Sequence

Requirements

(44 Credits)

Students must complete each of the listed Core Courses and two of the electives described below. Students must pass Introduction to Criminal Justice with a grade of C- or higher in order to be eligible to take courses above the 1000 level. A student may not earn more than two grades below a C- within the core requirements for the major.

Criminal Justice Core Courses

(36 Credits)

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. (4 Credits)

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. (4 Credits)

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. Offered every Fall. (4 Credits)

CJ 2320 - Criminal Justice Ethics

This course introduces basic ethical theories, emphasizing how ethical theory can be applied to contemporary problems in law enforcement, corrections and adjudication. Topics covered include criminal justice policy, the ethics of law enforcement, court processes, and corrections. *Prerequisites:* CJ 1110. (4 Credits)

CJ 3010 - Corrections

This course provides an historic and philosophical overview of corrections in America. Students consider the correctional process, the types of detention facilities, and the rights of sentenced offenders. Probation, parole, and rehabilitation programs will also be examined. *Prerequisites:* CJ 1110. (4 Credits)

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites: CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)*

CJ 3210 - Contemporary Law Enforcement

This course examines current law enforcement practices including community policing, theories of incarceration, minority group relations, constitutional issues, and the special problems associated with law enforcement in this decade. *Prerequisites: CJ 1110. Offered every Fall. (4 Credits)*

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites: CJ 1110. (4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

CJ 4000 - Issues in Professional Practice: Criminal Justice

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Criminal Justice. Included is an exploration of future trends and opportunities within the discipline. Students will consider a number of theoretical and practical issues related to practice as a criminal justice professional, including transition to employment, the development of analytic and problem solving skills, and the production and presentation of research which demonstrates proficiency in writing and information literacy. Because the final paper and presentation are essential in demonstrating such proficiency, students must complete the final paper and project with a grade of C- or better in order to pass this course. CJ majors only. *Prerequisites: Minimum 90 credits earned. Offered every spring. (4 Credits)*

Criminal Justice Electives

(8 Credits)

Students may choose any two electives from the following list

CJ 1140 - U.S. Legal Systems

This course provides an introduction to the American Legal System, including its history, philosophy, and practices. Students will consider the structure and function of the legal system, several substantive areas of the law (e.g., torts and contract law), and the dynamic relationship between law and social policy. *(4 Credits)*

CJ 2110 - Criminal Justice Administration

This course is an introduction to the theories and practices of public administration, both generally and in criminal justice agencies. Traditional and contemporary organizational theories and public management issues are examined, including administrative accountability, responsibility and values. *Prerequisites: CJ 1110. (4 Credits)*

CJ 2120 - Gangs in America

Of the variety of criminal justice issues facing American society in the 21st century, none has a greater potential to threaten a free and democratic society than organized crime and gangs. Organized crime and gangs is not an isolated American phenomenon but has global origins and implications challenging all types of societies, economies, political structures, and criminal justice systems as it relates to violence, criminal activity, enterprising, and corruption. This course will offer a historical, sociological, economic, and legal analysis and perspectives of both national and international diversity of gangs in America. *Prerequisites:* CJ 1110 and CJ 1130. *Minimum 30 credits earned. (4 Credits)*

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites:* CJ 1110. *(4 Credits)*

CJ 3110 (PS 3110) - Juvenile Delinquency & Youth at Risk

What makes an at-risk-child become a juvenile delinquent versus a solid citizen? This class looks at developmental, environmental, social and physical/health issues that impact the life of children and influence the direction in which their lives may go. We will discuss relevant political issues, resiliency, education, and medical practices. We will look deeply into the corrections and social services agencies to analyze what is being done as well as what should be or should not be done to change things. The course will challenge your beliefs, ignite your curiosity, and with any luck at all, get you motivated to make a change in someone's life. *(4 Credits)*

CJ 3150 - Victimology

The course examines the role of the victim in the justice system - the evolution of victimology as a separate and distinct discipline and contemporary theories of victimology. To that end, we will consider: victim-offender relationships and victim precipitated crimes; the connection between

demographics and the risk of victimization; the impact of the victims' rights movement on policy and legislation; victims of specific types of crimes such as rape, murder and stalking; the emergence of forensic victimology as an investigative tool; and victims of the criminal justice system-those wrongfully convicted of and imprisoned for crimes they did not commit.

Prerequisites: CJ 1110 Must have completed 30 credits. (4 Credits)

- CJ 3160 - Profiling Criminal Behavior

CJ 3170 (PS 3170) - Forensic Psychology

The goal of this course is to acquaint the student with the different psychological characteristics, levels of motivation, and different prognoses for criminal behavior. Homicide will be presented, not as a unitary event, but as a complex behavior, with different phenomenology, psychopathology, and dynamics. The course focuses on a number of case studies that illustrate the complex psychological issues involved in domestic violence, hate crimes, sexual homicide, and the role of mental illness in crime. In addition, the course covers the relationship of psychology to the practice of law and justice and the role a forensic psychologist plays within the criminal justice arena. Concepts of personality assessment, expert testimony, and profiling of various offenders are discussed. *Prerequisites:* Any 2000-level CJ or PS course. (4 Credits)

CJ 3180 - Criminal Investigations

This course provides an in-depth examination of one of the most critical areas of traditional law enforcement: criminal investigations. Topics include techniques for the collection and preservation of physical evidence, crime scene photography, blood spatter analysis, lifting and storing fingerprints, crime scene reconstruction and the investigative processes applicable to specific crimes. A number of guest speakers, each a law enforcement professional, will enhance students' understanding of the investigative process. *Prerequisites:* CJ 1110, CJ 2320. CJ 2130 Criminal Procedure is recommended. Must have completed 30 credits. (4 Credits)

CJ 3910 (PO 3910) - Terrorism

This course is designed to introduce students to the study of terrorism and its challenges for national security. Students will explore numerous features of the subject including, but not limited to, definitional dilemmas, the origins and evolution of terrorism, tactical and targeting innovation, the psychology and characteristics of terrorist actors and counter-terrorism strategies

employed by the Department of Homeland Security to protect against terrorist threat. Both international and domestic terrorist actors will be explored. *Prerequisites: CJ 1110 or PO 1110. (4 Credits)*

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

CJ 3990 - Topics in Criminal Justice

Special topics in the study of Criminal Justice at the intermediate level. *Prerequisites: CJ 1110 and CJ 1130 (4 Credits) Course may be repeated for credit with different topics.*

CJ 4910 - Internship

Students may complete internships in criminal justice organizations and agencies, or related areas. *Contract and prior approval required. Variable credit (1-16)*

Minor

Criminal Justice Minor

- Description and Learning Outcomes

Requirements:

(20 credits)

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. (4 Credits)

Plus One of the following courses:

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites:* CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites:* CJ 1110. (4 Credits)

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the

document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

Plus Two upper level CJ electives

(at least one course must be at the 3000 level or higher) may be selected from either the courses listed under the **Criminal Justice Core Courses** and/or the courses listed under **Criminal Justice Electives**.

Other Programs

Criminal Justice Suggested Course Sequence

Each student is strongly encouraged to meet with his/her advisor to work out a specific course schedule during the year. Below is a suggested course sequence for the major:

First Year

Fall

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. *(4 Credits)*

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. *(4 Credits)*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

LAS 1110 (LAS 1) - The Natural Environment

This seminar is designed to introduce students to the meaning and purpose of an education rooted in the liberal arts and sciences by presenting the fundamental question that reverberates throughout the program's curriculum, "What does it mean to be human?" LAS 1 seminars represent a variety of disciplines and topics related to the seminar theme. Regardless of instructor or disciplinary focus, each LAS 1 seminar prompts students to think about what it means to be human, individually and collectively. Students will consider what our shared obligations and responsibilities are as human beings, despite differences in race, class, gender, ethnicity, or other factors. *(4 Credits)*

- Elective

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

Spring

LAS 1120 (LAS 2) - The Civic Environment

This course grows out of the foundation provided in LAS 1110. LAS 2 seminars, ideally taken in the second semester, will address human nature in context. Students will ask, what constitutes community and how can diverse communities coexist in a pluralistic world? In addition, the seminar allows for consideration of the role of the 'outsider' or 'other' within communities and society as a whole. With a focus on American culture these seminars will explore how different communities can both succeed within and challenge the principles of democratic society. From the meaning of social identity and difference to the significance of political, professional and religious affiliations, to the facts of disability, discrimination, and prejudice, these seminars will look at the social construction of difference and the challenges and opportunities of diversity. (4 Credits)

CJ 1110 - Introduction to Criminal Justice

An overview and analysis of the key components of the criminal justice system: law enforcement, criminal law and the courts, and corrections. (4 Credits)

CJ 1130 - Criminology

Criminology is the study of the causes of crime. This course will examine the evolution of the predominant theories of crime causation, from the perspectives of choice, biology, psychology and social forces. Students will also consider how theories of crime causation affect social policy and law. (4 Credits)

- Elective
- Elective

Second Year

Fall

LAS 2110 (LAS 3) - The Creative Arts

LAS 3 covers the Creative Arts, exposing students to the innovative, imaginative side of human experience; these seminars are experientially based, promoting individual creativity, aesthetic

awareness, and artistic appreciation. These courses embrace the process of conception, execution, and analysis. Students will leave having created and presented a portfolio of related works. (4 Credits)

- Elective

CJ 3010 - Corrections

This course provides an historic and philosophical overview of corrections in America. Students consider the correctional process, the types of detention facilities, and the rights of sentenced offenders. Probation, parole, and rehabilitation programs will also be examined. *Prerequisites:* CJ 1110. (4 Credits)

CJ 2320 - Criminal Justice Ethics

This course introduces basic ethical theories, emphasizing how ethical theory can be applied to contemporary problems in law enforcement, corrections and adjudication. Topics covered include criminal justice policy, the ethics of law enforcement, court processes, and corrections. *Prerequisites:* CJ 1110. (4 Credits)

CJ 3210 - Contemporary Law Enforcement

This course examines current law enforcement practices including community policing, theories of incarceration, minority group relations, constitutional issues, and the special problems associated with law enforcement in this decade. *Prerequisites:* CJ 1110. *Offered every Fall.* (4 Credits)

Spring

LAS 2120 (LAS 4) - Social Sciences

The social sciences are concerned with relationships among individuals in, and to, a broader societal structure. Born of the Age of Enlightenment, the social sciences seek truth, through critical thinking and the use of scientific methodology, to gain a deeper understanding of the

human experience. Social scientists in the disciplines of criminal justice, economics, history, political science, psychology, and sociology strive to explain the human experience with the goal of improving the social condition. (4 Credits)

CJ 2130 - Criminal Procedure

This course will introduce students to the procedural aspects of criminal law. The focus will be on the Fourth, Fifth, Sixth and Fourteenth Amendments of the Constitution and their application in the criminal justice system from arrest to conviction. Students will examine the evolution and continued interpretation of these amendments by reading and discussing the important US Supreme Court cases that have shaped procedural law. Topics to be covered include search and seizure, exceptions to the warrant requirement, the exclusionary rule, the Miranda decision, confessions and interrogation practices. *Prerequisites: CJ 1110. (4 Credits)*

- CJ or other Elective (4 credits)

Third Year

Fall

CJ 3140 - Criminal Law

This course is designed to introduce students to the substantive aspects of criminal law. Students will examine the origins of criminal law, its role in society and the concept of criminal responsibility. In addition, we will discuss the sources of criminal law; the general principles of criminal responsibility; defenses; the specific element of numerous crimes including homicide, sex offenses, crimes against persons, and property crimes; and, philosophies of punishment; *Prerequisites: CJ 1110 or CJ 1130 and one additional 2000 level CJ course and a minimum 45 credits earned. Offered every Fall. (4 Credits)*

PS 2310 - Statistics for the Social Sciences

The focus of the course is on the application of statistics to answer questions in social science. Students will be introduced to the theoretical aspects of probability, sampling, and hypothesis testing and taught to utilize statistical software for social science research. Topics include data

file creation, data entry, descriptive statistics, basic inferential statistics, pictorial representation of data, and the interpretation of statistical analysis. Students will learn when to use the various statistics (including r , t , F , and χ^2), how to interpret them, and how to write up an APA-style results section. *Offered every Fall. (4 Credits)*

- LAS 2130 (LAS 5) Lab Science
- Elective

Spring

PO 4310 (CJ 4310) - Constitutional Law

This course is designed to study the Constitution of the United States, including the history of the document, the incorporation of the Bill of Rights, and, judicial methods and theories of interpretation. *Prerequisites: PO 1110 or CJ 1110 and minimum of 30 credits. (4 Credits)*

LAS 2140 (LAS 6) - Humanities

These courses develop the student's ability to appreciate beauty and elegance in the search for truth and encourage the ability of the student to connect discrete fields of study by analyzing context and connections. Exposure to the interrelated nature in the fine arts, as well as the performing arts, literature, philosophy, art history, and history enhances the student's understanding of our shared humanity as ethical and creative beings. *(4 Credits)*

4th Year

Fall

CJ Electives or remaining requirements.

LAS 3110 (LAS 7) - Global Perspectives

By addressing global issues that impact the human race and the biotic community of which we are a part, student awareness and critical skills will be heightened in the interest of finding answers to global challenges, and inspiring further inquiry. Ultimately, the purpose of LAS 7, in

combination with all previously taken LAS seminars, is for students to engage multiple perspectives in their quest to understand and define what it means to be human, both individually and collectively, in order that they may demonstrate, in whatever field they pursue, an open-minded, well-informed critical, creative, and ethical perspective - one capable of transforming themselves and others for the greater good as they go on to become citizens of the world. (4 Credits)

Spring

CJ 4000 - Issues in Professional Practice: Criminal Justice

This capstone course prepares students for the challenges and responsibilities of professional practice and study in the field of Criminal Justice. Included is an exploration of future trends and opportunities within the discipline. Students will consider a number of theoretical and practical issues related to practice as a criminal justice professional, including transition to employment, the development of analytic and problem solving skills, and the production and presentation of research which demonstrates proficiency in writing and information literacy. Because the final paper and presentation are essential in demonstrating such proficiency, students must complete the final paper and project with a grade of C- or better in order to pass this course. CJ majors only. *Prerequisites: Minimum 90 credits earned. Offered every spring. (4 Credits)*

Economics

Education

The Study of Education

The study of education at New England College contains two undergraduate options:

1. Educational Communities and
2. Teacher Certification.

Upon entering the Education Program all students are considered to be Education majors. Students choose either the Educational Communities path or the Certification path. In order to apply to the Teacher Certification path students use the process described below. Students who

decide that they want to work in educational settings in roles other than state certified teachers (e.g. teaching assistants, educators in the public sector - a museum, a not-for profit organization, educators in private schools, etc.) may choose the Educational Communities path for their program. Students who choose the Educational Communities portion of the program will work with their advisors to tailor their program to meet their career goals.

New England College's teacher education programs are accredited by the New England Association of Schools and Colleges (NEASC) and the certification programs are approved by the New Hampshire State Board of Education. The teacher certification major is designed for students interested in elementary education, secondary education, general special education, principal (graduate only) or superintendent (graduate only) and who seek certification in New Hampshire and other states. The Educational Communities and certification majors are experience-based programs in which students understand and apply theories of teaching and learning in classrooms and beyond.

Students in the New England College Education program will:

- Learn to become an educator by working in schools, classrooms, and educational organizations through all 4 years of their program.
- Learn how to meet the individual needs of all learners, particularly those with special needs and those who are gifted.
- Create exciting, meaningful, and effective educational experiences that engage learners.
- Work collaboratively with others to identify and take thoughtful and effective action to solve community-based problems.

Learning Outcomes

The teacher certification major is designed for students interested in certification in elementary education, secondary education (Social Studies, English, Life Science, general special education K-12, physical education K-12, theatre education K-12, principal, or superintendent). New England College recommends students for certification in New Hampshire upon successful completion of all degree requirements. Students seeking certification in states other than New Hampshire are guided by the reciprocity agreements between New Hampshire and those states.

Those students who want to experience an educationally related career but who do not wish to become certified teachers may choose to major in Educational Communities. The non-certification program is designed to prepare students who wish to pursue a wide variety of careers in community-based education.

In the New England College program, students:

- gain a strong liberal arts background in English, mathematics, science, civics and government, economics, art, history, and geography;
- demonstrate proficiency in basic skills (reading, writing, viewing, performing mathematical operations, listening, speaking, and use of technology) and thinking skills (creative thinking, decision making, problem finding and solving, visualizing, reasoning, and knowing how to learn);
- develop their personal qualities of responsibility, self-esteem, sociability, self-management, integrity, and honesty;
- plan, implement, and assess teaching and learning in light of local, state, and national standards;
- gather and analyze information sources;
- work and communicate effectively with others to understand, negotiate, and influence complex systems in schools and communities;
- create and manage caring learning environments where students and teachers are active and responsible citizens;
- become agents of change who can effectively identify and meet the needs of diverse learners and communities;
- develop an understanding of and responsibility to the global community;
- assess and apply knowledge and processes to new situations and problems that they encounter; and
- reflect on their practice and commit themselves to life-long learning.

Criminal Record Check

All students engaging in field practica must meet the requirements of the State of New Hampshire criminal record check. See the Administrative Assistant or Associate Dean of Education for details.

What is Teacher Certification?

In New Hampshire, as in most states, graduating from college with a degree in Education is not sufficient to become a teacher in the public schools of the state. One must also be certified to teach. Certification is obtained by meeting various state requirements covering general education (writing, mathematics, and the NEC General Education program) meeting the requirements of a

major, meeting the requirements of an accredited Education Department (such as the one at New England College), and meeting specific state requirements in the particular area of certification (elementary, secondary, special education, etc.) that a student wishes to pursue. These requirements are described below, along with a step-by-step process for being accepted into the Teacher Certification Program. The process may seem complicated, but each Education major at the College is assigned an advisor who will help him/her through the process.

To meet state certification requirements, in addition to meeting the education department's requirements, all Education majors must also complete a content major. To meet state certification requirements, all secondary education majors select from the following list:

English 5-12

Social Studies 5-12

Life Science 7-12

General Special Education certification majors must also major in one of the secondary certification areas or elementary education.

Elementary education majors have their major area of concentration in elementary education and a major area of concentration consisting of a minimum of 24 credits in social studies, English Language Arts, science, or mathematics. The K-8 teacher certification candidate should work closely with his/her advisor to identify appropriate courses to meet this state requirement.

Beginning with the first year, students may obtain practical experience in teaching and working with students; field-based experiences and service-learning are incorporated throughout the professional sequence. The teacher certification major at New England College includes a broad general education background in the liberal arts, integrated with a sequence of professional courses in education. All elementary and secondary education majors are required to take and receive passing scores on the Core Academic Skills Test prior to being eligible to apply to the major and they must take and receive passing scores on Praxis II in order to be eligible for certification.

State of New Hampshire General Education Requirements for Teacher Certification

To comply with New Hampshire general education requirements for teachers, students must successfully complete course work dealing with each of the following areas as stated in the requirements outlined by the New Hampshire State Department of Education: The General Education program shall include these core competencies:

Content competencies in the following areas necessary for college and workforce success:

1. Language arts;
2. Reasoning;
3. Information literacy;
4. Mathematics;
5. Sciences;
6. Social sciences; and
7. The arts;

Creative competencies in the following areas:

1. Creative expression;
2. Critical thinking;
3. Innovative and collaborative problem-solving; and
4. Resourcefulness;

Communication competencies in the following areas:

1. Languages;
2. Digital media;
3. Networking; and
4. Content creation technologies; and

Cultural competencies in the following areas:

1. Cultural understanding;
2. Taking responsibility for self and others;
3. Adaptability and resilience;
4. Ability to engage in productive teamwork; and
5. Social and civic engagement.

The General Education requirements are fulfilled through the General Education program at NEC: WR 1010 - Composition, College Math, and LAS 1 through LAS 7.

Requirements for Acceptance to the Teacher Certificate Programs

STEP ONE

Register for and pass the CORE Academic Skills Test. For information about this test and how to register for it go to <http://www.ets.org/praxis/nh/>

STEP TWO

Enroll in ED 1010 - Teaching Portfolio I. Once successfully completed, enroll in ED 2050 - Teaching Portfolio II. At the conclusion of this class, and providing the minimum requirements for acceptance into the major have been met, the student will submit a completed e-portfolio to the Associate Dean of Education. If all requirements are met, see below, an interview will be scheduled.

Minimum requirements for acceptance are:

- grades of C or better in WR 1010 , or, if the student is a conversion student, grades of C or better in at least one College Writing course;
- a grade of B- or better in ED 1000 Issues in Professional Practice and School Law (undergraduate) or ED 6410 - Dynamics of Educational Reform and Systems Change (including a practicum) (graduate);
- completion of Math 1015 Number Sense (required of elementary education, secondary education English, or social studies, general special education K-12, and theatre K-12 majors), Math 1510 Pre-calculus (required of secondary education life sciences), Math 1000 or above (required of physical education K-12) with a grade of C or better or, if the student is a conversion student, a grade of C or better in a college level math course;
- passing scores on the CORE Academic Skills Test;
- a minimum cumulative grade point average of 2.75 for acceptance into and retention in the teacher certification major (undergraduate); a minimum cumulative grade point average of 3.0 for acceptance into and retention in the Masters of Education and teacher certification program;
- sophomore status (undergraduate) or completion of ED 6410 (graduate);
- have grades of B or better in at least three education courses; and

- permission of the Associate Dean of Education.

Students will present their e-portfolio which will contain at a minimum:

- a copy of the student's transcripts,
- a letter introducing the faculty to the portfolio, what is in it, why the student selected what he/she chose, and points of interest,
- a table of contents (which is generated by e-Folio),
- the Intent to Major in Education form,
- A typed essay sharing the student's reasons for wanting to major in teacher certification and any personal experiences that have led the student to pursue a career in teaching (undergraduates). Graduate students may submit the essay that they included in their application to the Master of Education program,
- at least one letter of recommendation from a faculty member who is not in the Education Department. If the student is a graduate student, he/she may use the letters of recommendation submitted at the time of application to the Master's of Education program,
- a writing sample (each participant will be given one question to which he/she must respond in writing) - this sample must be scanned to be placed e-Folio;
- copies of mid-semester and final evaluations from Practicum experiences;
- at least two writing samples, one should be from a course other than education - graduate students may submit both samples from courses in education; and
- other materials the applicant believes attest to his/her qualifications and ability to major in education such as sample lesson plans, photos, videos of the student teaching a lesson, etc.

The faculty in the Education Department will review the applicant's portfolio and the Associate Dean of Education will notify the applicant of his/her status. Those who are eligible to continue the application process will be invited to make an appointment for an interview. Those who are ineligible to continue or who need to make revisions to their portfolios will be asked to meet with their academic advisor to discuss alternatives.

STEP THREE

The applicant will be interviewed by at least two faculty members. Students will be evaluated for acceptance/retention into the teacher certification program and for recommendation for state certification using the basic criteria as set forth by the State of New Hampshire, which include:

- quality of scholarship;
- leadership potential;
- physical and mental health appropriate to the tasks to be performed;
- acceptable voice and speech characteristics;
- competency in oral and written English;
- competency in mathematics;
- participation in extracurricular activities;
- competency in the major area of study;
- competency in the professional sequence of study;
- successful performance in professional experiences; and
- personal characteristics.

Please Note: In order to be admitted and retained to all phases of the teacher certification program, and finally to the profession, candidates must demonstrate the competencies implicit in the general criteria as stated above.

The applicant will be notified in writing of his/her status after the interview. If accepted, the student must keep the following in mind:

- to be retained in the major the student must maintain a minimum cumulative grade point average of 2.75 (undergraduate) and 3.0 (graduate);
- students are responsible for knowing the requirements that must be fulfilled to be eligible for certification;
- the student must have an academic advisor in his/her major as well as an academic advisor in education; and
- all students must clearly identify their content major - secondary education majors may select English, social studies, life sciences; K-8 certification candidates complete at least 24 credits in social studies, English Language Arts, the sciences, or mathematics; general special education majors must also select elementary education or secondary education

and fulfill all requirements associated with that area of certification. Physical Education K-12 and Theatre Education K-12 must complete all requirements associated with those majors.

Student Teaching

This is a field experience during which the student works as a fulltime supervised teacher in a school near the College. Students must be accepted to the major and obtain the permission of the Associate Dean of Education to enroll in student teaching and they must have taken Praxis II if required for their area of certification prior to being placed for student teaching.

Obtaining Certification

The State of New Hampshire has reciprocity with other states therefore when you receive your New Hampshire certification you can apply for certification in a different state. Please be aware that you may need to take additional tests so it is important to review the requirements for certification for each state in which you want certification.

In New Hampshire all certification candidates must pass the CORE Academic Skills Test and have their scores sent to New England College and the NH State Department of Education. Each certification area has specific testing requirements, which are subject to change at any time. They are as follows:

Elementary Education -

- Core Academic Skills Test,
- Praxis II in Middle School based on your concentration area of social studies, mathematics, sciences, or English Language Arts,
- Praxis II for elementary education, and
- Foundations of Reading Test.

Secondary Education (English, life sciences, social studies. NOTE: Certification in Mathematics is only available for graduate teacher conversion students) -

- Core Academic Skills Test and
- Praxis II based on your area of certification, English, life sciences, social studies. (NOTE: Certification in Mathematics is only available for graduate teacher conversion students).

Theatre Education K-12 -

- Core Academic Skills Test

Physical Education K-12 -

- Core Academic Skills Test and
- Praxis II (when required by the NH State Department of Education).

Special Education K-12 (must have certification in Elementary Education or Secondary Education Secondary Education (English, life sciences, social studies. NOTE: Certification in Mathematics is only available for graduate teacher conversion students) -

- Core Academic Skills Test
- Praxis II based on your area of certification, English, life sciences, social studies. (NOTE: Certification in Mathematics is only available for graduate teacher conversion students)

Post-Baccalaureate Conversion

New England College also offers a postbaccalaureate conversion program to prepare individuals for New Hampshire State Teacher Certification in elementary, secondary (English, Life Science, Social Studies, Mathematics), general special education K-12, physical education K-12, and theatre education K-12. The program is designed specifically for people who have completed a bachelor's degree from a regionally accredited college or university and seek additional courses and student teaching to fulfill state certification requirements. Recognizing the unique educational backgrounds of each participant, New England College's conversion program develops an academic plan that satisfies all of the required education courses for the student's area of certification, as well as any additional courses in general education and/or content-related disciplines. In this program, it is also possible simultaneously to achieve certification and earn a Master's degree in education. Individuals interested in this program should contact the Office of Graduate and Professional Studies for more information.

Experiential Learning Component of the Education Program

The Education program has woven throughout it many opportunities for students to see theories learned in the college classroom applied in area schools and agencies. Every four credit education core course has an applied, experiential element woven into it.

- In the ED 1001 Issues in Professional Practice and School Law course students work to fill a need in an area school or agency. Students spend a minimum of 30 hours in their placement assisting educators in a variety of capacities.
- In ED 1030 Introduction to Special Education: Disabilities, Issues, and Laws students interview a range of professionals who work with students with disabilities becoming familiar with their roles and how they can help an educator working with students with disabilities while becoming familiar with different placement options.
- In ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum students visit a range of schools and classrooms to see how the curriculum is organized and taught from kindergarten through high school.
- In ED 2030 Meeting the Needs of All Learners students become familiar with case management and develop a resource notebook that they can use when they enter teaching and share with parents.
- In ED 3000 Literacy and Language Arts students develop tools to assist readers at all grades kindergarten through high school and share these tools with area educators.
- In ED 3010 Teaching Math students develop math interventions and bring these tools to students in area schools to enhance their skills in math.
- ED 4010 Methods Practicum happens right before student teaching and requires the student to spend a minimum of 15 hours a week in a school setting. In this Practicum students develop and are observed teaching four lessons and assist the cooperating teacher in a variety of ways.
- The final experience is student teaching. This is a full-time teaching experience in a school within 30 miles of campus. The student teacher assumes the role of the teacher in a tiered, cohesive, extended model. Those seeking general education student teaching will participate in their placement from mid-August up to the December holiday break, or from right after the New Year until the public school's April vacation. Those seeking dual certification will participate in their general education student teaching experience from mid-August through the end of October and then transition to their special education placement from November up to the public school's February vacation, or from right after the New Year to the end of March in the general education setting and then from the end of March to the end of the public school academic year in a special education placement.

Major

Education, B.A.

Requirements

Elementary Education and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional

education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional

Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom

working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 3010 - Teaching Math

This course provides students with the content knowledge needed to provide instruction in math. Mathematical reasoning, problem solving, and the use of various strategies and technology to help students acquire skills and knowledge associated with math literacy will be discussed. Students will also be exposed to current methods of teaching mathematics. There will be a focus on integrating mathematics into the other areas of the curriculum. Students will be required to spend time in a general education classroom working with teachers as they provide mathematic instruction including Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1000 : Issues in Professional Practice and School Law and College Level Math. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every spring. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4915 - Student Teaching: Elementary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component -*

Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites: C- or better in MT 1002 or adequate performance on the mathematics placement test. 4 Credits*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

- LAS Elective (4 Credits)

Concentration Courses

Must have a minimum of 24 credits in one concentration: English, Social Studies, Mathematics, or Science - courses to be approved by advisor.

Physical Education K-12 and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED

1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio.
Offered every semester. (1 Credit)

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for

application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4914 - Student Teaching: Physical Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

BI 1113 - General Biology - Animal Systems

The study of the anatomy and physiology of animal systems in an evolutionary and functional context. This course covers the form and function and overview of animal systems (digestion gas exchange, circulation and reproductive systems. Laboratory work involves animal anatomy and dissection. *Offered every spring (2 Credits)*

BI 1114 - General Biology - Cellular Biology

The study of basic cell biology. Emphasis is on biological molecules, cell structure and function, cellular metabolism (including cellular respiration), and other related topics. Laboratory exercises focus on basic cell biology, cellular metabolism, and microscope techniques. (*Meets the second seven weeks of every spring semester.*) Offered every spring (2 Credits)

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. In addition, specific, current examples from every region in the world will be used to understand these issues much better. (4 Credits)

- LAS Elective (4 Credits)

Content Courses

BI 2030 - Human Anatomy & Physiology I

This is the first half of an intensive two-semester course designed to introduce students to the fundamentals of human anatomy and physiology. This course focuses on the chemical and cellular principles that are essential for the proper understanding of the basic physiological

systems in humans. Topics covered include cellular structure and function, cell metabolism, and the musculoskeletal, cardiovascular, respiratory, and nervous systems. *Prerequisites:* BI 1113-BI 1114. *Offered every fall. (4 Credits)*

KI 1110 - Introduction to Kinesiology

This course will introduce the student to the discipline of kinesiology (the study of human movement), and examine its varied sub-disciplines. It is designed to serve as a foundation course for the development of potential career goals and/or directions, as well as to provide the theoretical and practical application of this multifaceted field. The student will survey and review the profession from the perspectives of history, philosophy, sociology, psychology, exercise science, current trends and issues, as well as examine factors which influence career choices and professional preparation. In KI 1110 students are introduced to the various fundamental ("big picture" or "big idea") aspects of the discipline. Majors in Kinesiology are strongly recommended to take this course in the first year of study. *Offered every year. (4 Credits)*

KI 2010 - First Aid/CPR/AED

This activity based course combines procedures for basic first aid and cardiopulmonary resuscitation skills. Topics include prevention, treatment, and recognition of injuries, open and closed wounds, burns, musculoskeletal injuries, and sudden illness, as well as skills and procedures for cardiovascular and respiratory emergencies and notifying the Emergency Management System (EMS). Use of the AED will be introduced. Practical hands-on work is required as part of the course, as well as both written and practical exams. Students may choose to seek American Red Cross (ARC) certification in Basic First Aid, and adult, child, and infant CPR upon successful completion of all course requirements meeting minimum ARC standards. This external certification includes a cost to be paid by the student. *Offered every semester. (1 Credit) ARC (American Red Cross) Certification includes a cost to be paid by the student.*

KI 2112 - Movement Instruction: Creative Movement

This skills-based course provides instruction and application of key principles and fundamentals of physical movements in rhythms and basic gymnastics. Particular focus is placed on the skill progressions appropriate in school physical education programs, after school programs, and recreation programs. Emphasis is placed on the student's ability to lead, facilitate, teach,

demonstrate, and assess a variety of rhythmic movements, and fundamental gymnastics skills such as tumbling. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140 . *Offered every year. (2 Credits)*

KI 2114 - Movement Instruction: Team Sports

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of team sports, as well as understanding and teaching of skill progressions and assessment in the specific sport movements encountered. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques and progressions designed for settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

KI 2116 - Movement Instruction: Fitness Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of fitness based activities. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied exercises and fitness activities with appropriate progressions and designed for application in settings including physical education, after school, recreation, and youth sports programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites:* KI 2140. *Offered every year. (2 Credits)*

KI 2118 - Movement Instruction: Individual and Lifetime Activities

This skill-based course provides instruction and application of pedagogical principles related to fundamental skill movements in a variety of recreational activities, both competitive and non-competitive, as well as planning and teaching of specific motor skill progressions and assessment in the specific sport and physical activity movements encountered. Activity examples include tennis, ultimate frisbee, orienteering, badminton, and golf. Emphasis is placed on the student's ability to lead, facilitate, teach, demonstrate, and assess varied motor and sport skill techniques

and progressions designed for settings including secondary physical education, after school programs, and youth and adult recreation programs. Significant practice opportunities are provided to students in each course section. Kinesiology majors are required to complete a minimum of two Movement Instruction courses. *Prerequisites: KI 2140 . Offered every year. (2 Credits)*

KI 2130 (PS 2230/SM 2130) - Psychology of Sport and Movement

This course explores the influence of psychological skills on sport/movement performance as well as the reciprocal influence of participation on the individual. The general areas examined include motivation, confidence, stress/arousal/anxiety, attention, personality, anxiety, coping, social influences, and psychobiological aspects. *Prerequisites: Minimum of 30 credits earned. Offered every spring. (4 Credits)*

KI 2140 - Motor Behavior

This course provides an overview of motor development, motor learning, and motor control. Specific focus is placed on how the brain and nervous system control movement and how new movements are learned and improved. Development of fundamental movement skills as well as applications of motor control and development to teaching and coaching of movement activities will be explored. This course includes practical components to apply key concepts introduced to the learning, evaluation, and assessment of sport and movement skills. *Offered every year. (2 Credits)*

KI 2150 - Wellness Concepts

This course enables the student to better understand, identify, analyze, and experience the role of wellness from the perspective of personal behaviors and those of a broader community or society. Various components of wellness will be explored and using self-assessments, reflections, and shared discussions, students will identify theoretical and applied knowledge of wellness related to physical activity, nutrition, and fitness and exercise. Students will examine and contrast the components of health related fitness and sport performance fitness. Recommendations for positive health-supportive activities and behaviors as well as strategies for influencing others around these behaviors and consequences will provide students with opportunities to examine individual behaviors and goals. This content will also prepare the

kinesiology major and those in other related majors with information and tools to engage in leading, facilitating, teaching, and promoting healthier behaviors in all aspects of wellness. Students will evaluate their personal movement/fitness based behaviors, and construct a personal action plan for improved wellness. *Offered every year. (4 Credits)*

KI 3180 - Biomechanics

This course provides a combined theoretical and practical experience in the application of the mechanical principles of movement. Students explore and apply the mechanical principles of physics to human movement. Particular attention is given to how one develops efficiency in various movements and to the mechanical principles for instruction of physical motor skills. The focus is on the applied science as it relates to the teaching, coaching, and training of various physical skills and activities. Students will participate in the scientific analysis of movement. The course integrates athletic and health-fitness perspectives on movement training and enables students to critique and design appropriate movement skill progressions for sport or exercise. A thorough understanding and background in anatomy is essential for successful integration into this course content. *Prerequisites: BI 2030. Offered every spring. (4 Credits)*

KI 3190 - Adaptive Physical Activity

This course provides an understanding and application (in revised simulations) of the integration of individuals with varying disabilities, learning differences, and conditions in physical activities. Students will examine and analyze various mental and physical disabilities more often found in the general population, as well as those most commonly identified in children in school settings (grades K-12). Special focus is placed on the planning process, goal setting, and modification of activities in fitness, recreation, physical education, and adaptive competitive sports, to accommodate varying disabilities and allow for participation by all individuals. These outcomes are achieved by a combination of theoretical discussion and a series of practical experiences in a gymnasium or outdoor setting. *Prerequisites: KI 1110 or SM 1510. Additional prerequisite for Physical Education majors is ED 1030. (4 Credits)*

KI 4410 - Exercise Physiology

Students explore the physiological principles related to the development of strength, flexibility and endurance and learn how to most efficiently condition the human body for physical activity.

The course integrates athletic, occupational and health-fitness perspectives on training and enables students to critique and design training or exercise programs for varied populations. Students will participate in lab-based activities, designed to illustrate key concepts and provide practice in applying techniques, which integrate exercise physiology principles in simulated and variable movement activities. *Prerequisites: BI 2030, Minimum of 60 credits earned. Offered every fall. (4 Credits)*

Theatre Education K-12 and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites: Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites: Must have taken or be in ED*

1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio.
Offered every semester. (1 Credit)

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree

identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum,

including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational

technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4916 - Student Teaching: Theatre Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required

courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites: C- or better in MT 1002 or adequate performance on the mathematics placement test. 4 Credits*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their

transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

TH 2230 - Movement for the Performer

A theatrically-oriented dance course for the performer. This course explores alternative movement forms through the use of music, masks, properties and furniture. Students participate in exercises and develop presentations in an effort to experience varying and innovative techniques through which the performer can communicate. *Offered every fall. (4 Credits)*

TH 2430 - Survey of Western Drama

A text-centered investigation of drama, the physical theatre, and modes of production from the ancient Greeks to the 21st century. *This course is offered every spring. (4 Credits)*

Content Courses

TH 1211 - Acting One - For Majors and Minors

This course is designed for the student who has a background in Acting. Emphasis is placed on taking this student deeper into the realm of playing which is at the heart of all acting. Students will participate in acting exercises, improvisation, monologues and scene study. *Offered during the first seven weeks of every spring. (2 Credits)*

TH 1220 - Production Management

Designed to provide students with a basic understanding of the process of theatrical production from conception to execution and evaluation. Particular emphasis is placed on the hierarchy and careers of the theatre, the process of designers, directors and actors and more detailed experience with the elements of stage management. *Offered during the second seven weeks of every spring. (2 Credits)*

TH 1310 - Seminar in Technical Theatre: Scenery

A concentrated course on the planning, methodology and construction of scenery for the theatre. Specific areas of study will include reading and interpreting shop drawings, basic woodworking tool use, and fundamental techniques of scenery construction. Practical application through crew

work on departmental productions is stressed and required. *Offered during the first seven weeks of every fall. (2 Credits)*

TH 1320 - Seminar in Technical Theatre: Stage Lighting

A concentrated course on modern stage lighting principles and practice. Specific areas of study include electrical theory and safety, stage lighting instruments, and distribution control. Practical application through crew work on departmental productions is stressed and required. *Offered during the second seven weeks of every fall. (2 Credits)*

TH 2210 - Character Development

An acting course that emphasizes character development through role and scene analysis. Particular emphasis is placed on the scoring of the role using a variety of exercises and journal work. *Prerequisites: TH 1210 or TH 1211. Offered the first seven weeks every fall. (2 Credits)*

TH 2440 - Production Analysis

Designed to provide students with a richer understanding of the process of theatrical production from conception to execution and analysis. This course focuses on the Theatre Department Main stage production. Through readings, discussions, and lecture, students will examine the text of the play itself as well as other plays by that particular author. We will also examine the historical, theoretical and social context surrounding the text. Particular emphasis will be on creating connections between the production and the textual and historical material. For example: A production of *Mother Courage and Her Children* would result in a course that focuses on that play, other representative plays by Bertolt Brecht and his theories on Epic Theatre. *Offered every fall. (4 Credits) May be repeated for credit.*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored.

Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 3240 - Directing

The goal of this course is to develop and discover an understanding of the responsibilities, resources and process of the theatrical artist known as the director through lecture, discussion and class exercise. This hands-on creative approach will explore the journey of the director from casting to production through exercises and scene work. *Offered every spring. (4 Credits)*

TH 3320 - The Design Process

An exploration of the process of theatrical production design (scenery, lighting, and costumes). Specific areas of study include design history, theory, and script analysis. *Offered the first seven weeks of every spring. (2 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

TH 4210 - Advanced Acting

Focused studies of a range of acting forms and techniques. Courses may include: Oral Interpretation of Literature, Acting for Film and Video and Period Styles. *Prerequisites: TH 3210. Offered every spring. (2 Credits) May be repeated for credit with different topics.*

TH 4220 - Advanced Technical Seminar

Focused studies of a range of technical topics. Courses may include: Advanced Stage Lighting, Computer Aided Drafting for the Theatre. *Prerequisites: TH 1310 and TH 1320. Offered every spring. (2 Credits) May be repeated for credit with different topics.*

Electives

- Elective (*4 Credits*)

Secondary Education: English/Language Arts and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites: Must have completed and passed the Criminal Record Check. Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2020 - Language and Grammar: Developing Powerful Speakers and Writers

This course is designed to teach students the nuances of the English language and grammar and enable them to become powerful writers. In addition to knowledge about the English language and grammar, students will acquire skills and strategies that will enable them to teach grammar effectively to students in K-12. *Offered every fall. (3 Credits)*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction,

and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites: C- or better in MT 1002 or adequate performance on the mathematics placement test. 4 Credits*

AR 1240 (CO 1240) - Learning to Look: Contemporary Art and Media

Through the exploration of significant artistic and cultural developments from the late 20th century, students will be introduced to the vocabulary, texts, audiences and technologies of visual art and new media and their interpretations. The intersection of media and fine art will be examined with special focus on pertinent issues regarding the natural and civic environments. *Offered every Fall. (4 Credits) Required of every art and communications major.*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to

think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

CW 1100 (EN 2570) - Introduction to Creative Writing

This course is a writing workshop that exposes students to the various genres of creative writing such as poetry, fiction, non-fiction and drama. This course satisfies the LAS 3 Creative Arts requirement. *This course is offered every semester. (4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In

addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Content Courses

CW 3200 - 21st Century Digital Writing

Students receive instruction in creating a professional digital-based writing project to explore a specific research-based issue relevant to their work as creative thinkers. Attention is given to ethics and public voice, professional research skill, and editing for publication. *Prerequisites: WR 1010 and CW 1100. This course is offered every other spring semester. (4 Credits)*

EN 1930 - Survey of American Literature I and II

This course compresses in one semester a survey of the works of major writers of literature and literary movements in America. Beginning with Native American voices, this course will progress through the 18th and 19th centuries to modern times. Though this course focuses on the major writers and movements, it does not ignore the importance of some unrecognized voices that have shaped American literature. *Offered every other fall. (4 Credits)*

EN 2070 (WS 2070) - Comparative Mythology

This course is an in depth study of the importance of creation myths, myths of destruction and of re-birth, quest myths of the hero, the recurring theme of the theft of fire, the importance of the goddess in earlier myths, and her relative abdication in favor of god(s) in later ones. Diverse peoples the world over seem to dream using similar archetypal images. We will examine what this fact may suggest. What could be the implications of such a phenomenon? In addition, this course will help the students decipher works of art and literary texts by identifying often obscure myth references in them. Our approach will be comparative and thematic using examples from several diverse cultures. *Offered every fall. (4 Credits)*

TH 2520 - Speech for the Performer

A concentrated course that continues the work of Character Development with particular emphasis on speech and voice work. The fundamentals of voice work including relaxation, alignment, breath awareness, and the strengthening of resonance and tone will be explored. Students will apply voice work to various classical and contemporary texts. *Offered the second seven weeks of every fall. (2 Credits)*

TH 3420 - Play Analysis

An in-depth examination of script analysis utilizing plays representative of a variety of genres and time periods. We will utilize a detailed process of evaluating a plays structure and content through the examination of triggers and heaps, stasis and intrusion, obstacle and conflict, forwards, character, images, and themes. *This course is offered every fall. (4 Credits)*

TH 3950 (EN 3950) - Shakespeare

Studies in the tragedies, comedies, history, and problem plays of William Shakespeare from the perspectives of both literature and theatre, with an emphasis on the performance of the literary work. *Offered every other fall. (4 Credits)*

- Literature Elective (Chosen in consultation with advisor to round out understanding of literature) *(4 Credits)*

Electives

- Elective *(3 Credits)*

Secondary Education: Social Studies and General Special Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified

by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to

individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

BI 1111 - General Biology - Biodiversity, Evolution and Ecology

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals, using their evolutionary history and examples relevant to humans and society. This course also covers concepts important in community structure and dynamics such as species composition, species interactions, trophic structure, and food chains. In addition, energy flow and chemical cycling will be investigated at the ecosystem level. Laboratory portion includes tree identification, biological diversity, and ecological processes. *(Meets the first seven weeks of every fall semester). Offered every Fall semester. (2 Credits)*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general

education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4919 - Student Teaching: Secondary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. Experiential Component - full-time placement in a school. *Prerequisites:* Must have completed and passed the Criminal Record Check, must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general*

education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

General Education Courses

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop

strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1015 - Number Sense

This course focuses on basic number theory; algorithms for basic operations; algebraic concepts, formulas, and functions; basic geometry concepts, relationships, and theorems; measurement; and data organization and interpretation through statistics and probability. As this course is designed to cover elements related to the teaching of mathematics, deep conceptual understanding will be enhanced through the use of manipulative, cooperative learning, and formative and summative assessments. *Prerequisites:* C- or better in MT 1002 or adequate performance on the mathematics placement test. *4 Credits*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to

think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought &

process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

ES 1110 - Environmental Science: A Global Concern

This course covers a broad range of current environmental problems including population growth, global climate change, famine and food resources, and the loss of biodiversity. The laboratory portion of this course provides students with hands-on, field and laboratory experiences that introduce a variety of methods and techniques for examining the natural environment. *Offered every semester. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

Content Courses

AR 2520 - Survey of Western Art

Through focused examination of key works of art and architecture, this course explores the ways in which social, cultural, religious, political and aesthetic values have been expressed in Western society since antiquity. Students will develop a deeper understanding of connections, issues and influences across time periods and cultures. Projects and papers assigned will allow students to demonstrate their understanding of these connections, as well as to clearly articulate the characteristics, both culturally and aesthetically, of a particular historical time and place. Students will build and reinforce their familiarity with the vocabulary and media of art and architecture as well as continue to develop their visual analysis and critical thinking skills. *(4 Credits) Strongly recommended for all art majors. Fulfills LAS6 requirement.*

EC 2110 - Introduction to Macroeconomics

The study and analysis of national income accounting, income determination, Business Cycles, employment, price level and inflation, money and monetary policy, fiscal policy, government budgets and deficits, international trade, exchange rates, and the theory of economic growth. Special attention will be given to global macroeconomic aspects, application of macroeconomic theories to economic affairs, critical evaluation of policies, as well as current economic issues, conditions, and trends. *(4 Credits)*

HS 1150 - World Civilization

Despite the apparent success of the West in the last half millennium, much of the world's achievements began or were sustained in non-Western cultures. The pre-Columbian Maya and Inca, the succession of peoples along the banks of the Tigris, Euphrates and Nile and of course China have all made remarkable contributions to the modern world as we know it long before Europeans could read or write. *(4 Credits)*

HS 2040 (PO 2040) - Research Methods

This course awakens the apprentice historian to the various methodologies of the historical profession. We will explore the elements of research: sources, analysis and argument, and practice the historian's craft: research, professional writing and oral (conference style) presentation. *(2 Credits)*

HS 3080 - Major Problems in Modern America

This seminar will examine the various themes and problems in American history and culture from the end of Reconstruction to the very near past. Problems and ideas in gender, race, environment, war, popular culture, politics and more will be explored through various modes of historical inquiry and analysis. Each student, in concert with the faculty mentor, will design and complete a problem-based individual learning plan. *(4 Credits)*

PO 1110 - U.S. Politics

Democracy in the U.S. is evaluated through analyses of the major institutions, processes, and policies of the national government. Power, inequality, political culture, social movements, the Constitution, elections, the role of the media, and the parts played by the President, the bureaucracy, the Congress, and the courts are all considered. *(4 Credits)*

PO 1510 - International Politics

The international political system and the forces affecting it are evaluated, with emphasis on the role of the nation-state. This course introduces the components of national power: political, economic, social, geographic, and population; and analyses of the aims, purposes, and objectives underlying the foreign policies of the states and the tools, techniques, and strategies used in the promotion of these goals in the international arena. *(4 Credits)*

PO 3450 - U.S. Foreign Policy

This course provides student with an opportunity to analyze American foreign policy from the perspectives of both domestic American politics and international relations. Policy with reference to the Soviet Union, the Third World, political and military allies, nuclear and conventional weapons, international organizations and human rights are considered. *(4 Credits)*

PS 1110 - Introduction to Psychology

An introduction into the study of Psychology from the biological basis of brain development and functions, history and theories that helped to bring the science to where it is now. It includes aspects of human development, cognition, perception, memory, learning, social behavior, abnormal behaviors and treatments. This course will give you a taste of why people are how they are and get you started into investigating more about the science of Psychology. This course satisfies the LAS 4 Social Sciences requirement. *Offered every semester (4 Credits)*

Secondary Education: Life Sciences and General Education Certification

Education Courses

ED 1000 - Issues in Professional Practice and School Law

This course will provide a broad view of the teaching profession and schools from a systems perspective. Students will become familiar with the qualities of effective teaching as identified by Charlotte Danielson in *Enhancing Professional Practice: A Framework for Teaching*. Using service-learning as a pedagogy, students will apply the knowledge from this course in a general education setting to identify a need in a school, research that need, implement a program to meet the need, and assess their effectiveness in that role. Issues that will be covered in this course include but are not limited to organizational structure and funding, education and culture, educational systems in various parts of the world and the United States, legal issues associated with schools, the importance of education, and the factors impacting our schools. *Prerequisites:* Must have completed and passed the Criminal Record Check. Fall first year: Must have completed the CORE Academic Skills Test through ETS in order to take the course fall semester. Spring first year: Open to all students. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general ed included - minimum of 3 hours a week for 14 weeks.*

ED 1010 - Portfolio I

This course is designed to introduce students to the process of creating an electronic portfolio to be used as a vehicle to display competency in relation to the State of New Hampshire certification standards. Students will review the state standards: general education, professional education, and their major standards, and begin the process of understanding how those

standards are connected to the profession. *Prerequisites:* Must have taken or be in ED 1000 Issues in Professional Practice and School Law. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 1020 - Psychology of Learning and Classroom/School Environment

This course examines the practical implications of best practices in education and learning theory. Particular emphasis will be placed on theories of learning, growth, and development, intelligence, motivation, evaluation, interpersonal relationships, and advances in brain-based learning and neuropsychology. Students will critically assess educational models and programs and use this information to critically assess current practices in teaching. *Offered every fall and spring. (3 Credits)*

ED 1030 - Introduction to Special Education: Disabilities, Issues, and Laws

The primary goal of this course is to increase the student's awareness of and sensitivity to individuals with special needs. In this course students will examine and become familiar with the laws relating to special education, the characteristics of various exceptionalities, the pre-referral, referral, and identification process, resources available to support learners, the roles of different related service personnel, the role of a paraeducator, how to work effectively as a team member with general education and other members of the special education team. Students will be expected to apply the knowledge from this course in a special education setting and reflect on what they are learning in the college classroom to what they are seeing in a school setting. *Prerequisites:* Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2000 - Technology and Information Literacy

This course prepares students with the theory and practice of effectively integrating technology and technology applications into the elementary and secondary classroom. Students will be versed in a variety of technology skills, tools, and applications as they relate to teaching, learning, and assessment. Strategies will be explored in developing technology skills in using these resources in the classroom setting. Safe, ethical and legal issues will also be addressed.

Prerequisites: Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (2 Credits)*

ED 2010 - Curriculum Design, Planning, Instruction, and Assessment Across the Curriculum

This course provides the student with an opportunity to acquire knowledge of and demonstrate competence in a variety of curricula in K-12 schools and plan, deliver, and evaluate instruction across the curriculum. There will be an emphasis on the Common Core and other content specific standards and how they become the driving force for lesson planning and assessment. The Understanding By Design model will be used to guide students in developing lessons that can be taught with small groups of learners, in this case in a special education setting. The curriculum in all content areas will be discussed and the integration of curriculum to enhance student learning and authentic forms of assessment will be a focus. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks.*

ED 2030 - Meeting the Needs of All Learners

In this course students become familiar with the role of the case manager and who constitutes the team, due process, who is a qualified examiner, and various placement options. In addition, the course helps students develop skills to implement an IEP/IFSP/Transition Plan, use data to inform decisions about the education of students and to make modifications to the curriculum, including instruction, assessment, and behavioral strategies for all students, find resources to support all learners and develop tools to assess learning and monitor and communicate student growth. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law and ED 1030: Introduction to Special Education: Disabilities, Issues, and Laws. Must have completed and passed the Criminal Record Check. *Offered every Spring. Requires a Practicum Contract with all signatures provided. (4 Credits) Experiential Component - applied in special education included - minimum of 3 hours a week for 14 weeks.*

ED 2050 - Portfolio II

The purpose of this course is to continue to assist students in the development of their professional portfolio. In this course students will add to and justify work from courses and practical experiences as they relate to certification standards and prepare their portfolio for application to the major. *Prerequisites:* Must have taken or be in ED 1010 Portfolio I. Must have an active subscription to eFolio. *Offered every semester. (1 Credit)*

ED 3000 - Literacy and Language Arts

In this course students will investigate how learning to read and write is a developmental process requiring exposure to oral language and listening experiences. Students will explore current research on how the brain learns to read. Best methods for facilitating an effectively balanced and integrated literacy program will be discussed. There will be an emphasis on phonemic awareness, phonics, vocabulary, fluency, and comprehension. Strategies for reading in the content area such as how to access textbooks and other written material will be discussed. Students will also explore how reading problems occur, how to carry out diagnostic procedures in the classroom, how to determine students strengths and needs in relation to reading and how to implement corrective instruction. Students will spend time in a general education classroom working closely with a teacher or teachers who are providing instruction in reading and Response to Intervention instruction. *Prerequisites:* Must have successfully completed ED 1001: Issues in Professional Practice and School Law. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 3 hours a week for 14 weeks. *Offered every fall. Requires a Practicum Contract with all signatures provided. (4 Credits)*

ED 4000 - Methods of Instruction Across the Curriculum

In this course students will learn to use data to inform instructional planning, plan lessons with the end in mind, identify the criteria for success, plan assessments that will allow them to determine the degree to which their students are meeting with success, identify best practices and alternatives for teaching those lessons, deliver lessons and reflect on the success of the lesson while determining the degree to which students have met with success and what the next steps in planning would be. There will be a focus on integrating all content areas as well as an understanding of the breadth of the curriculum as it extends from K - 12. A thematic unit will be developed in this course. *Prerequisites:* Must have successfully completed ED 1000: Issues in Professional Practice and School Law and ED 2010 Curriculum Design, Planning, Instruction,

and Assessment Across the Curriculum. *Offered every fall. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4010 - Methods Practicum

Students enrolled in this course are required to spend a minimum of 15 hours a week in a general education setting. A college supervisor will hold an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. In addition, the student will develop and teach a minimum of 4 lessons using the NEC lesson plan format based on Understanding By Design. Students will develop their skills as professional educators and become even more familiar with the breadth of the curriculum and vast array of instructional strategies. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have been accepted into the major and completed all education core courses or be taking the last of the education core courses. Must have no more than two upper level content courses remaining. Must have completed and passed the Criminal Record Check. Experiential Component - applied in general education included - minimum of 15 hours a week for 14 weeks. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (3 Credits)*

ED 4919 - Student Teaching: Secondary Education

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college

supervisor to do so. Experiential Component - full-time placement in a school. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

ED 4913 - Student Teaching: General Special Education K-12

Each student seeking certification is involved in a full-time student teaching experience. The student teacher cooperates in all phases of the school's program: lesson planning, teaching, multidisciplinary teams, development of instructional materials, effective use of educational technology, teachers' meetings, in-service opportunities, extra-curricular activities, and involvement in student activities. Student teachers follow the calendar of the school to which they are assigned and are expected to participate in all phases of the schools' activities. Student teachers plan with their cooperating teacher and then develop detailed lesson plans for every lesson taught. A college supervisor will conduct three triad meetings - an initial triad meeting to set expectations, a middle of the semester triad meeting to evaluate progress using the Danielson Pre-service Teacher rubric, and then a final triad at the end to evaluate readiness for student teaching. Those seeking permission to participate in both a general education and special education student teaching experience must demonstrate competence in the elements on Danielson's rubric and outstanding professionalism and be recommended by their college supervisor to do so. *Prerequisites:* Must have completed and passed the Criminal Record Check , must have been accepted into the education major, must have completed all other required courses. No other courses are taken during student teaching. *Offered every fall and spring. Requires a Practicum Contract with all signatures provided. (6 - 12 Credits depending on whether a single certification or dual certification) Requirements: Experiential Component - Full-time placement in a school - Fall: Mid-August up to the Christmas Holiday break if general education certification; mid-August up to February vacation break if general education and special education certification. Spring: Right after the New Year up to April vacation if general education certification; Right after the New Year to the end of the public school academic year if general education and special education certification.*

WR 1010 - Composition

An evidence-based, writing intensive course designed to improve critical thinking, reading, and writing proficiencies through guidance in a variety of academic formats. Students will develop strategies for turning their experience, observations, and analyses into evidence suitable for academic writing. Over the course of the semester, students will build upon their critical thinking skills to learn the processes necessary for gathering and incorporating research material in their writing. With an emphasis on civics and the natural environment, students will learn how to evaluate, cite, and document primary and secondary research sources, as well as how to develop arguments and support them with sound evidence. *(4 Credits)*

MT 1510 - Precalculus

This course will focus on analysis and applications of algebraic and transcendental functions. Topics include: linear and quadratic functions, polynomial functions, rational functions, exponential and logarithmic functions, and trigonometric functions, inequalities, graphical analysis, and an introduction to analytic geometry. Applications of these topics include: rates of change, optimization, logarithmic or exponential modeling, and trigonometric functions. This course satisfies the Quantitative Literacy requirement. *Prerequisites: C- or better in MT 1020 or adequate performance on the mathematics placement test. (4 Credits)*

LAS 1000 - Bridges to Learning

This two-credit course introduces students to a range of experiences that will facilitate their transition to the academic, social, and community life at New England College. During the course, students will be asked to engage in a variety of activities: group discussions, self-assessments, reflective writing, and other interactive experiences, including a Bridges project. These experiences will connect students to NEC's community resources and encourage them to think more about their life, skills, goals, and what it means to live and learn in the context of our rich liberal arts environment. *(2 Credits)*

LAS 1 (LAS 1110) - The Natural Environment - Understanding Our Place in the Natural World

An Introduction to the Art of Questioning

In LAS 1 students will be asked to become attentive to the natural world as more than a backdrop to human activity. By understanding nature as a living community of which we are a part, we can begin to appreciate how our relationship to it is vital, not only for our material survival, but for the recognition of our own humanity.

For this first seminar in the Liberal Arts & Sciences, students will engage in the kind of open-ended thinking that defines the liberal arts and sciences, thereby gaining a foundation for the kind of critical and reflective skills they will need as they continue their course of study in the LAS Core Curriculum and their majors. Using a multidisciplinary approach, seminars will explore the sciences, literature, art, and philosophies of nature in order to better understand our place in the Natural world.

Within the framework of a developmental pedagogy, writing will be intensive, but the emphasis will be formative. Students will be assessed with a set of criteria that are developmental in nature. LAS 1 is designated as a writing-intensive General Education seminar. *(4 Credits)*

PS 2160 - Life-Span Development

Humans all begin in the same manner and develop in a similar pattern physically, cognitively, and emotionally when all the elements are perfect. In this course we look at that development from conception through the end of life in a quick overview of what it takes to become the people we know or want to be. We look at the aspects of life that make things work properly as well as the things that could cause life to go in a different direction. This course includes theories of physical, psychological development, learning, social and environmental factors that influence the growth of a people throughout their life times. This course satisfies the LAS 4 Social Sciences requirement. *(4 Credits)*

ED 2090 LAS 2140 The Humanities - Literature in the 21st Century: Exploring Literature for Youngsters, Adolescents, and Young Adults

In this course students will explore and analyze a variety of contemporary literature genres (poetry, fiction, non-fiction), in the context of content areas to which children, adolescents, and young adults are currently exposed. Through reading, analysis and critical evaluation, students will use a variety of forms of communication, including writing, speaking, and listening to convey the essence of the literature to share this with students within the class and beyond. *Offered every spring. (4 Credits)*

HS 1130 - Evolution of American Democracy

This survey of American history derives its narrative from the perspectives of political thought & process, as well as the concurrent developments in economics and culture. The course begins amidst the turmoil of the early modern Scientific Revolution and the Protestant Reformation and traces the development of the sovereignty of the people from 16th century Europe to the electoral landscape of 21st century America. *(4 Credits)*

ED 2080 LAS 2110 The Creative Arts - Creative Writing and Creative Expression

In this creative writing and performance-based course, students will be exposed to the innovative creative process of the human experience. Students will explore and examine a variety of art forms to elaborate on their writing and use performance to illustrate their knowledge of the craft and skills in the creative arts. This course embraces the process of conception, execution, and analysis. Students will apply what they have learned in a final production and create a portfolio of their journey through the course where they systematically and thoughtfully analyze each step they have taken. *Offered every fall. (4 Credits)*

PO 3210 - Global Issues

This course will look at the major issues facing the countries of the world today. The issues that will be discussed in detail will include globalization, development, human rights, the environment, weapons proliferation, terrorism, WMD, sweatshops and ethnic conflict. In addition, specific, current examples from every region in the world will be used to understand these issues much better. *(4 Credits)*

- LAS Elective *(4 Credits)*

Content Courses**BI 1111 - General Biology - Biodiversity, Evolution and Ecology**

This course module examines the biology, ecology, and evolutionary relationships among living organisms. A survey of life forms will include prokaryotes, protists, fungi, plants and animals,
